1 INTRODUCTION

This report summarizes results of the First Quarter 2003 (1Q 2003) groundwater sampling and monitoring activities at the Ash Landfill Operable Unit (Ash Landfill) at the Seneca Army Depot Activity (SEDA), Romulus, New York. The goal of groundwater monitoring at the Ash Landfill is to monitor the extent of the well-defined chlorinated ethene contaminant plume at this operable unit and to determine the effectiveness of the existing iron reactive barrier, also known as the permeable reactive barrier (PRB). This work was performed in accordance with the requirements of Delivery Order 0010 of Contract DACA87-02-D-005.

Historic groundwater data is combined with information collected during the 1Q 2003 sampling event to evaluate flow and chemistry in the shallow groundwater aquifer at the Ash Landfill. **Section 2.0** provides a summary of quarterly monitoring activities, **Section 3.0** provides a summary of monitoring results, and **Section 4.0** summarizes the results and conclusions drawn from the 1Q 2003 sampling and monitoring event.

1.1 SITE BACKGROUND

The Ash Landfill site was initially estimated to encompass an area of approximately 130 acres at the SEDA. This larger area was investigated to ensure that no previously unknown waste disposal areas were overlooked. Following the remedial investigation (RI), the area of the Ash Landfill site was refocused to an area of approximately 23 acres. This area is comprised of five Solid Waste Management Units (SWMUs) including: the Ash Cooling Pond (SEAD-3), the Ash Landfill (SEAD-6), the Non-Combustible Fill Landfill (NCFL) (SEAD-8), the Refuse Burning Pits (SEAD-14), and the Abandoned Solid Waste Incinerator Building (SEAD-15). SEAD-14 is also known as the Debris Piles. The Ash Landfill (SEAD-6) also includes a groundwater plume that emanates from the northern western side of the landfill area.

A non-time critical removal action, also known as an interim remedial measure (IRM), was conducted by the Army between August 1994 and June 1995, under the requirements of the CERCLA. Only soils within the area known as the "Bend in the Road" were excavated and treated. Soil within the area was identified during the RI as the source of groundwater contamination. The IRM consisted of excavation and thermal treatment of volatile organic compounds (VOCs) impacted soils using the Low Temperature Thermal Desorption (LTTD) process. The objectives of the IRM were to thermally treat VOCs and polycyclic aromatic hydrocarbons (PAHs) in soils at two source areas near the "Bend in the Road" where sampling identified elevated concentrations of VOCs and PAHs. The IRM thermal treatment project provided a positive benefit for the long-term remedial action by eliminating continued leaching of VOCs into groundwater and by preventing further exposure to humans and wildlife.

In December 1998, a 650-foot long permeable reactive iron wall (PRB) was installed approximately 100 feet east of the railroad tracks near the property line along the south of the ash landfill site. The

and the number of patients with a history of hypertension and/or diabetes mellitus was 1,111 (11.1%). The mean age of the study population was 57.5 years (range 18–85). The mean systolic blood pressure was 140 mm Hg (range 90–200) and the mean diastolic blood pressure was 80 mm Hg (range 60–120). The mean serum glucose level was 100 mg/dl (range 60–250). The mean serum triglyceride level was 150 mg/dl (range 50–500). The mean serum cholesterol level was 210 mg/dl (range 100–400). The mean serum HDL cholesterol level was 40 mg/dl (range 20–100). The mean serum LDL cholesterol level was 130 mg/dl (range 50–300). The mean serum VLDL cholesterol level was 30 mg/dl (range 10–100). The mean serum apolipoprotein B level was 120 mg/dl (range 50–250). The mean serum apolipoprotein A-I level was 40 mg/dl (range 20–100). The mean serum triglyceride/HDL cholesterol ratio was 3.75 (range 1.0–10.0). The mean serum VLDL/HDL cholesterol ratio was 0.75 (range 0.25–2.0). The mean serum LDL/HDL cholesterol ratio was 3.25 (range 1.0–10.0).

The mean serum total cholesterol/HDL cholesterol ratio was 5.25 (range 1.0–10.0). The mean serum triglyceride/HDL cholesterol ratio was 3.75 (range 1.0–10.0). The mean serum VLDL/HDL cholesterol ratio was 0.75 (range 0.25–2.0). The mean serum LDL/HDL cholesterol ratio was 3.25 (range 1.0–10.0).

wall was installed as a demonstration project to show that the PRB could be effective in reducing the concentrations of chlorinated ethenes through reductive dechlorination. The wall was constructed by placing a mixture of 50 percent zero valent reactive iron granules and 50 percent sand in a trench with a width of 14 inches and a depth ranging from 7 to 12 feet. Monitoring wells were installed upgradient, downgradient and within the wall to monitor its effectiveness. Groundwater sampling has been performed quarterly at these wells since the wall installation.

2 QUARTERLY MONITORING ACTIVITIES

Activities related to the 1Q 2003 sampling round at the Ash Landfill included a comprehensive gauging of all associated monitoring wells for groundwater elevations and collection of groundwater samples for laboratory analysis at 32 monitoring locations including monitoring wells on the site and at a neighboring farm house. Chemical analysis included field measurements of natural attenuation properties, as well as a certified laboratory analysis. A detailed description of these activities is provided below.

2.1 GROUNDWATER ELEVATION MEASUREMENTS

A round of groundwater elevation data was collected on March 14, 2003 by Parsons personnel prior to the commencement of sampling at the Ash Landfill. Depth to groundwater was measured from the top of the well casing using a Solnist® electronic water level indicator. The actual groundwater elevations were later calculated by subtracting the field measured depth to groundwater from the previously recorded surveyed elevation from a fixed point at the top of each well casing.

2.2 GROUNDWATER SAMPLING

Groundwater sampling occurred at the Ash Landfill from March 24 through April 2, 2003. Parsons collected groundwater samples from 29 monitoring wells, one farmhouse well, and two additional areas near the farmhouse, for a total of 32 monitoring locations. Groundwater samples were collected following EPA Region II low-flow groundwater sampling procedures. All monitoring wells were purged using a QED bladder pump and dedicated Teflon® tubing that was connected to a flow through cell in advance of using low-flow sampling techniques. A Horiba U-22 Water Quality Monitoring System (Horiba, Ltd., Kyoto, Japan) was used to establish stabilization of groundwater quality by measuring the following parameters: pH, temperature, specific conductivity, oxidation-reduction potential (ORP), dissolved oxygen (DO), and turbidity. These parameters were recorded at regular intervals during purging. Purge volume was estimated based on the water column height and diameter of the well. Wells were sampled when one of the following occurred: 1) groundwater quality stabilization was achieved; or 2) five well volumes were extracted from the well. Groundwater quality stabilization was defined using USEPA Region 2 Guidance on low-flow sampling procedures, which recommends that groundwater quality stabilization be defined by three consecutive readings of pH within ± 0.1 standard units, specific conductivity within $\pm 3\%$, temperature, turbidity and DO within

±10%, and ORP within ±10 mV. A final round of groundwater quality values were recorded after parameter stabilization and immediately prior to groundwater collection for laboratory sampling. The recorded values are considered the parameters at the time of sampling. Immediately following well purging, tubing was disconnected from the flow-through cell (to reduce the potential for cross-contamination and volatilization) and samples were collected.

The shallow aquifer well located outside the farmhouse was sampled using a new certified clean Teflon® bailer.

2.3 GROUNDWATER ANALYSES

The groundwater samples collected at the site were analyzed for VOCs, nitrates, sulfate, chlorides, methane/ethane/ethene (MEE), metals (Ca, Na, K, Mn, Mg), and dissolved organic carbon (DOC). The groundwater quality-sampling matrix for the 32 sampling locations included in the 1Q 2003 sampling event is included in **Table 2-1**. As shown on the sample matrix (Table 2-1), three duplicates, six quality assurance/quality control (QA/QC), and three rinsate blanks were collected as part of the groundwater sampling program.

Each monitoring location was also field tested for alkalinity, carbon dioxide, hydrogen sulfide and ferrous iron as indicated in Table 2-1. A Model DR/700 colorimeter (Hach Company, Loveland, CO) was used to measure hydrogen sulfide and ferrous iron, and a Model AL-APMG-L test kit (Hach Company, Loveland, CO) was used to measure alkalinity and carbon dioxide. Based on the result of the field chemistry analysis, it appears that the equipment was not working properly at the time of sample analysis. The associated data for these analyses was subsequently disregarded. This information will be collected during the next quarterly sampling round.

Groundwater samples were collected and sent to General Engineering Laboratories (GEL; Charleston, SC) for analysis of VOCs, metals, nitrates, sulfate, chlorates, MEE and DOC. Methods associated with the analysis are listed in Table 2-1. It should be noted that VOC concentrations were measured using two different methods, USEPA Methods 524.2 and 8260B. In general, samples collected from locations near the reactive wall were analyzed using USEPA Method 524.2, which has a lower detection limit and can report concentrations of cis-1,2-dichloroethene (cis-1,2-DCE) and trans-dichloroethene (trans-DCE). Samples collected from locations further upgradient or downgradient of the wall were analyzed using USEPA Method 8260B, which is a more powerful method; however this method has limited ability to decipher between cis- and trans-DCE. In wells downgradient of the wall, concentrations of chlorinated ethenes are expected to be lower than concentrations in other regions of the plume.

The Missouri River Division (MRD) of the US Army Corps of Engineers (USACOE) analyzed three QA sample (MWT-6, MWT-8, and PT-12A) for VOCs (Methods 524.2 and 8260B).

3 **QUARTERLY MONITORING RESULTS**

3.1 GROUNDWATER ELEVATION CONDITIONS

Groundwater elevations recorded during the 1Q 2003 sampling round, as well as historical maximum and minimum measured concentrations, are recorded in **Table 3-1**. The calculated Mean Sea Level (MSL) groundwater elevations are also calculated in Table 3-1 to determine saturated thickness within the aquifer. Based on a review of the historical data of the 60 monitoring wells listed in Table 3-1, the average seasonal variation in groundwater elevation is 6 ft and the maximum-recorded seasonal variation in groundwater elevation is 13.52 ft (MW-50D). The saturated thickness at monitoring wells in and around the permeable reactive barrier ranged between 4.45 ft (MWT-2) and 10.05 ft (MWT-8). **Appendix A** contains a summary of all groundwater elevation data collected at the Ash Landfill between 1995 and 1Q 2003.

Only 29 of the 38 wells with recorded groundwater elevations were sampled. The additional gauged wells were recorded to aid in creating a more comprehensive groundwater contour map in **Figure 3-1**. The groundwater flow direction is generally to the west, as seen in Figure 3-1, with an average horizontal hydraulic gradient of approximately 0.02 ‰ (Feasibility Memorandum for Groundwater Remediation Alternatives using Zero Valence Iron Continuous Reactive Wall at the Ash Landfill, August 2000). The 1Q 2003 groundwater elevation data are consistent with recorded groundwater elevations at the Ash Landfill site at this time of the year in previous years. The elevations near the well show that the groundwater flows through the wall at all locations during low flow conditions.

3.2 GROUNDWATER ANALYTICAL RESULTS – DOWNGRADIENT TOWARDS PRB

Field monitoring parameters measured prior to the collection of the analytical groundwater samples are presented in **Table 3-2**. Analytical results for the 1Q 2003 groundwater samples are presented in **Tables 3-3** and **3-4**. The complete laboratory report from General Environmental Laboratories is presented in **Appendix B**. Table 3-3 presents all analytical data collected and analyzed by the laboratory. Table 3-4 provides a summary of wells with detected VOCs (both methods) only. The results indicate that Trichloroethene (TCE) was detected in 14 sample locations and exceeded the GA groundwater standard of 5 µg/L in 9 locations (MW-20, MW-44A, MW-53, MWT-1, MWT-4, MWT-7, PT-12A, PT-17, and PT-18). All the locations exceeding the GA groundwater standard are upgradient of the permeable reactive barrier (PRB). As shown in **Figure 3-2**, TCE concentrations below the PRB are lower than those recorded upgradient of the PRB. This is a strong preliminary indication, based solely on the VOC results, that the PRB is working as designed. Cis-1,2-dichloroethene (cis-1,2-DCE) was detected in 20 locations and exceeded the GA standard of 5 µg/L in sixteen sample locations. Figure 3-2 reflects these results. The maximum detected concentrations of TCE and cis-1,2-DCE in groundwater were 599 µg/L and 667 µg/L, respectively, in well PT-12A, which is located downgradient of the original contamination source, but within the measured pathway of the plume. Significant levels

and the other two were not. The first was a small, dark, irregularly shaped mass, which had been partially dissolved by the acid. The second was a larger, more or less spherical mass, which had been partially dissolved by the acid. The third was a small, dark, irregularly shaped mass, which had been partially dissolved by the acid.

of TCE (268 µg/L) and cis-1,2-DCE (61.7 µg/L) were also detected in well PT-17, which is downgradient of PT-12A and upgradient of the permeable reactive barrier (PRB).

A historical comparison, the October 1999 total chlorinated ethenes groundwater data compared with the March 2003 total chlorinated ethenes groundwater data, in the aquifer is presented in **Figure 3-3**. The reduction of total chlorinated ethene concentrations within the aquifer and the migration of the plume downgradient is clearly depicted in the Figure. The decrease of total chlorinated ethenes in the vicinity of MW-44A, PT-18 and PT-12A indicates that the source is clearly degrading in this area. These wells are directly associated with the IRM (removal of the source area) which occurred from 1994 - 1995. Since the removal, PT-12A, PT-18 and MW-44A have seen a marked decrease in TCE and cis-1,2-DCE concentrations as shown in the individual trend analysis graphs (**Figures 3-4 to 3-6**).

The migration of total chlorinated ethenes downgradient of the source area is evident in the concentration increase in PT-17 from January 1997 to March 2003, which have steadily increased from 46 ug/L of TCE to 268 ug/L of TCE in March 2003 (**Figure 3-7**). These results are also evident in the change in the pathway and concentrations in Figure 3-3 from October 1999 to March 2003. It should also be noted that PT-17 is located downgradient of the removed source area but before the PRB (Figure 3-3). It can be concluded that the contaminant slug is moving through PT-17 towards the wall. The comparative trend maps shown in Figure 3-3 shows a marked increase in total chlorinated ethene concentrations moving downgradient toward the reactive wall. The shape of the plume is also reducing in size on the north end of the site and expanding along the length of the reactive wall, downgradient towards the south. During low flow conditions, the groundwater may migrate laterally within the wall.

