### List of Validated Qualifers

For organics:

"NULL" Detected concentration value

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a "tentative identification."
- NJ The analysis indicates the presence of an analyte that has been "tentatively identified" and the associated numerical value represents its approximate concentration.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

### For inorganics:

"NULL" Detected concentration value.

- J The associated value is an estimated quantity.
- U The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.
- UJ The material was analyzed for, but was not detected.

  The associated value is an estimate and may be inaccurate or imprecise.
- R The data was unusable. (Note: Analyte may or may not be present.).

### NOTES:

\*Formula for Relative Percent Difference (RPD)

Source: p. 921 of http://www.epa.gov/region02/desa/hsw/clp.pdf

**RPD** = | SR - SDR | X 100 SR = Sample Result of a particular analyte.

(1/2) (SR + SDR) SDR = Sample Duplicate Result of a particular analyte.

Shading indicates RPD > 50%

U = not detected to the limit indicated

NJ = reported value is estimated and tentatively identified based on mass spec

J = reported value is estimated

UJ = not detected to the estimated limit indicated

R = result is rejected

NA = Not Applicable, i.e. result rejected or missing result

### NOTES:

\*Formula for Relative Percent Difference (RPD)

Source: p. 921 of http://www.epa.gov/region02/desa/hsw/clp.pdf

**RPD** = | SR - SDR | X 100 SR = Sample Result of a particular analyte.

(1/2) (SR + SDR) SDR = Sample Duplicate Result of a particular analyte.

Shading indicates RPD > 50%

U = not detected to the limit indicated

J = reported value is estimated

UJ = not detected to the estimated limit indicated

### NOTES:

\*Formula for Relative Percent Difference (RPD)

Source: p. 921 of http://www.epa.gov/region02/desa/hsw/clp.pdf

**RPD** = | SR - SDR | X 100 SR = Sample Result of a particular analyte.

(1/2) (SR + SDR) SDR = Sample Duplicate Result of a particular analyte.

Shading indicates RPD > 50%

U = not detected to the limit indicated

J = reported value is estimated

UJ = not detected to the estimated limit indicated

R = result is rejected

NA = Not Applicable, i.e. result rejected or missing result

### NOTES:

\*Formula for Relative Percent Difference (RPD)

Source: p. 921 of http://www.epa.gov/region02/desa/hsw/clp.pdf

 $\mathbf{RPD} = \underline{\mid \mathsf{SR-SDR} \mid \mathsf{X}\ 100} \qquad \qquad \mathsf{SR} = \mathsf{Sample}\ \mathsf{Result}\ \mathsf{of}\ \mathsf{a}\ \mathsf{particular}\ \mathsf{analyte}.$ 

(1/2) (SR + SDR) SDR = Sample Duplicate Result of a particular analyte.

Shading indicates RPD > 50%

U = not detected to the limit indicated

J = reported value is estimated

UJ = not detected to the estimated limit indicated

R = result is rejected

NA = Not Applicable, i.e. result rejected or missing result

### NOTES:

\*Formula for Relative Percent Difference (RPD)

Source: p. 921 of http://www.epa.gov/region02/desa/hsw/clp.pdf

**RPD** = | SR - SDR | X 100 SR = Sample Result of a particular analyte.

(1/2) (SR + SDR) SDR = Sample Duplicate Result of a particular analyte.

Shading indicates RPD > 50%

U = not detected to the limit indicated

J = reported value is estimated

UJ = not detected to the estimated limit indicated

R = result is rejected

NA = Not Applicable, i.e. result rejected or missing result

### NOTES:

Source: p. 921 of http://www.epa.gov/region02/desa/hsw/clp.pdf

**RPD** = | SR - SDR | X 100 SR = Sample Result of a particular analyte.

(1/2) (SR + SDR) SDR = Sample Duplicate Result of a particular analyte.

Shading indicates RPD > 50%

U = not detected to the limit indicated

NJ = reported value is estimated and tentatively identified based on Mass Spec

J = reported value is estimated

UJ = not detected to the estimated limit indicated

R = result is rejected

NA = Not Applicable, i.e. result rejected or missing result

<sup>\*</sup>Formula for Relative Percent Difference (RPD)

#### NOTES:

\*Formula for Relative Percent Difference (RPD)

Source: p. 921 of http://www.epa.gov/region02/desa/hsw/clp.pdf

**RPD** = | SR - SDR | X 100 SR = Sample Result of a particular analyte.

(1/2) (SR + SDR) SDR = Sample Duplicate Result of a particular analyte.

