SUBJECT: OB/OD Grounds Second Quarter 1998 Groundwater Monitoring
Seneca Army Depot Activity, Romulus, New York

Dear Mr. Absolom:

The attached report summarizes the groundwater monitoring results at the OB/OD Grounds for the Second Quarter 1998. The work for this quarter of groundwater monitoring was performed in accordance with the requirements of Delivery Order 0006, Optional Task 2 under Contract DACA87-95-D-0031.

Field Activities

A round of groundwater elevations were obtained from 35 monitoring wells at the OB/OD Grounds Groundwater samples were collected from seven wells using EPA Region II low-flow sampling procedures for TAL Metals analysis. The samples were not filtered in the field prior to collection. Four replicates samples were also collected at each well for TOC, TOX, pH and Specific Conductivity analyses in accordance with the requirements of 40 CFR 265 Subpart F.

Groundwater Elevation Data

Mean Sea Levels (MSL) elevations were obtained from the 35 wells on June 21, 1998. **Table 1** summarizes the results of the groundwater elevation measurements. Groundwater isocontours developed for the OB Grounds indicates a flow direction to the northeast with a hydraulic gradient of approximately 0.012. Groundwater isocontours developed for the OD grounds indicates a flow direction to the northeast. **Figures 1** and **2** show the groundwater isocontours developed for each area.

Analytical Results

Four replicate samples from each of the seven monitoring wells were analyzed for the standard indicator parameters of pH, Specific Conductivity, Total Organic Carbon, and Total Organic Halides (TOX). One sample from each monitoring well was also analyzed for TAL metals. **Tables 2** and **3** summarize the analytical results for the indicator compounds. The validated TAL Metals analytical results are presented in **Table 4.** The analytical results were validated in accordance with the NYSDEC Data Validation SOPs. The validated analytical results indicate that all data is acceptable.

Student's t-Test Analysis

A statistical analysis was performed on the indicator parameter data from the OB/OD Grounds using the Student's t-Test. The analysis was performed in accordance with 40 CFR 265 Subpart F and U.S. EPA SW-963, revised 1983. The analysis results are shown in **Table 7**.

The Student's t-Test results indicated that there were statistically significant increases at the OB Grounds for pH in MW-12, MW-14 and MW-27, and TOC in MW-14, and specific conductance in MW-14.. At the OD Grounds, the Student's t-Test indicated that there were significant increases of TOC and TOX at the upgradient well (MW45-4) and the two downgradient wells (MW45-2 and MW45-3), pH in MW45-3, and Specific Conductance in MW45-2 and MW45-3.

A review of the data shows that the actual values measured for TOX were non-detect (0.02U) in all wells including the background wells for this quarter of sampling as well as previous quarterly sampling. It is reasonable to conclude that there was no actual increase in concentrations as compared to background, as measured by TOX. Similarly, the variations in actual pH, conductivity and total organic carbon data were relatively small as compared to previous sampling rounds. The historical indicator parameter data shown in **Table 5** and **Table 6** shows that these "statistically significant" changes are most likely due to natural variations (seasonal) in the groundwater quality and not from any continuing releases to groundwater from either the OD or the OB Grounds. Also, the TAL metals data does not indicate any real increases in actual metals concentrations from previous sampling episodes. The close spatial distribution of the monitoring data around the mean (sample variance) and the associated errors in measurements (10-20%) may account for the statistical increases indicated by the Student's t-Test. Based upon professional judgment, these statistical increases do not indicate releases from the OB/OD Grounds.

In summary, the groundwater monitoring results for OB/OD Grounds for the Second Quarter 1998, continue to indicate no adverse impacts to groundwater in these areas.

pad heaved + at an angle, lock was unlocked, no plastic lid, lock does not work

1140 MW-30 WL = 4.25'
pad heaved + broken into large chunks,

1145 MW-13 WL = 3.60'
pad heaved + at an angle, inner casing raised above top of outer casing

6/21/98

1155 MW-1 WL = 7.36'
no pad

1203 MW-31 WL =
pad broken + heaved 1 ft., cannot take off lock

1207 MW-29 WL =
pad heaved 1 ft., inner casi higher than outer, but meta cover is partially on + locked, take lock off

1212 MW19 WL =
pad broken in large chunks, could not take off lock

1217 MW8 WL = 3.84'
pad in good cond, no lock or plastic cover

1232 ? WL = 7.51'
cannot read stamp

1235 Break for lunch

1255 MW-45-2 pad + well in good cond. WL = 10.16'

1300 MW45-3 cannot read stamp, pad + well in good cond. WL = 7.76'