3.3 GROUNDWATER ANALYTICAL RESULTS – VICINITY OF PRB

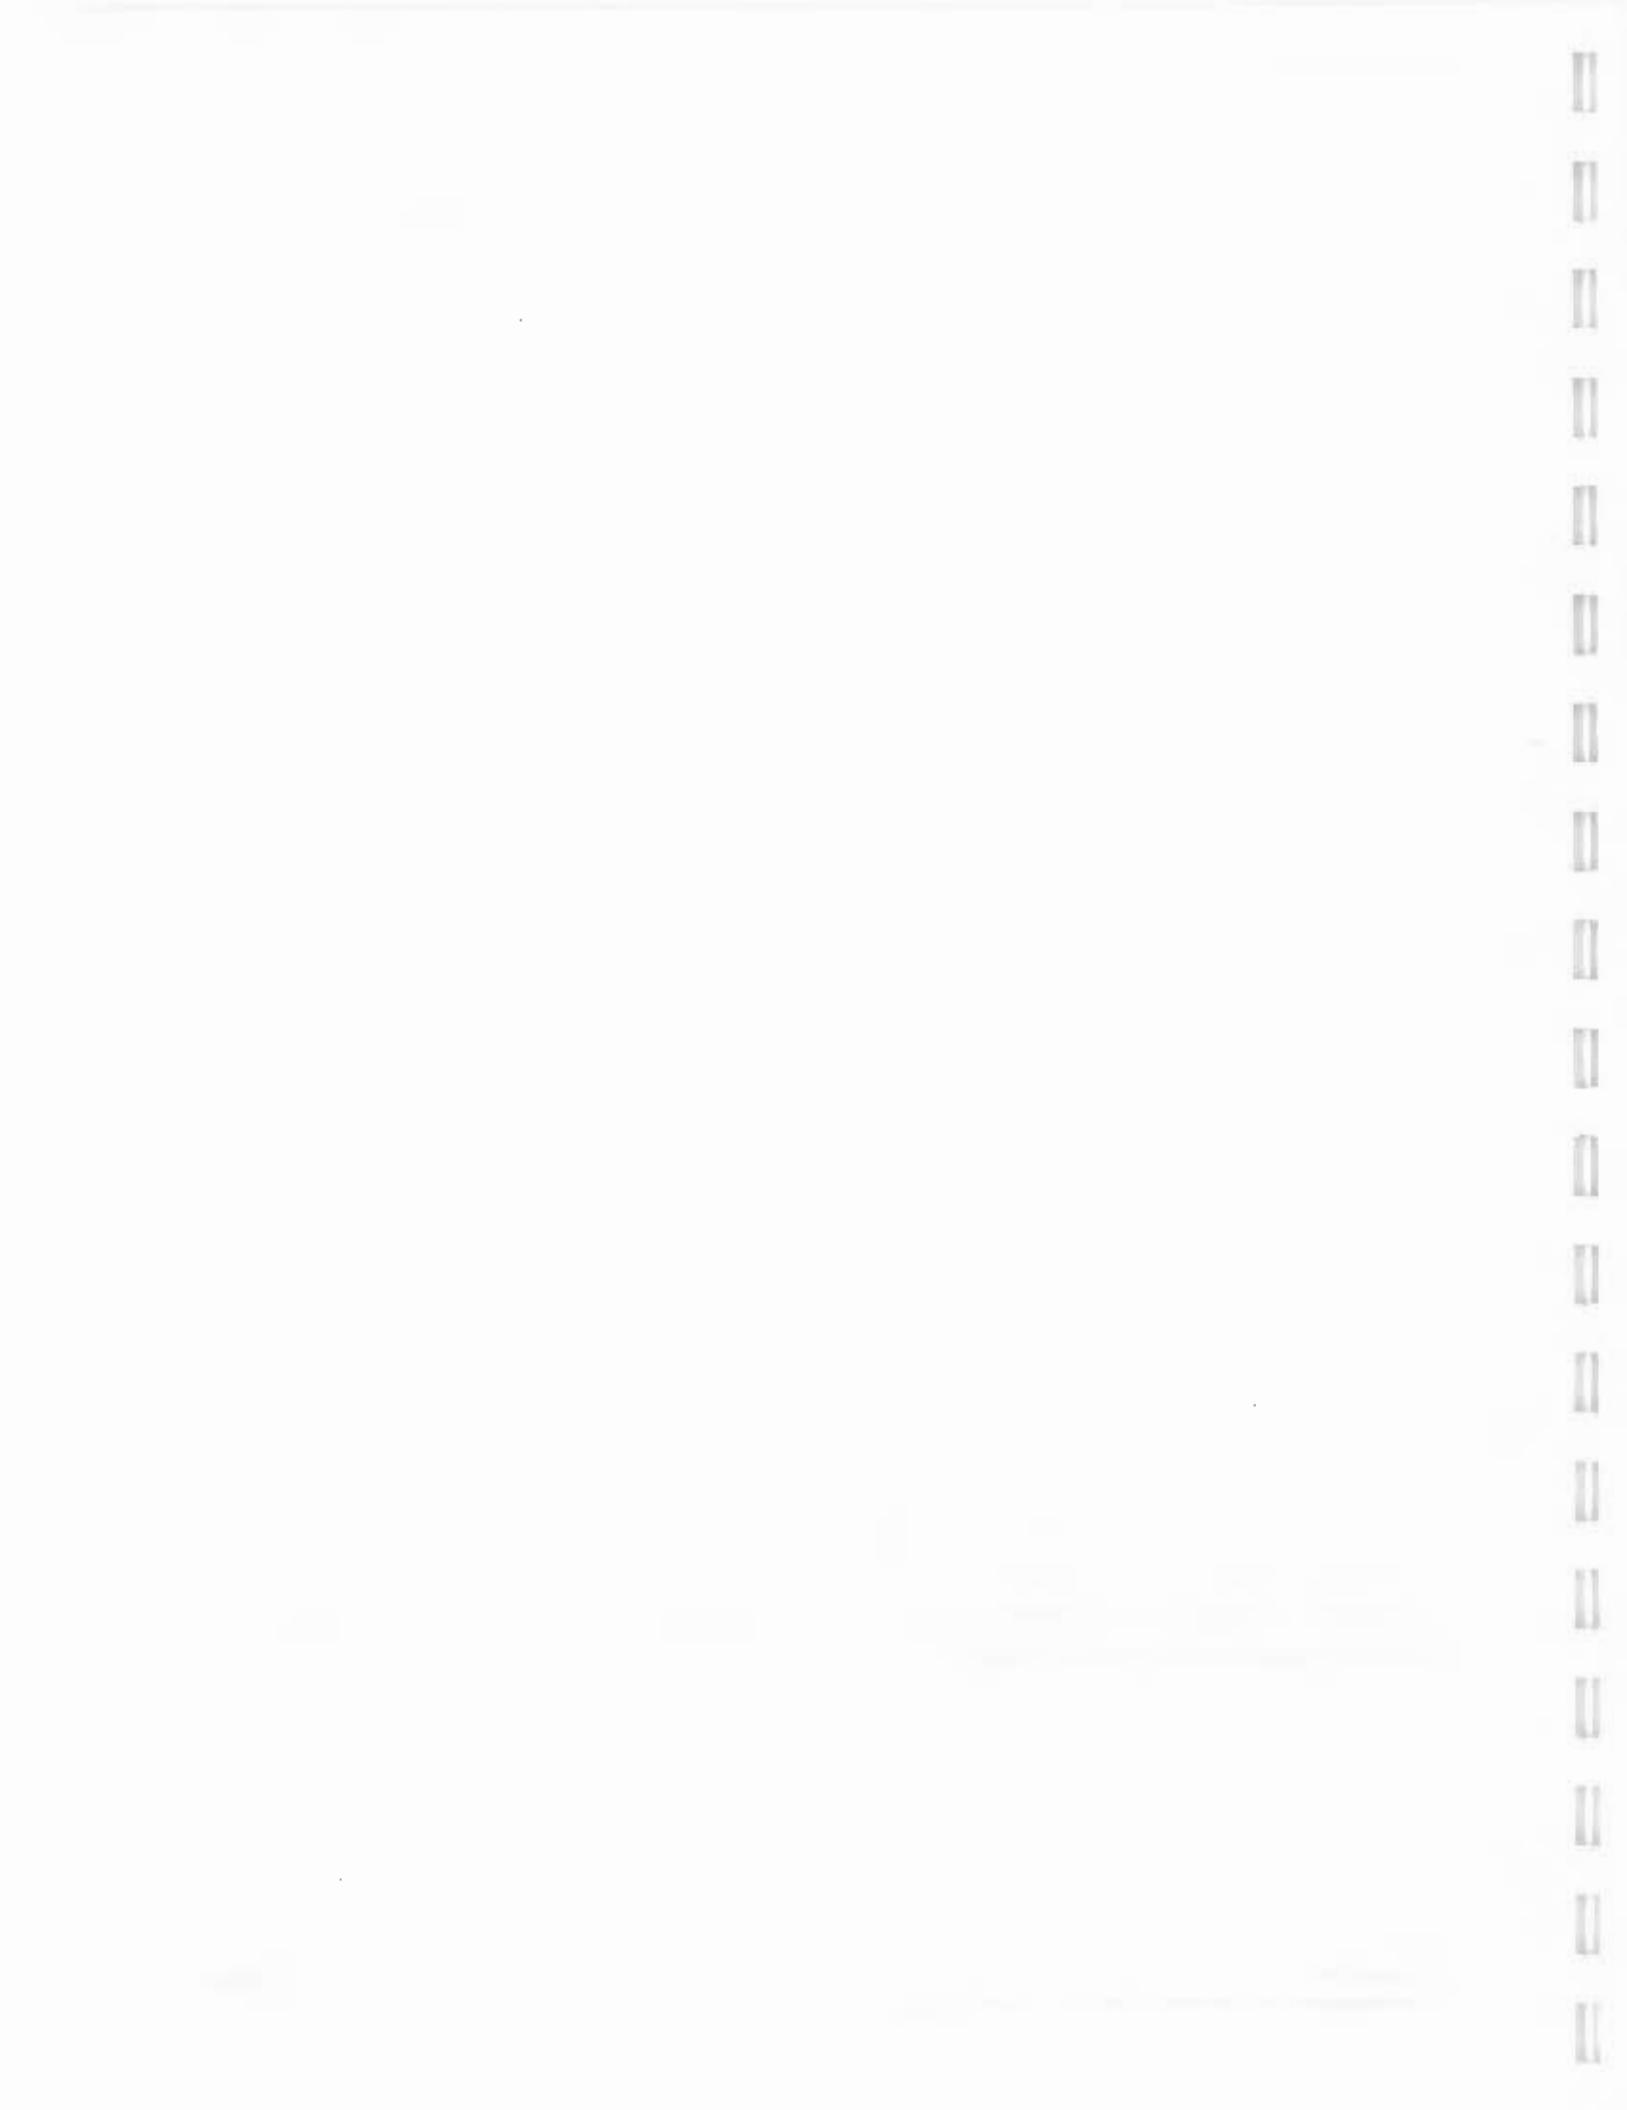

During the 1Q 2003 sampling event, samples were collected from three well tiered groupings that transect the existing PRB. Each cluster consists of three wells, one in the PRB, one upgradient, and one downgradient of the PRB. The three well groupings are MWT-1, MWT-2, and MWT-3; MWT-4, MWT-5, and MWT-6; and MWT-7, MWT-8, and MWT-9. As shown on **Figure 3-8**, wells MWT-1, MWT-4, and MWT-7 are located immediately upgradient of the PRB and wells MWT-3, MWT-6, and MWT-9 are located immediately downgradient of the PRB. Wells MWT-2, MWT-5, and MWT-8 are located in the middle of the PRB. The well groupings with the three wells spaced at approximately four foot intervals from one another allow the wells to be evaluated more effectively in terms of whether the PRB is enhancing the attenuation of chlorinated ethenes from the groundwater at the Ash Landfill. The maximum measured TCE concentration was 391 µg/L at monitoring well MWT-7. Monitoring well MWT-7 is located on the southern end of the wall, upgradient of the barrier, as shown on the enlarged figure of the reactive wall in **Figure 3-8**. The maximum measured cis-1,2-DCE concentration in wells near the PRB was 44.8 µg/L at MWT-8. Monitoring well MWT-8 is located within the same cluster as MWT-7 but downgradient of the wall. Detectable levels of cis-1,2-DCE above the GA standard

(5 µg/L) were found at all four monitoring wells that are immediately downgradient of the PRB (MWT-3, MWT-6, MWT-9, and PT-24), with a maximum concentration of 35.2. µg/L at PT-24. In the same grouping of wells, MWT-6 had no TCE detection and MWT-9 detected TCE at a concentration of 70.2 ug/L, which is above the GA standard. The wells positioned within in the actual PRB (MWT-2, 5 and 8) had no TCE detections. No detectable levels of chlorinated ethenes were found in groundwater samples from the farmhouse area (BN-S, FH-D, and FH-S), which are also located downgradient of the PRB.

Figures 3-9, 3-10, and 3-11 reflect the concentrations of TCE and cis-1,2-DCE globally transecting the PRB. The TCE/cis-1,2-DCE concentrations are reduced by greater than 50% in all three locations from the upgradient to downgradient location. The third tier (MWT-7, 8, and 9) located on the south end of the well, directly downgradient of PT-17, has the highest measured TCE and cis-1,2-DCE concentrations of the three groupings as mentioned above.