Shading indicates RPD > 50%

U = not detected to the limit indicated

J = reported value is estimated

UJ = not detected to the estimated limit indicated

R = result is rejected

NA = Not Applicable, i.e. result rejected or missing result

---- = No difference between results or both results were non-detect

#### NOTES:

Shaded cells indicate a detect/non-detect pair. Concentrations reported as not detected in the shaded pair, as indicated by "U" or "U" data qualifiers, are presented at 1/2 the value reported by the laboratory. The modified value (i.e., 1/2 the laboratory's reported detection limit) was used to compute the average result.

When a chemical was not detected in either the sample or the duplicate, as indicated by "U" or "U" data qualifiers, the average of the two reported detection limits at full value is reported as the final value.

#### NOTES:

Shaded cells indicate a detect/non-detect pair. Concentrations reported as not detected in the shaded pair, as indicated by "U" or "UJ" data qualifiers, are presented at 1/2 the value reported by the laboratory. The modified value (i.e., 1/2 the laboratory's reported detection limit) was used to compute the average result.

When a chemical was not detected in either the sample or the duplicate, as indicated by "U" or "UJ" data qualifiers, the average of the two reported detection limits at full value is reported as the final value.

#### NOTES:

Shaded cells indicate a detect/non-detect pair. Concentrations reported as not detected in the shaded pair, as indicated by "U" or "UJ" data qualifiers, are presented at 1/2 the value reported by the laboratory. The modified value (i.e., 1/2 the laboratory's reported detection limit) was used to compute the average result.

When a chemical was not detected in either the sample or the duplicate, as indicated by "U" or "UJ" data qualifiers, the average of the two reported detection limits at full value is reported as the final value.

#### NOTES:

Shaded cells indicate a detect/non-detect pair. Concentrations reported as not detected in the shaded pair, as indicated by "U" or "UJ" data qualifiers, are presented at 1/2 the value reported by the laboratory. The modified value (i.e., 1/2 the laboratory's reported detection limit) was used to compute the average result.

When a chemical was not detected in either the sample or the duplicate, as indicated by "U" or "UJ" data qualifiers, the average of the two reported detection limits at full value is reported as the final value.

#### NOTES

Shaded cells indicate a detect/non-detect pair. Concentrations reported as not detected in the shaded pair, as indicated by "U" or "UJ" data qualifiers, are presented at 1/2 the value reported by the laboratory. The modified value (i.e., 1/2 the laboratory's reported detection limit) was used to compute the average result.

When a chemical was not detected in either the sample or the duplicate, as indicated by "U" or "UJ" data qualifiers, the average of the two reported detection limits at full value is reported as the final value.

#### NOTES:

Shaded cells indicate a detect/non-detect pair. Concentrations reported as not detected in the shaded pair, as indicated by "U" or "UJ" data qualifiers, are presented at 1/2 the value reported by the laboratory. The modified value (i.e., 1/2 the laboratory's reported detection limit) was used to compute the average result.

When a chemical was not detected in either the sample or the duplicate, as indicated by "U" or "UJ" data qualifiers, the average of the two reported detection limits at full value is reported as the final value.

#### NOTES:

Shaded cells indicate a detect/non-detect pair. Concentrations reported as not detected in the shaded pair, as indicated by "U" or "UJ" data qualifiers, are presented at 1/2 the value reported by the laboratory. The modified value (i.e., 1/2 the laboratory's reported detection limit) was used to compute the average result.

When a chemical was not detected in either the sample or the duplicate, as indicated by "U" or "UJ" data qualifiers, the average of the two reported detection limits at full value is reported as the final value.

#### NOTES:

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate

#### NOTES:

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate

#### NOTES:

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate

#### NOTES:

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate

#### NOTES

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate

#### NOTES

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.

- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate

U = compound was not detected

#### NOTES:

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate

#### NOTES:

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate

#### NOTES:

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate

#### NOTES

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample DRMO-4008 and its duplicate DRMO-4005 at Loc ID SDDRMO-8.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process

#### NOTES

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 199
- 4) The maximum detected concentration was obtained from the average of the sample DRMO-4008 and its duplicate DRMO-4005 at Loc ID SDDRMO-8.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process

- 1) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004
- 2) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 199-
- U = compound was not detected
- J = the reported value is an estimated concentration
  UJ = the compound was not detected; the associated reporting limit is approximat
- R = the data was rejected in the data validating process
  NJ = compound was "tentatively identified" and the associated numerical value is approximated to the compound was "tentatively identified" and the associated numerical value is approximated.