The concentration of TCE was observed to decrease from 391 µg/L at MWT-7 to 70.2 µg/L at MWT-9, but the cis-1,2-DCE concentration was observed to increase from 22.4 µg/L at MWT-7 to 34.7 µg/L at MWT-9. The slight rebound in TCE and cis-1,2-DCE concentrations in the downgradient wells indicates that there may be some residual contamination present downgradient of the wall. However, the concentrations of methane (3800 ug/L to 5960 ug/L) in the PRB wells along with concentrations of 50 ug/L to 2340 ug/L of methane in the wells immediately downgradient is evident of methanogenesis, a biodegradation process enhanced by the presence of the iron filing wall. The three wells within the PRB also have low detections of ethane (8.12J ug/L to 10.9J ug/L) and ethene (5.92J ug/L and 8.16J ug/L). Detections of ethane and ethene in the system, even at low concentrations, indicate the formation of chlorinated aliphatic hydrocarbon (CAH) degradation products and biodegradation occurring. **Table 3-5** shows the results of the natural attenuation parameters analyzed.

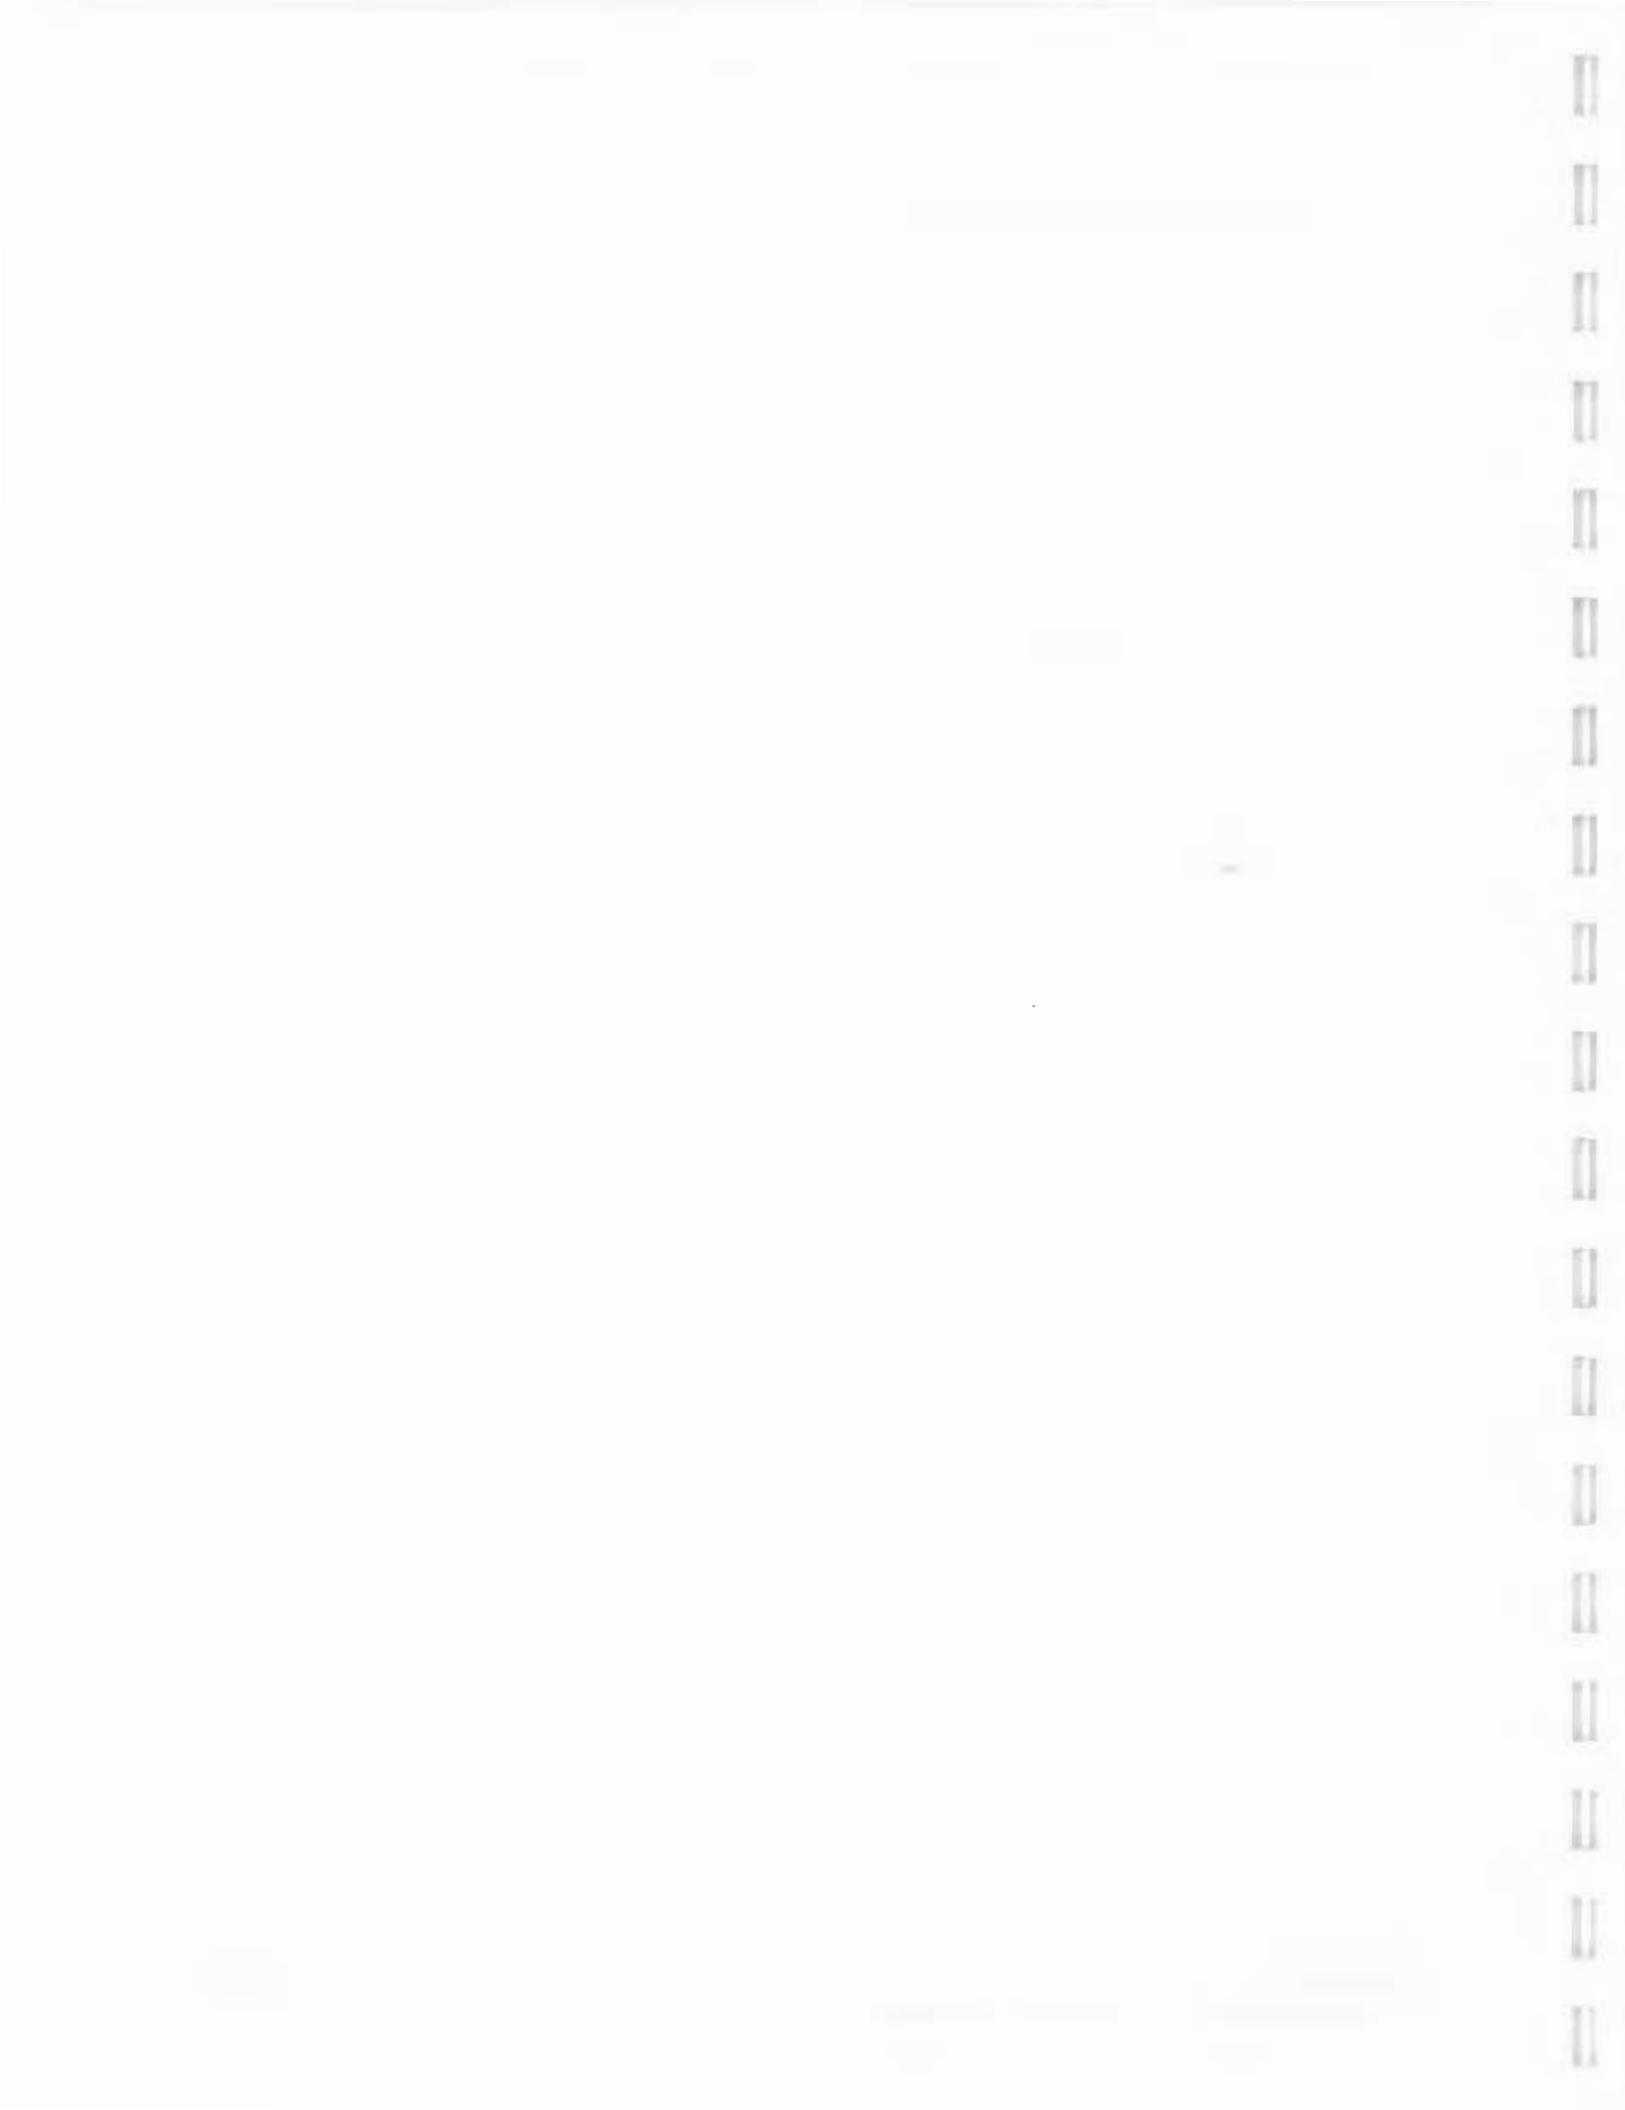

Figure 3-12 depicts the groundwater trend associated with well number PT-24, which is downgradient of the PRB. Concentrations of TCE and, more notably, cis-1,2-DCE have decreased since the wall installation in 1998 (Figure 3-3). The marked decrease in the trend indicates that the wall is functioning as intended. The wall is converting the cis-1,2-DCE to further breakdown products. PT-24 shows a concentration of 1720 ug/L for methane, which indicates that methanogenesis is continuing to occur beyond the wall. MW-56, located further downgradient of the wall, has a methane concentration of 61.3 ug/L, which is lower than the PT-24 methane concentration by 1659 ug/L. The presence of methane in MW-56, however, is a good indication that methanogenesis is still aiding in breaking down the original contaminant.

4 SUMMARY AND CONCLUSIONS

In summary, the 1Q 2003 groundwater monitoring and sampling event found:

1. Groundwater flow direction, and horizontal gradients are consistent with previous data collected in the area.
2. Groundwater elevations were high as expected for the spring.
3. TCE and cis-1,2-DCE concentrations are decreasing in monitoring wells PT-12A, PT-18 and MW-44a, which are in the vicinity of the removed contaminant source area. This shows that the source area removal was successful.
4. The contaminant plume is migrating downgradient from the source area, as evident in the groundwater trends from PT-17. PT-17 is in direct downgradient pathway of the plume and has seen significant increase in TCE and cis-1,2-DCE concentrations over the last several years.
5. Biodegradation is occurring as a direct result of the presence of the reactive iron wall. Wells within the wall and directly downgradient of the wall contain elevated levels of methane, which is indicative of the biodegradation process, methanogenesis. Further evidence of product breakdown is the decreased amounts of TCE and cis-1,2-DCE on the downgradient side of the reactive wall. It is assumed that some residual contamination existed prior to the installation of the wall and is contributing to some of the concentrations seen in the downgradient monitoring wells.
6. Data shows that the most contaminated portion of the plume passes through the southern end of the PRB. This suggests that shorter walls may be sufficient in order to remove the remaining chlorinated solvents from the groundwater in a timely manner.

* Set pump intake at midpoint of saturated column or 1.25 feet off the bottom of the well, to allow a minimum distance of 1.25 feet between intake and POW

1 - Sampled at top

2 - Sampled according to EPA Region II low-flow sampling procedure

MS - Matrix Spike

MSD - Matrix Spike Duplicate

NOTES:

1. Groundwater criteria source is NY State Class GA Groundwater Standard (TOGS 1.1.1, June 1998), except as noted below.
 (a) MCL - USEPA Maximum Contaminant Level

J = the report value is an estimated concentration

-- = compound was not detected

Shade indicates concentration above action level

Geometric Series

Geometric series
are sequences of
numbers where each
term is obtained by
multiplying the previous
term by a constant factor.

For example, the sequence
1, 2, 4, 8, 16, ...
is a geometric series
with a common ratio of 2.

The general formula for
the n -th term of a
geometric series is:
$$a_n = a_1 \cdot r^{n-1}$$

where a_1 is the first term
and r is the common ratio.

Geometric series
have many applications
in mathematics and
science.

Downgradient	MWT-9	1.68	0.221	38.6	15	1620	25 U	25 U	4.89	122	7.15	9.65	0.380	285

Note:

PRB - permeable reactive barrier

"Upgradient" refers to a location upgradient of the PRB.

"Downgradient" refers to a location upgradient of the PRB.

U - compound was not detected

J - the report value is an estimated concentration

ND - Non-detect

mg/L - milligrams per liter

ug/L - micrograms per liter

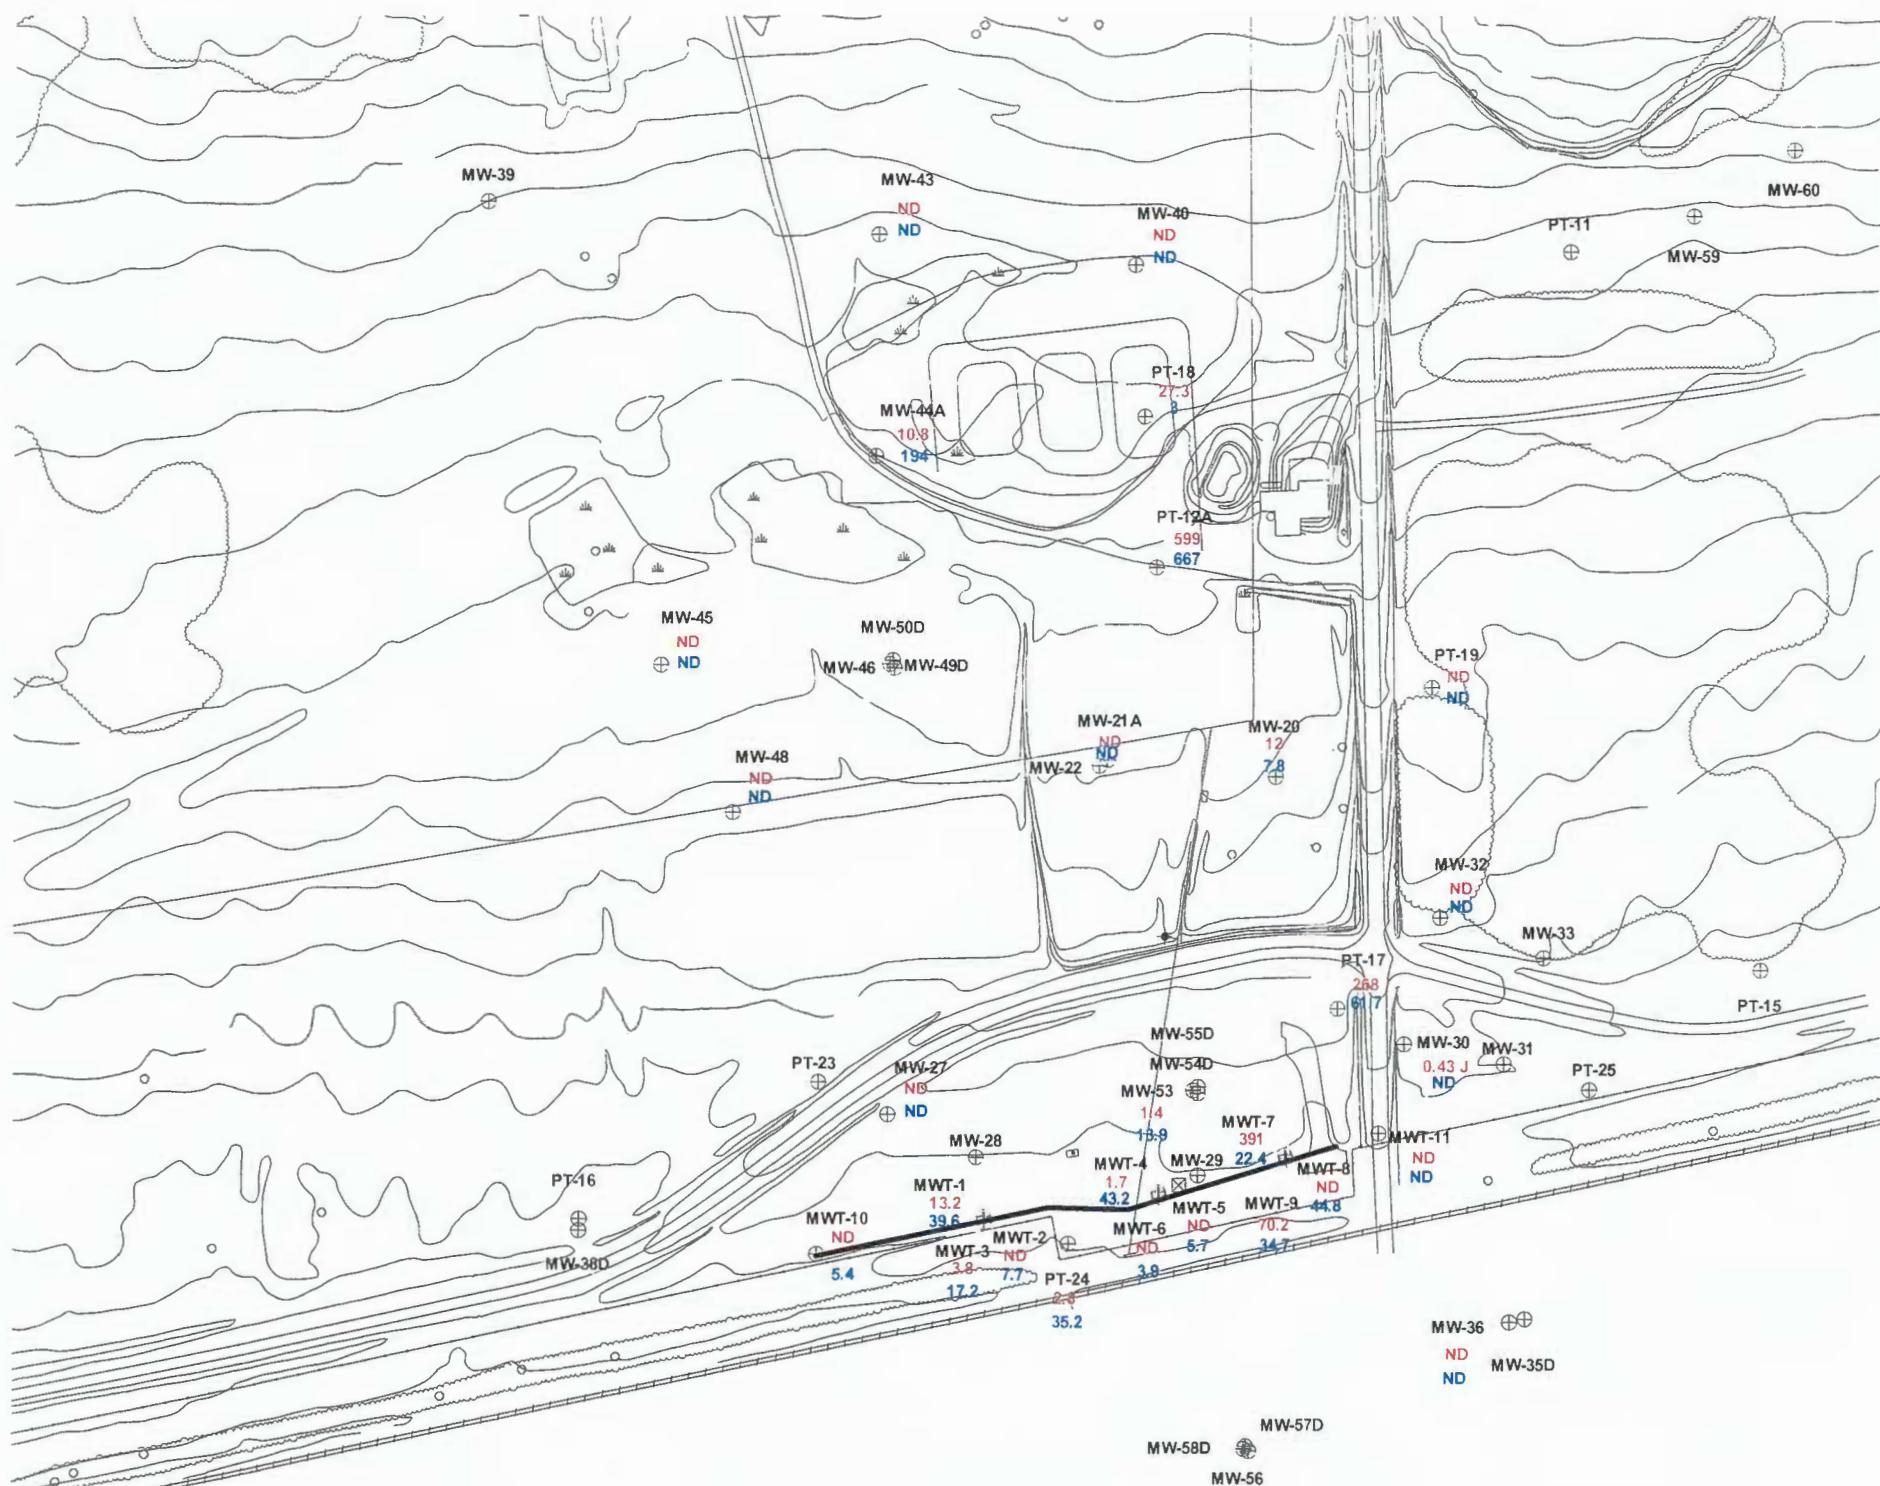

mV - millivolts

deg. C - degrees centigrade (C°)

uS/cm - microsiemens per centimeter

NTU - Nephelometric Turbidity Unit

CASE NARRATIVE
for
Parsons Engineering Science, Inc.
Seneca Army Depot
SDG#s 77035/77089

April 15, 2003

Laboratory Identification:

General Engineering Laboratories, LLC

Mailing Address:

P.O. Box 30712
Charleston, South Carolina 29417

Express Mail Delivery and Shipping Address:

2040 Savage Road
Charleston, South Carolina 29414

Telephone Number:

(843) 556-8171

Summary:

Sample receipt

The samples arrived at General Engineering Laboratories, LLC (GEL) Charleston, South Carolina on March 26, 2003, for Environmental Analyses. All sample containers arrived without any visible signs of tampering or breakage. The samples were delivered with chain of custody documentation and signatures.

The laboratory received the following samples:

<u>Laboratory Identification</u>	<u>Sample Description</u>
77035001	TR2110
77035002	ARD2183
77035003	ARD2184
77035004	ARD2194
77035005	TR2106
77035006	TR2108
77035007	ARD2196
77035008	ARD2191

GENERAL ENGINEERING LABORATORIES, LLC

a Member of THE GEL GROUP, INC.

P.O. Box 30712 • Charleston, SC 29417 • 2040 Savage Road (29407)
Phone (843) 556-8171 • Fax (843) 766-1178 • www.gel.com

77089001	ARD2196
77089002	ARD2191
77089003	ARD0032

Case Narrative

Sample analyses were conducted using methodology as outlined in General Engineering Laboratories (GEL) Standard Operating Procedures. Any technical or administrative problems during analysis, data review, and reduction are listed below by analytical parameter.

Internal Chain of Custody:

Custody was maintained for all samples.

Data Package:

The enclosed data package contains the following sections: Case Narrative, Qualifier Flag Definitions, Chain of Custody, Cooler Receipt Checklist, GC/MS Volatile Analysis, FID Analysis, Inorganic Analysis, and General Chemistry Analysis.

This data package, to the best of my knowledge, is in compliance with technical and administrative requirements.

Valerie S. Davis
Project Manager

COOLER RECEIPT CHECKLIST

SAMPLE RECEIPT & REVIEW FORM

Date 3-26-03

Client Seneca Army Depot Received by MIC

SAMPLE REVIEW CRITERIA	YES	NO	N/A	COMMENTS/QUALIFIERS
1 Were shipping containers received intact and sealed? If no, notify the Project Manager	<input checked="" type="checkbox"/>			
2 Were chain of custody documents included?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>		
3 Shipping container temperature(s) checked?	<input checked="" type="checkbox"/>			<u>3° 3°</u>
4 Is temperature documented on Chain of Custody?	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>		
5 Was shipping container temperature within specifications (4 +/- 2 C)? If no, notify Project Manager	<input checked="" type="checkbox"/>			
6 Are any of the samples identified by the client as radioactive? If yes, complete radioactive receipt form	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>		
Any samples not indentified by the client as radioactive must be screened for radioactivity.	<u>KO</u>			observed background CPM
If screening results indicate > x2 background inform the RSO.	<u>KO</u>			Max. observed sample CPM
7 Were chain of custody documents completed correctly? (Ink, signed, match containers)	<input checked="" type="checkbox"/>			
8 Were sample containers received intact and sealed? If no, notify the Project Manager	<input checked="" type="checkbox"/>			
9 Were all sample containers properly labeled?	<input checked="" type="checkbox"/>			
10 Were correct sample containers received?	<input checked="" type="checkbox"/>			
11 Preserved samples checked for pH?	<input checked="" type="checkbox"/>			
12 Were samples preserved correctly? If no, notify Project Manager	<input checked="" type="checkbox"/>			
13 Were samples received within holding time? If No, notify Project Manager	<input checked="" type="checkbox"/>			
14 Were VOA vials free of headspace?	<input checked="" type="checkbox"/>

VOLATILE

ANALYSIS

GC/MS Volatile Organics
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77035

Method/Analysis Information

Procedure: Volatile Organic Compounds by Gas Chromatograph/Mass Spectrometer
Analytical Method: EPA 524.2
Prep Method: EPA 524.2
Analytical Batch Number: 241844

Sample Analysis

The following client and quality control samples were analyzed to complete this sample delivery group/work order using the methods referenced in the Analysis Information section:

Sample ID	Client ID
77035001	TR2110
77035002	ARD2183
77035003	ARD2184
77035004	ARD2194
77035005	TR2106
77035006	TR2108
1200400499	Method Blank (MB)
1200400500	Laboratory Control Sample (LCS)
1200401228	Method Blank (MB)
1200401229	Laboratory Control Sample (LCS)
1200400501	77035005(TR2106) Matrix Spike (MS)
1200400502	77035005(TR2106) Matrix Spike Duplicate (MSD)

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-022 REV.3.