- 1) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004
- 2) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 199
- U = compound was not detected
- J = the reported value is an estimated concentration
  UJ = the compound was not detected; the associated reporting limit is approximat
- G = the compound was not elected, the associated reporting mint is approximat

  R = the data was rejected in the data validating proces:

  NJ = compound was "tentatively identified" and the associated numerical value is approxima

- 1) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 200-2) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 199-
- U = compound was not detected
- J = the reported value is an estimated concentration
  UJ = the compound was not detected; the associated reporting limit is approximat
- O3 the Compound was not detected, the associated reporting mint is approximat
  R = the data was rejected in the data validating proces
  NJ = compound was "tentatively identified" and the associated numerical value is approximately

#### NOTES:

- 1) Sample-duplicate pair was averaged and the average results were used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Tap Water (October 2004)
- 3) Lowest Groundwater Criteria Values came from the following:
- A) NYSDEC Class GA Groundwater Standard (TOGS 1.1.1, June 1998)
- B) Maximum Contaminant Level Drinking Water Standards and Health Advisory (EPA 822-B-00-001)
- C) Secondary Drinking Water Regulations Drinking Water Standards and Health Advisory (EPA 82-B-00-001)
- 4) The maximum detected concentration was obtained from the average of the sample-duplicate pair: EB153/EB023 at MW121C-1.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate

#### NOTES

- 1) Sample-duplicate pair was averaged and the average results were used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Tap Water (October 2004)
- 3) Lowest Groundwater Criteria Values came from the following:
- A) NYSDEC Class GA Groundwater Standard (TOGS 1.1.1, June 1998)
- B) Maximum Contaminant Level Drinking Water Standards and Health Advisory (EPA 822-B-00-001)
- C) Secondary Drinking Water Regulations Drinking Water Standards and Health Advisory (EPA 82-B-00-001)
- 4) The maximum detected concentration was obtained from the average of the sample-duplicate pair: 121C-2004/121C-2002 at MW121C-4.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process

#### NOTES

- 1) Sample-duplicate pair was averaged and the average results were used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Tap Water (October 2004)
- 3) Lowest Groundwater Criteria Values came from the following:
- A) NYSDEC Class GA Groundwater Standard (TOGS 1.1.1, June 1998)
- B) Maximum Contaminant Level Drinking Water Standards and Health Advisory (EPA 822-B-00-001)
- C) Secondary Drinking Water Regulations Drinking Water Standards and Health Advisory (EPA 82-B-00-001)
- 4) The maximum detected concentration was obtained from the average of the sample-duplicate pair: 121C-2004/121C-2002 at MW121C-4.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process

#### NOTES:

- 1) Sample-duplicate pair was averaged and the average results were used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Tap Water (October 2004)
- 3) Lowest Groundwater Criteria Values came from the following:
- A) NYSDEC Class GA Groundwater Standard (TOGS 1.1.1, June 1998)
- B) Maximum Contaminant Level Drinking Water Standards and Health Advisory (EPA 822-B-00-001)
- C) Secondary Drinking Water Regulations Drinking Water Standards and Health Advisory (EPA 82-B-00-001)
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate pairs:
- DRMO-2005/DRMO-2008 collected April 2003 from MW-1 and DRMO-2013/DRMO-2019 collected May 2003 from MW-1.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process

#### NOTES:

- 1) Sample-duplicate pair was averaged and the average results were used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Tap Water (October 2004)
- 3) Lowest Groundwater Criteria Values came from the following:
- A) NYSDEC Class GA Groundwater Standard (TOGS 1.1.1, June 1998)
- B) Maximum Contaminant Level Drinking Water Standards and Health Advisory (EPA 822-B-00-001)
- C) Secondary Drinking Water Regulations Drinking Water Standards and Health Advisory (EPA 82-B-00-001)
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate pairs:

DRMO-2005/DRMO-2008 collected April 2003 from MW-1 and DRMO-2013/DRMO-2019 collected May 2003 from MW-1.

- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process

#### NOTES

- 1) Sample-duplicate pair (DRMO-3008/DRMO-3005) collected from SWDRMO-8 was averaged and the average results were used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Tap Water (October 2004)
- 3) Action Levels are from the New York State Ambient Water Quality Standards, Class C for Surface Water.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate

#### NOTES

- 1) Sample-duplicate pair (DRMO-3008/DRMO-3005) collected from SWDRMO-8 was averaged and the average results were used in the summary statistic presented in this tabl
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Tap Water (October 2004)
- 3) Action Levels are from the New York State Ambient Water Quality Standards, Class C for Surface Water.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate

#### NOTES:

- 1) Sample-duplicate pairs were averaged and the average results was used in the summary statistic presented in this table.
- 2) The criteria value source is the Region IX Preliminary Remediation Goals for Residential Soil (October 2004)
- 3) The criteria value source is NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- 4) The maximum detected concentration was obtained from the average of the sample and its duplicate.
- U = compound was not detected
- J = the reported value is an estimated concentration
- UJ = the compound was not detected; the associated reporting limit is approximate
- R = the data was rejected in the data validating process
- NJ = compound was "tentatively identified" and the associated numerical value is approximate