Calibration Information

Due to software limitations, all the data files comprising the initial calibration curve may not be listed on the initial calibration summary form. All calibration files are listed in the calibration history report in the "Standard Data" section.

Initial Calibration

All the initial calibration requirements were met.

Continuing Calibration Verification Requirements

All the calibration verification standard (CCV) requirements were met.

Quality Control (OC) Information

Method Blank Acceptance

Target analytes were not detected above the reporting limit in the blank.

Surrogate Recoveries

Surrogate recoveries, in all samples and quality control samples, were within the acceptance limits.

Laboratory Control Sample Recovery Statement (LCS)

All the required analyte recoveries in the LCS were within the acceptance limits.

QC Sample Designation

The following sample was designated for spike analysis: 77035005 (TR2106).

Spike Recovery Statement

All the required spike recoveries were within the acceptance limits.

Spike Duplicate Recovery Statement

All target analytes in the matrix spike duplicate sample were within the required acceptance limits, except for the low recovery of trichloroethylene. Trichloroethylene was detected in the native sample at a concentration above the calibration level. 1200400502 (TR2106).

Relative Percent Difference Statement (RPD)

The RPD between the matrix spike and matrix spike duplicate was above the acceptance limit for Trichloroethylene, possibly due to the high level of trichloroethylene detected in the native sample. 1200400501 (TR2106) and 1200400502 (TR2106).

Internal Standard (ISTD) Acceptance

The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information

77035 -VOA

Page 2 of 4

Holding Time Specifications

All the samples were prepared and/or analyzed within the required holding time period.

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The following samples were diluted because target analyte concentrations exceeded the calibration range:

77035004 (ARD2194) 1:10

77035005 (TR2106) 1:10

Sample Re-prep/Re-analysis

Re-analyses were not required for samples in this sample group/work order.

Miscellaneous Information**Electronic Package Comment**

The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

A nonconformance report was not required for this sample delivery group/work order.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were not required for this sample delivery group/work order.

Additional Comments

There were no additional comments.

System Configuration

The laboratory utilizes the following GC/MS configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through analysis on one of the following columns:

Column ID	Column Description
J&W1	DB-624, 60m x 0.25mm, 1.4um
J&W2	DB-624, 75m x 0.53mm, 3.0um

Instrument Configuration

Instrument systems are reference in the raw data and individual form headers by the Instrument ID designations below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOA1	HP6890/HP5973	J&W1	Trap C
VOA2	HP6890/HP5973	J&W1	Trap C
VOA4	HP5890/HP5972	J&W1	Trap K
VOA5	HP5890/HP5972	J&W1	Trap C
VOA7	HP5890/HP5972	J&W2	Trap K
VOA8	HP6890/HP5973	J&W1	Trap K
VOA9	HP6890/HP5973	J&W1	Trap C

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

77035 -VOA

Page 4 of 4

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

FID
ANALYSIS**

FID Case Narrative
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG# 77035

Method/Analysis Information

Procedure: Dissolved Gases by Flame Ionization Detector
Analytical Method: SW846 8015A/B SVOC
Prep Method: SW846 8015A/B SVOC
Analytical Batch Number: 242473
Prep Batch Number: 242472

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8015A/B SVOC:

Sample ID	Client ID
77035001	TR2110
77035002	ARD2183
77035003	ARD2184
77035004	ARD2194
77035005	TR2106
77035006	TR2108
77035007	ARD2196
77035008	ARD2191
1200402040	Method Blank (MB)
1200402042	Laboratory Control Sample (LCS)
1200402041	77035005(TR2106) Sample Duplicate (DUP)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, Inc. (GEL) as Standard Operating Procedures (SOP).

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this SDG.

CCV Requirements

All calibration verification standard(s) (CVS, ICV or CCV) requirements have been met for this SDG.

Quality Control (QC) Information

Blank Acceptance

The blank(s) analyzed with this SDG met the established acceptance criteria.

Surrogate Recoveries

No surrogate was added to any of the samples in this batch.

LCS Recovery Statement

The LCS spike recoveries for this SDG were within the established acceptance limits.

QC Sample Designation

An MS/MSD pair was not performed on any samples contained in this batch. A sample duplicate was performed to measure precision and accuracy of the batch.

Duplicate RPD Statement

The relative percent differences (RPD) between the sample and its duplicate were within the acceptable limits.

Technical Information

Holding Time Specifications

GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

Sample 77035006 (TR2108) was diluted for methane.

Sample Re-prep/Re-analysis

Sample 77035006(TR2108) was re-analyzed at 1:10 dilution for methane.

Miscellaneous Information

Electronic Package Comment

This package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. The data validator will always sign and date the case narrative.

Nonconformance (NCR) Documentation

No nonconformance reports (NCRs) has been generated for this SDG.

Manual Integrations

Certain standards and QC samples may have required manual integrations to correctly position the baseline as set in the calibration standard injections. If manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction.

Additional Comments

No additional comments are needed for this sample group.

System Configuration

Chromatographic Columns

Column ID	Column Description
J&W1	DB-WAX(0.53mm x 0.5u x 30m)
J&W2	DB-624(0.53mm x 3.0u x 30m)
J&W3	DB-1(0.53mm x 1.5u x 30m)
J&W4	DB-608(0.53mm x 0.83u x 30m)
J&W5	GS-Q(0.53mm x 30m)
Phenomenex	ZB-5(0.25mm x 0.25u x 30m)

Instrument Configuration

Instrument ID	System Configuration	Chromatographic Column
FIDa	HP 5890 Series II GC/FID	J&W1/J&W3/J&W4
FID2a	HP 5890 Series II GC/FID	J&W2/J&W5
FID3a	HP 5890 Series II GC/FID	Phenomenex
FID4a	HP 5890 Series II GC/FID	Phenomenex

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Tom Caw Date: 4/14/03

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

System Configuration

The ICP analysis was performed on a Perkin Elmer 4300 Optima radial/axial-viewing inductively coupled plasma atomic emission spectrometer. The instrument is equipped with a Burgener nebulizer, cyclonic spray chamber, and yttrium or scandium internal standard. Operating conditions for the ICP are set at a power level of 1500 watts. The instrument has a peristaltic pump flow rate of 1.4L/min, argon gas flows of 15 L/min and 0.2 L/min for the torch and auxiliary gases, and a flow setting of 0.65L/min for the nebulizer.

Calibration Information

Instrument Calibration

The instrument calibrations are conducted using the method and instrument manufacturer's specifications. All initial calibration requirements have been met for this SDG.

CRDL Requirements

All CRDL standard(s) met the referenced advisory control limits.

ICSA/ICSAB statement

All interference check samples (ICSA and ICSAB) associated with this SDG met the established acceptance criteria.

Continuing Calibration Blank (CCB) Requirements

All continuing calibration blanks (CCB) bracketing this batch met the established acceptance criteria, with the exception of sodium in CCB6. Samples bracketed By CCB6 either did not contain sodium above the RLD, or sodium was present at concentrations more than ten times the amount present in CCB6.

Continuing Calibration Verification (CCV) Requirements

All continuing calibration verifications (CCV) bracketing this SDG met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Acceptance

The method blank analyzed with this SDG did not contain analytes of interest at concentrations greater than the client required detection limits (CRDL).

LCS Recovery Statement

The laboratory control sample (LCS) met the recommended acceptance criteria for percent recovery (%R) for all elements of interest.

Quality Control (QC) Sample Statement

The following sample was selected as the quality control (QC) sample for this batch: 77035005 (TR2106).

Matrix Spike Recovery Statement

The percent recovery (%R) obtained from the MS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS met the recommended quality control acceptance criteria for percent recoveries for all applicable analytes.

Duplicate RPD Statement

The relative percent difference (RPD) obtained from the designated sample duplicate (DUP) is evaluated based on acceptance criteria of 20% when the sample is >5X the contract required detection limit(RL). In cases where either the sample or duplicate value is less than 5X the RL, a control of RL is used to evaluate the DUP results. All applicable analytes met these requirements.

Serial Dilution % Difference Statement

The serial dilution is used to assess interferences due to matrix suppression or enhancement. Raw element concentrations that are at least 50X the instrument detection limit (IDL) for ICP analyses and 100X the IDL for ICP-MS analyses are applicable for serial dilution assessment. All applicable analytes met the acceptance criteria, percent difference value of <10.

Technical Information

Holding Time Specifications

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed

in hours are calculated in the GELIMS system by hours. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures performed in association with this SDG followed the Standard Operating Procedure (SOP) guidelines. All samples in this SDG were prepared in accordance with the referenced SW-846 procedures.

Sample Dilutions

Dilutions are performed to minimize matrix interferences resulting from elevated mineral element concentrations present in soil samples and/or to bring over range target analyte concentrations into the linear calibration range of the instrument. No sample dilutions were needed in this SDG.

Preparation Information

The samples in this SDG were prepared exactly according to the sited SOP.

Miscellaneous Information

Nonconformance Documentation

Nonconformance reports (NCRs) are generated to document procedural anomalies that may deviate from referenced SOP or contractual documents. No NCR was generated with this SDG.

Additional Comments

No additional comments are needed for this sample group.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Method/Analysis Information

Procedure: Ion Chromatography (IC)

Analytical Method: EPA 300.0

Analytical Batch Number: 241447

Sample Analysis

The following samples were analyzed using the analytical protocol as established in EPA 300.0:

Sample ID	Client ID
77035001	TR2110
77035002	ARD2183
77035003	ARD2184
77035004	ARD2194
77035005	TR2106
77035006	TR2108
77035007	ARD2196
77035008	ARD2191
1200399521	Method Blank (MB)
1200399524	Laboratory Control Sample (LCS)
1200399522	77035001(TR2110) Sample Duplicate (DUP)
1200399929	77035005(TR2106) Sample Duplicate (DUP)
1200399523	77035001(TR2110) Post Spike (PS)
1200399930	77035005(TR2106) Post Spike (PS)

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-086 REV.8.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: Dionex DX300 Ion Chromatograph equipped with a Dionex AS9-HC general purpose anion column

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information

Blank Acceptance

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recovery for the laboratory control sample was within the required acceptance limits.

Quality Control

The following samples were designated for Quality Control:

77035001 (TR2110)

77035005 (TR2106)

Sample Spike Recovery

The spike recoveries for this sample set were within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Differences between the samples and duplicates for this batch were within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

The following samples from this sample group were received with insufficient time to prep and/or analyze the samples within the remaining method-specified holding time for nitrate. The samples were analyzed as soon as possible. See NCR 26399.

77035001 (TR2110)
77035002 (ARD2183)
77035003 (ARD2184)
77035007 (ARD2196)

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The following samples in this sample group were diluted due to high concentration for this analysis. See the Certificates of Analysis and/or raw data for the individual dilution factors.

1200399522 (TR2110)
1200399523 (TR2110)
1200399929 (TR2106)
1200399930 (TR2106)
77035001 (TR2110)
77035002 (ARD2183)
77035003 (ARD2184)
77035004 (ARD2194)
77035005 (TR2106)
77035007 (ARD2196)
77035008 (ARD2191)

Miscellaneous Information

Nonconformance Reports

Nonconformance Report (NCR) 26399 was submitted for samples in this sample group for this analysis.

Method/Analysis Information

Procedure: Total Organic Carbon (TOC)

Analytical Method: SW846 9060

Analytical Batch Number: 244246

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 9060:

Sample ID	Client ID
77035001	TR2110
77035002	ARD2183
77035003	ARD2184

1200406425	Laboratory Control Sample (LCS)
1200406421	77035005(TR2106) Sample Duplicate (DUP)
1200406422	77341001(ARD2193) Sample Duplicate (DUP)
1200406423	77035005(TR2106) Post Spike (PS)
1200406424	77341001(ARD2193) Post Spike (PS)

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-093 REV.3.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: O-I Analytical Model 1010 Total Organic Carbon Analyzer

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information

Blank Acceptance

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recovery for the laboratory control sample was within the required acceptance limits.

Quality Control

The following samples were designated for Quality Control:

77035005 (TR2106)

77341001 (ARD2193)

Sample Spike Recovery

The spike recoveries for this sample set were within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Differences between the samples and duplicates for this batch were within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

No samples in this sample group required dilutions.

Miscellaneous Information

Nonconformance Reports

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Additional Comments

A 15 mg/L Total Inorganic Carbon check standard is analyzed with each analytical run to prove that the instrument is effectively sparging away the inorganic carbon.

Certification Statement

* Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Application Issues:

Sample Analyzed out of Holding

Specification and Requirements
Nonconformance Description:

NRG Disposition:

1. The following samples were analyzed out of holding for nitrate:
77035001
77035002
77035003
77035007

1. Samples 77035001, 77035002, 77035003, & 77035007 were received by the lab with insufficient time to prep and analyze the samples before the hold time expired for nitrate. The samples were analyzed as soon as possible by the analyst.

1	SW846 9060	
2	EPA 300.0	
3	EPA 300.0	

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

The above sample is reported on an "as received" basis.

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

The above sample is reported on an "as received" basis.

< Actual result is less than amount reported

QC Summary

Workorder: 77035

Page 2 of 2

Paramname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anist	Date	Time
-----------	-----	--------	------	----	-------	------	------	-------	-------	------	------

- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

[^] The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Summary:

Sample receipt

The samples arrived at General Engineering Laboratories, LLC (GEL) Charleston, South Carolina on April 3, 2003, for Environmental Analyses. All sample containers arrived without any visible signs of tampering or breakage. The samples were delivered with chain of custody documentation and signatures.

The laboratory received the following samples:

<u>Laboratory Identification</u>	<u>Sample Description</u>
77557001	ARD2195

Case Narrative

Sample analyses were conducted using methodology as outlined in General Engineering Laboratories (GEL) Standard Operating Procedures. Any technical or administrative problems during analysis, data review, and reduction are listed below by analytical parameter.

Internal Chain of Custody:

Custody was maintained for all samples.

Data Package:

The enclosed data package contains the following sections: Case Narrative, Qualifier Flag Definitions, Chain of Custody, Cooler Receipt Checklist, GC/MS Volatile Analysis, FID Analysis, Inorganic Analysis, and General Chemistry Analysis.

This data package, to the best of my knowledge, is in compliance with technical and administrative requirements.

Valerie S. Davis
Project Manager

GC/MS

VOLATILE

ANALYSIS

GC/MS Volatile Organics
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77557

Method/Analysis Information

Procedure: Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer
Analytical Method: SW846 8260B
Prep Method: SW846 5030B
Analytical Batch Number: 244217

Sample Analysis

The following client and quality control samples were analyzed to complete this sample delivery group/work order using the methods referenced in the Analysis Information section:

Sample ID	Client ID
77557001	ARD2195
77557002	ARD2192
1200407010	Method Blank (MB)
1200407011	Laboratory Control Sample (LCS)

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV.7.

Calibration Information

Due to software limitations, all the data files comprising the initial calibration curve may not be listed on the initial calibration summary form. All calibration files are listed in the calibration history report in the "Standard Data" section.

Initial Calibration

All the initial calibration requirements were met.

Continuing Calibration Verification Requirements

All the calibration verification standard (CCV) requirements were met.

Quality Control (QC) Information

Method Blank Acceptance

Target analytes were not detected above the reporting limit in the blank.

Surrogate Recoveries

Surrogate recoveries, in all samples and quality control samples were within the acceptance limits.

Laboratory Control Sample Recovery Statement (LCS)

All the required analyte recoveries in the LCS were within the acceptance limits.

QC Sample Designation

Matrix spikes were analyzed on a sample of similar matrix in another Parsons sample delivery group, sample number 77469001 (ARD2188) in SDG 77469.

Spike Recovery Statement

All the required spike recoveries were within the acceptance limits.

Spike Duplicate Recovery Statement

All the required spike recoveries were within the acceptance limits.

Relative Percent Difference Statement (RPD)

The RPD between spike recoveries were within the acceptance limits.

Internal Standard (ISTD) Acceptance

The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information**Holding Time Specifications**

All the samples were prepared and/or analyzed within the required holding time period.

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The samples in this sample delivery group/work order did not require dilutions.

Miscellaneous Information**Electronic Package Comment**

The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

A nonconformance report was not required for this sample delivery group/work order.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were not required for this sample delivery group/work order.

System Configuration

The laboratory utilizes the following GC/MS configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through analysis on one of the following columns:

Column ID	Column Description
J&W1	DB-624, 60m x 0.25mm, 1.4um
J&W2	DB-624, 75m x 0.53mm, 3.0um

Instrument Configuration

Instrument systems are reference in the raw data and individual form headers by the Instrument ID designations below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOA1	HP6890/HP5973	J&W1	Trap C
VOA2	HP6890/HP5973	J&W1	Trap C
VOA4	HP5890/HP5972	J&W1	Trap K
VOA5	HP5890/HP5972	J&W1	Trap C
VOA7	HP5890/HP5972	J&W2	Trap K
VOA8	HP6890/HP5973	J&W1	Trap K
VOA9	HP6890/HP5973	J&W1	Trap C

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Page 1 of 4

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-022 REV.3.

Calibration Information

Due to software limitations, all the data files comprising the initial calibration curve may not be listed on the initial calibration summary form. All calibration files are listed in the calibration history report in the "Standard Data" section.

Initial Calibration

All the initial calibration requirements were met.

Continuing Calibration Verification Requirements

All the calibration verification standard (CCV) requirements were met.

Quality Control (QC) Information

Method Blank Acceptance

Target analytes were not detected above the reporting limit in the blank.

Surrogate Recoveries

Surrogate recoveries, in all samples and quality control samples were within the acceptance limits.

Laboratory Control Sample Recovery Statement (LCS)

All the required analyte recoveries in the LCS were within the acceptance limits.

QC Sample Designation

The following sample was designated for spike analysis: 77559003 (ARD2185).

Spike Recovery Statement

All the required spike recoveries were within the acceptance limits.

Spike Duplicate Recovery Statement

All the required spike recoveries were within the acceptance limits.

Relative Percent Difference Statement (RPD)

The RPD between spike recoveries were within the acceptance limits.

Internal Standard (ISTD) Acceptance

The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information

Holding Time Specifications

All the samples were prepared and/or analyzed within the required holding time period.

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

77559 -VOA

Page 2 of 4

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions

The samples in this sample delivery group/work order did not require dilutions.

Sample Re-prep/Re-analysis

Re-analyses were not required for samples in this sample group/work order.

Miscellaneous Information

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

A nonconformance report was not required for this sample delivery group/work order.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were not required for this sample delivery group/work order.

Additional Comments

There were no additional comments.

System Configuration

The laboratory utilizes the following GC/MS configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through analysis on one of the following columns:

Column ID	Column Description
J&W1	DB-624, 60m x 0.25mm, 1.4um
J&W2	DB-624, 75m x 0.53mm, 3.0um

Instrument Configuration

Instrument systems are reference in the raw data and individual form headers by the Instrument ID designations below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOA1	HP6890/HP5973	J&W1	Trap C
VOA2	HP6890/HP5973	J&W1	Trap C
VOA4	HP5890/HP5972	J&W1	Trap K
VOA5	HP5890/HP5972	J&W1	Trap C
VOA7	HP5890/HP5972	J&W2	Trap K
VOA8	HP6890/HP5973	J&W1	Trap K
VOA9	HP6890/HP5973	J&W1	Trap C

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

77559 -VOA

Page 4 of 4

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: *John Clark*

Date: *04-22-03*

Roadmap for PARS 77559 VOA

This roadmap was analyzed by Debbie Smith on 04-11-2003, 14:39.

This roadmap was reviewed by Sara Jones on 04-14-2003, 15:53.

This roadmap was packaged by LySandra Gathers on 04-18-2003, 13:30.

**GC
SEMIVOLATILE
FID
ANALYSIS**

FID Case Narrative
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77559

Method/Analysis Information

Procedure: **Dissolved Gases by Flame Ionization Detector**
Analytical Method: **SW846 8015A/B SVOC**
Prep Method: **SW846 8015A/B SVOC**
Analytical Batch Number: **242857**
Prep Batch Number: **242856**

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8015A/B SVOC:

Sample ID	Client ID
77559001	ARD2195
77559002	ARD2192
77559003	ARD2185
77559004	ARD2204
1200403144	Method Blank (MB)
1200403146	Laboratory Control Sample (LCS)
1200403145	77559002(ARD2192) Sample Duplicate (DUP)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, Inc. (GEL) as Standard Operating Procedures (SOP).

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this SDG.

CCV Requirements

All calibration verification standard(s) (CVS, ICV or CCV) requirements have been met for this SDG.

Quality Control (QC) Information

Blank Acceptance

The blank(s) analyzed with this SDG met the established acceptance criteria.

Surrogate Recoveries

No surrogate was added to any of the samples in this batch.

LCS Recovery Statement

The Laboratory Control Sample (LCS) spike recoveries for this SDG were within the established acceptance limits.

QC Sample Designation

No matrix spike (MS) or matrix spike duplicate (MSD) were analyzed with this SDG. A sample duplicate was analyzed to measure the precision for this batch.

Duplicate RPD Statement

The relative percent differences (RPD) between the sample and its duplicate were within the acceptable limits.

Technical Information**Holding Time Specifications**

All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

None of the samples in this SDG required dilutions.

Sample Re-prep/Re-analysis

None of the samples in this sample group were reprepped or reanalyzed.

Miscellaneous Information**Nonconformance (NCR) Documentation**

No nonconformance reports (NCRs) have been generated for this SDG.

Manual Integrations

Certain standards and QC samples may have required manual integrations to correctly position the baseline as set in the calibration standard injections. If manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Samples 77559001 (ARD2195), 77559002 (ARD2192) and 77559003 (ARD2185) required manual integrations.

Additional Comments

No additional comments are needed for this sample group.

System Configuration**Chromatographic Columns**

Column ID	Column Description
J&W1	DB-WAX(0.53mm x 0.5u x 30m)
J&W2	DB-624(0.53mm x 3.0u x 30m)
J&W3	DB-1(0.53mm x 1.5u x 30m)
J&W4	DB-608(0.53mm x 0.83u x 30m)
J&W5	GS-Q(0.53mm x 30m)
Phenomenex	ZB-5(0.25mm x 0.25u x 30m)

Instrument Configuration

Instrument ID	System Configuration	Chromatographic Column
FIDa	HP 5890 Series II GC/FID	J&W1/J&W3/J&W4
FID2a	HP 5890 Series II GC/FID	J&W2/J&W5
FID3a	HP 5890 Series II GC/FID	Phenomenex
FID4a	HP 5890 Series II GC/FID	Phenomenex

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

System Configuration

The ICP analysis was performed on a Thermo Jarrell Ash 61E Trace axial-viewing inductively coupled plasma atomic emission spectrometer. The instrument is equipped with a Burgener nebulizer, cyclonic spray chamber, and yttrium internal standard. Operating conditions for the Trace ICP are set at a power level of 950 watts. The instrument has a peristaltic pump flow rate of 140 RPM (2.0 mL/min sample uptake rate), argon gas flows of 15 L/min and 0.5 L/min for the torch and auxiliary gases, and a pressure setting of 26 PSI for the nebulizer.

Calibration Information

Instrument Calibration

The instrument calibrations are conducted using the method and instrument manufacturer's specifications. All initial calibration requirements have been met for this SDG.

CRDL Requirements

All CRDL standard(s) met the referenced advisory control limits.

ICSA/ICSAB statement

All interference check samples (ICSA and ICSAB) associated with this SDG met the established acceptance criteria.

Continuing Calibration Blank (CCB) Requirements

All continuing calibration blanks (CCB) bracketing this batch met the established acceptance criteria.

Continuing Calibration Verification (CCV) Requirements

All continuing calibration verifications (CCV) bracketing this SDG met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Acceptance

The method blank analyzed with this SDG did not contain analytes of interest at concentrations greater than the client required detection limits (CRDL).

LCS Recovery Statement

The laboratory control sample (LCS) met the recommended acceptance criteria for percent recovery (%R) for all elements of interest.

Quality Control (QC) Sample Statement

The following sample was selected as the quality control (QC) sample for this SDG: 77559003 (ARD2185).

Matrix Spike Recovery Statement

The percent recovery (%R) obtained from the MS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. All applicable elements met the acceptance criteria.

Duplicate RPD Statement

The relative percent difference (RPD) obtained from the designated sample duplicate (DUP) is evaluated based on acceptance criteria of 20% when the sample is >5X the contract required detection limit(RL). In cases where either the sample or duplicate value is less than 5X the RL, a control of RL is used to evaluate the DUP results. All applicable analytes met these requirements.

Serial Dilution % Difference Statement

The serial dilution is used to assess interferences due to matrix suppression or enhancement. Raw element concentrations that are at least 50X the instrument detection limit (IDL) for ICP analyses and 100X the IDL for ICP-MS analyses are applicable for serial dilution assessment. All applicable analytes met the acceptance criteria, percent difference value of <10.

Technical Information

Holding Time Specifications

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the GELIMS system by hours. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures performed in association with this SDG followed the Standard Operating Procedure (SOP)

guidelines.

Sample Dilutions

Dilutions are performed to minimize matrix interferences resulting from elevated mineral element concentrations present in soil samples and/or to bring over range target analyte concentrations into the linear calibration range of the instrument. No sample dilutions were needed in this SDG.

Preparation Information

The samples in this SDG were prepared exactly according to the sited SOP.

Miscellaneous Information

Nonconformance Documentation

Nonconformance reports (NCRs) are generated to document procedural anomalies that may deviate from referenced SOP or contractual documents. No NCR was generated with this SDG.

Additional Comments

No additional comments are needed for this sample group.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

CHEMISTRY
ANALYSIS**

General Chemistry Narrative
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77559

Method/Analysis Information

Procedure: Ion Chromatography (IC)
Analytical Method: EPA 300.0
Analytical Batch Number: 243193

Sample Analysis

The following samples were analyzed using the analytical protocol as established in EPA 300.0:

Sample ID	Client ID
77559001	ARD2195
77559002	ARD2192
77559003	ARD2185
77559004	ARD2204
1200403966	Method Blank (MB)
1200403971	Laboratory Control Sample (LCS)
1200403967	77559003(ARD2185) Sample Duplicate (DUP)
1200403969	77559003(ARD2185) Post Spike (PS)

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-086 REV.8.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: Dionex DX300 Ion Chromatograph equipped with a Dionex AS9-HC general purpose anion column

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information**Blank Acceptance**

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recoveries for the laboratory control sample were within the required acceptance limits.

Quality Control

The following sample was designated for Quality Control:
77559003 (ARD2185)

Sample Spike Recovery

The spike recoveries for this sample set were within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Differences between the sample and duplicate for this batch were within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The following samples in this sample group were diluted due to high concentration for sulfate. See the Certificates of Analysis for the individual dilution factors.

1200403967 (ARD2185)

1200403969 (ARD2185)

77559001 (ARD2195)

77559002 (ARD2192)

77559003 (ARD2185)

77559004 (ARD2204)

Miscellaneous Information

Nonconformance Reports

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Method/Analysis Information

Procedure: Total Organic Carbon (TOC)

Analytical Method: SW846 9060

Analytical Batch Number: 244647

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 9060:

Sample ID	Client ID
77559001	ARD2195
77559002	ARD2192
77559003	ARD2185
77559004	ARD2204
1200407396	Method Blank (MB)
1200407401	Laboratory Control Sample (LCS)
1200407398	77559003(ARD2185) Sample Duplicate (DUP)
1200407400	77559003(ARD2185) Post Spike (PS)

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-093 REV.3.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: O-I Analytical Model 1010 Total Organic Carbon Analyzer

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information**Blank Acceptance**

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recovery for the laboratory control sample was within the required acceptance limits.

Quality Control

The following sample was designated for Quality Control:
77559003 (ARD2185)

Sample Spike Recovery

The spike recovery for this sample set was within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Difference between the sample and duplicate for this batch was within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

No samples in this sample group required dilutions.

Miscellaneous Information**Nonconformance Reports**

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Additional Comments

A 15 mg/L Total Inorganic Carbon check standard is analyzed with each analytical run to prove that the instrument is effectively sparging away the inorganic carbon.

Certification Statement

* Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

The above sample is reported on an "as received" basis.

QC Summary

Workorder: 77559

Page 2 of 2

Paramname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
Y	QC Samples were not spiked with this compound.										

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

[^] The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Case Narrative

Sample analyses were conducted using methodology as outlined in General Engineering Laboratories (GEL) Standard Operating Procedures. Any technical or administrative problems during analysis, data review, and reduction are listed below by analytical parameter.

Internal Chain of Custody:

Custody was maintained for all samples.

Data Package:

The enclosed data package contains the following sections: Case Narrative, Qualifier Flag Definitions, Chain of Custody, Cooler Receipt Checklist, GC/MS Volatile Analysis, FID Analysis, Inorganic Analysis, and General Chemistry Analysis.

This data package, to the best of my knowledge, is in compliance with technical and administrative requirements.

Valerie S. Davis
Project Manager

**GC/MS
VOLATILE
ANALYSIS**

GC/MS Volatile Organics
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77111

Method/Analysis Information

Procedure: Volatile Organic Compounds by Gas Chromatograph/Mass Spectrometer
Analytical Method: EPA 524.2
Prep Method: EPA 524.2
Analytical Batch Number: 241844

Sample Analysis

The following client and quality control samples were analyzed to complete this sample delivery group/work order using the methods referenced in the Analysis Information section:

Sample ID	Client ID
77111001	TR2103
77111002	TR2105
77111003	TR2111
77111004	ARD2199
77111005	TR0038
77111006	TR0039
1200400499	Method Blank (MB)
1200400500	Laboratory Control Sample (LCS)
1200401228	Method Blank (MB)
1200401229	Laboratory Control Sample (LCS)

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-022 REV.3.

77111 -VOA

Page 1 of 4

Calibration Information

Due to software limitations, all the data files comprising the initial calibration curve may not be listed on the initial calibration summary form. All calibration files are listed in the calibration history report in the "Standard Data" section.

Initial Calibration

All the initial calibration requirements were met.

Continuing Calibration Verification Requirements

All the calibration verification standard (CCV) requirements were met.

Quality Control (QC) Information

Method Blank Acceptance

Target analytes were not detected above the reporting limit in the blank.

Surrogate Recoveries

Surrogate recoveries, in all samples and quality control samples, were within the acceptance limits.

Laboratory Control Sample Recovery Statement (LCS)

All the required analyte recoveries in the LCS were within the acceptance limits.

QC Sample Designation

Matrix spike analyses were analyzed on a sample of similar matrix in PARS sample delivery group order, # 77035.

Spike Recovery Statement

All the required spike recoveries were within the acceptance limits.

Spike Duplicate Recovery Statement

The matrix spike duplicate recovery was below the acceptance limit for trichloroethylene, possibly due to the high level of trichloroethylene detected in the sample. 1200400502 (TR2106).

Relative Percent Difference Statement (RPD)

The RPD between the matrix spike and matrix spike duplicate was above the acceptance limit for trichloroethylene, possibly due to the high level of trichloroethylene detected in the sample. 1200400501 (TR2106) and 1200400502 (TR2106).

Internal Standard (ISTD) Acceptance

The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information

Holding Time Specifications

All the samples were prepared and/or analyzed within the required holding time period.

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The samples in this sample delivery group/work order did not require dilutions.

Sample Re-prep/Re-analysis

Re-analyses were not required for samples in this sample group/work order.

Miscellaneous Information**Electronic Package Comment**

The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

A nonconformance report was not required for this sample delivery group/work order.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were not required for this sample delivery group/work order.

Additional Comments

There were no additional comments.

System Configuration

The laboratory utilizes the following GC/MS configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through analysis on one of the following columns:

Column ID	Column Description
J&W1	DB-624, 60m x 0.25mm, 1.4um
J&W2	DB-624, 75m x 0.53mm, 3.0um

Instrument Configuration

Instrument systems are reference in the raw data and individual form headers by the Instrument ID designations below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOA1	HP6890/HP5973	J&W1	Trap C
VOA2	HP6890/HP5973	J&W1	Trap C
VOA4	HP5890/HP5972	J&W1	Trap K
VOA5	HP5890/HP5972	J&W1	Trap C
VOA7	HP5890/HP5972	J&W2	Trap K
VOA8	HP6890/HP5973	J&W1	Trap K
VOA9	HP6890/HP5973	J&W1	Trap C

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Page 4 of 4

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

ANALYSIS**

FID Case Narrative
Parsons Engineering Science, Inc. DA CA87-02-D-0005 (PARS)
SDG 77111

Method/Analysis Information

Procedure: Dissolved Gases by Flame Ionization Detector
Analytical Method: SW846 8015A/B SVOC
Prep Method: SW846 8015A/B SVOC
Analytical Batch Number: 242473
Prep Batch Number: 242472

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8015A/B SVOC:

Sample ID	Client ID
77111001	TR2103
77111002	TR2105
77111003	TR2111
77111004	ARD2199
1200402040	Method Blank (MB)
1200402042	Laboratory Control Sample (LCS)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, Inc. (GEL) as Standard Operating Procedures (SOP).

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this SDG.

CCV Requirements

All calibration verification standard(s) (CVS, ICV or CCV) requirements have been met for this SDG.

Quality Control (QC) Information

Blank Acceptance

The blank(s) analyzed with this SDG met the established acceptance criteria.

Surrogate Recoveries

No surrogate was added to any of the samples in this batch.

LCS Recovery Statement

The LCS spike recoveries for this SDG were within the established acceptance limits.

QC Sample Designation

An MS/MSD pair was not performed on any samples contained in this batch. A duplicate of a sample from another SDG was performed to measure precision and accuracy of the batch.

Duplicate RPD Statement

The relative percent differences (RPD) between the sample and its duplicate were within the acceptable limits.

Technical Information**Holding Time Specifications**

GEL assigns holding times based on the associated methodology, which assigns the date and time from sample collection or sample receipt. Those holding times expressed in hours are calculated in the AlphaLIMS system. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

Samples 77111002 (TR2105), 77111003 (TR2111) and 77111004 (ARD2199) were diluted for methane analysis.

Sample Re-prep/Re-analysis

Samples 77111002 (TR2105), 77111003 (TR2111) and 77111004 (ARD2199) were re-analyzed at 1:10 dilution for methane.

Miscellaneous Information**Electronic Package Comment**

This package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. The data validator will always sign and date the case narrative.

Nonconformance (NCR) Documentation

No nonconformance reports (NCRs) have been generated for this SDG.

Manual Integrations

Certain standards and QC samples may have required manual integrations to correctly position the baseline as set in the calibration standard injections. If manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction.

Additional Comments

No additional comments are needed for this sample group.

System Configuration

Chromatographic Columns

Column ID	Column Description
J&W1	DB-WAX(0.53mm x 0.5u x 30m)

FID3a	HP 5890 Series II GC/FID	Phenomenex
FID4a	HP 5890 Series II GC/FID	Phenomenex

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Jinji Cao Date: 4/15/03

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

System Configuration

The ICP analysis was performed on a Perkin Elmer 4300 Optima radial/axial-viewing inductively coupled plasma atomic emission spectrometer. The instrument is equipped with a Burgener nebulizer, cyclonic spray chamber, and yttrium or scandium internal standard. Operating conditions for the ICP are set at a power level of 1500 watts. The instrument has a peristaltic pump flow rate of 1.4L/min, argon gas flows of 15 L/min and 0.2 L/min for the torch and auxiliary gases, and a flow setting of 0.65L/min for the nebulizer.

Calibration Information

Instrument Calibration

The instrument calibrations are conducted using the method and instrument manufacturer's specifications.

All initial calibration requirements have been met for this SDG.

CRDL Requirements

All CRDL standard(s) met the referenced advisory control limits.

ICSA/ICSAB statement

All interference check samples (ICSA and ICSAB) associated with this SDG met the established acceptance criteria.

Continuing Calibration Blank (CCB) Requirements

All continuing calibration blanks (CCB) bracketing this batch met the established acceptance criteria.

Continuing Calibration Blank (CCB) Requirements

All continuing calibration blanks (CCB) bracketing this batch met the established acceptance criteria, with the exception of sodium in CCB6. Samples bracketed by CCB6 either did not contain sodium above the RLD, or sodium was present at concentrations more than ten times the amount present in CCB6.

Quality Control (QC) Information

Method Blank (MB) Acceptance

The method blank analyzed with this SDG did not contain analytes of interest at concentrations greater than the client required detection limits (CRDL).

LCS Recovery Statement

The laboratory control sample (LCS) met the recommended acceptance criteria for percent recovery (%R) for all elements of interest.

Quality Control (QC) Sample Statement

The following sample was selected as the quality control (QC) sample for this batch: 77035005 (TR2106) from PARS SDG 77111.

Matrix Spike Recovery Statement

The percent recovery (%R) obtained from the MS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS met the recommended quality control acceptance criteria for percent recoveries for all applicable analytes.

Duplicate RPD Statement

The relative percent difference (RPD) obtained from the designated sample duplicate (DUP) is evaluated based on acceptance criteria of 20% when the sample is >5X the contract required detection limit(RL). In cases where either the sample or duplicate value is less than 5X the RL, a control of RL is used to evaluate the DUP results. All applicable analytes met these requirements.

Serial Dilution % Difference Statement

The serial dilution is used to assess interferences due to matrix suppression or enhancement. Raw element concentrations that are at least 50X the instrument detection limit (IDL) for ICP analyses and 100X the IDL for ICP-MS analyses are applicable for serial dilution assessment. All applicable analytes met the acceptance criteria, percent difference value of <10.

Technical Information

Holding Time Specifications

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the GELIMS system by hours. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures performed in association with this SDG followed the Standard Operating Procedure (SOP) guidelines. All samples in this SDG were prepared in accordance with the referenced SW-846 procedures.

Sample Dilutions

Dilutions are performed to minimize matrix interferences resulting from elevated mineral element concentrations present in soil samples and/or to bring over range target analyte concentrations into the linear calibration range of the instrument. No sample dilutions were needed in this SDG.

Preparation Information

The samples in this SDG were prepared exactly according to the sited SOP.

Miscellaneous Information

Nonconformance Documentation

Nonconformance reports (NCRs) are generated to document procedural anomalies that may deviate from referenced SOP or contractual documents. No NCR was generated with this SDG.

Additional Comments

No additional comments are needed for this sample group.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

CHEMISTRY
ANALYSIS**

**General Chemistry Narrative
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77111**

Method/Analysis Information

Procedure: Ion Chromatography (IC)

Analytical Method: EPA 300.0

Analytical Batch Number: 241820

Sample Analysis

The following samples were analyzed using the analytical protocol as established in EPA 300.0:

Sample ID	Client ID
77111001	TR2103
77111002	TR2105
77111003	TR2111
77111004	ARD2199
77111007	TR2110
1200400469	Method Blank (MB)
1200400472	Laboratory Control Sample (LCS)
1200400470	77111001(TR2103) Sample Duplicate (DUP)
1200400471	77111001(TR2103) Post Spike (PS)

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-086 REV.8.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: Dionex DX300 Ion Chromatograph equipped with a Dionex AS9-HC general purpose anion column

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information

Blank Acceptance

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recoveries for the laboratory control sample were within the required acceptance limits.

Quality Control

The following sample was designated for Quality Control:
77111001 (TR2103)

Sample Spike Recovery

The spike recoveries for this sample set were within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Differences between the sample and duplicate for this batch were within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The following samples in this sample group were diluted 1:5 due to high concentration for chloride and/or sulfate. See the Certificates of Analysis for the individual dilution factors.

1200400470 (TR2103)

1200400471 (TR2103)

77111001 (TR2103)

77111002 (TR2105)

77111003 (TR2111)

77111004 (ARD2199)

Miscellaneous Information**Nonconformance Reports**

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Method/Analysis Information

Procedure: Total Organic Carbon (TOC)

Analytical Method: SW846 9060

Analytical Batch Number: 243425

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 9060:

Sample ID	Client ID
77111001	TR2103
77111002	TR2105
77111003	TR2111
77111004	ARD2199
1200404509	Method Blank (MB)
1200404514	Laboratory Control Sample (LCS)
1200404511	77111001(TR2103) Sample Duplicate (DUP)
1200404513	77111001(TR2103) Post Spike (PS)

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-093 REV.3.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: O-I Analytical Model 1010 Total Organic Carbon Analyzer

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information**Blank Acceptance**

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recovery for the laboratory control sample was within the required acceptance limits.

Quality Control

The following sample was designated for Quality Control:
77111001 (TR2103)

Sample Spike Recovery

The spike recovery for this sample set was within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Difference between the sample and duplicate for this batch was within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

No samples in this sample group required dilutions.

Miscellaneous Information**Nonconformance Reports**

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Additional Comments

A 15 mg/L Total Inorganic Carbon check standard is analyzed with each analytical run to prove that the instrument is effectively sparging away the inorganic carbon.

Certification Statement

* Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: D.M.J. Date: 4/11/03

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

The above sample is reported on an "as received" basis.

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

The above sample is reported on an "as received" basis.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the Certificate of Analysis.

This data report has been prepared and reviewed in accordance with General Engineering Laboratories, LLC standard operating procedures. Please direct any questions to your Project Manager, Valerie Davis.

QC Summary

Workorder: 77111

Page 2 of 2

Paramname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
-----------	-----	--------	------	----	-------	------	------	-------	-------	------	------

UI Uncertain identification for gamma spectroscopy.

X Lab-specific qualifier - must be fully described in case narrative and data summary package

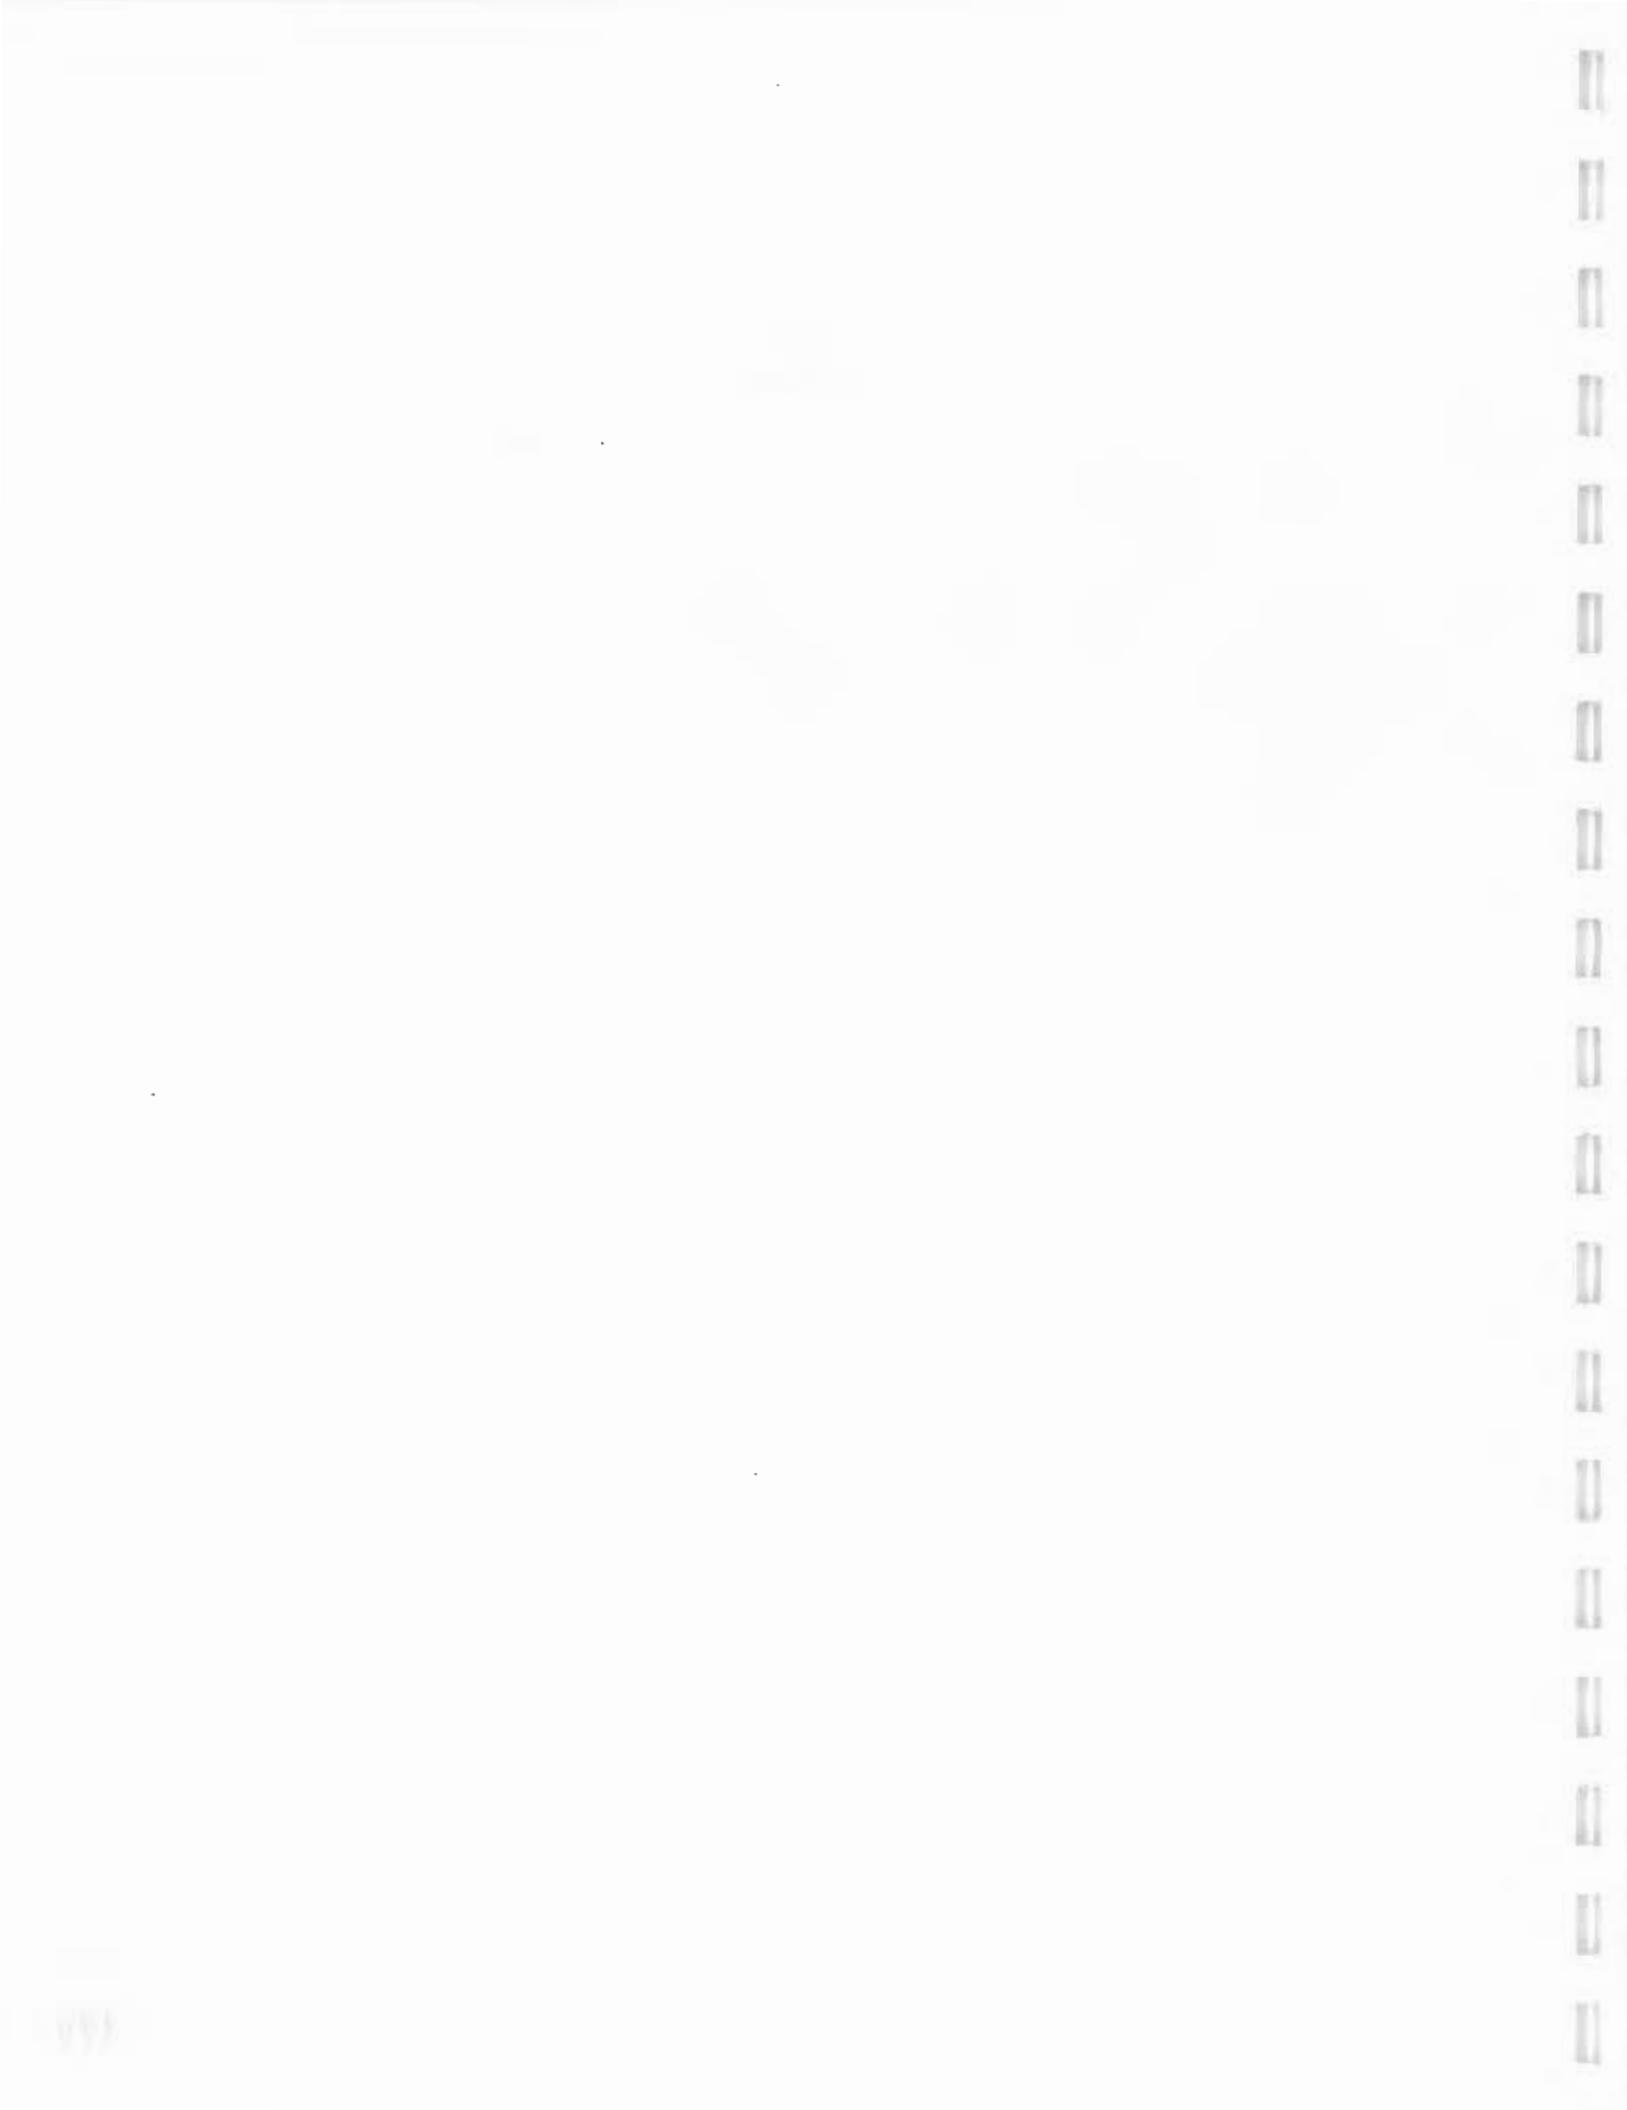

Y QC Samples were not spiked with this compound.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

[^]The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

CASE NARRATIVE
for
Parsons Engineering Science, Inc.
Seneca Army Depot
SDG# 77341

April 15, 2003

Laboratory Identification:

General Engineering Laboratories, LLC

Mailing Address:

P.O. Box 30712
Charleston, South Carolina 29417

Express Mail Delivery and Shipping Address:

2040 Savage Road
Charleston, South Carolina 29414

Telephone Number:

(843) 556-8171

Summary:

Sample receipt

The samples arrived at General Engineering Laboratories, LLC (GEL) Charleston, South Carolina on March 29, 2003, for Environmental Analyses. All sample containers arrived without any visible signs of tampering or breakage. The samples were delivered with chain of custody documentation and signatures.

The laboratory received the following samples:

<u>Laboratory Identification</u>	<u>Sample Description</u>
77341001	ARD2193
77341002	ARD0031
77341003	ARD0033
77341004	ARD2190
77341005	ARD2189
77341006	ARD2200

77230001	TR2100
77230002	ARD2197
77230003	ARD2198

Case Narrative

Sample analyses were conducted using methodology as outlined in General Engineering Laboratories (GEL) Standard Operating Procedures. Any technical or administrative problems during analysis, data review, and reduction are listed below by analytical parameter.

Internal Chain of Custody:

Custody was maintained for all samples.

Data Package:

The enclosed data package contains the following sections: Case Narrative, Qualifier Flag Definitions, Chain of Custody, Cooler Receipt Checklist, GC/MS Volatile Analysis, FID Analysis, Inorganic Analysis, and General Chemistry Analysis.

This data package, to the best of my knowledge, is in compliance with technical and administrative requirements.

Valerie S. Davis
Project Manager

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV.7.

Calibration Information

Due to software limitations, all the data files comprising the initial calibration curve may not be listed on the initial calibration summary form. All calibration files are listed in the calibration history report in the "Standard Data" section.

Initial Calibration

All the initial calibration requirements were met.

Continuing Calibration Verification Requirements

The instrument was calibrated to meet the 8260B initial calibration criteria. Although sample analyses are quantitated using the average response factor generated from the initial calibration, a daily continuing calibration verification (CCV) standard was analyzed to verify the accuracy and acceptability of the multi-point initial calibration. The criteria adopted by the laboratory to determine the acceptability and accuracy of the initial calibration is a $\pm 40\%$ response factor difference for all non-CCC analytes of interest. In the following CCV(s), the following target analyte(s) did not meet the criteria:

<u>Date of CCV</u>	<u>Target Analyte(s)</u>
03/31/03	Acetone Cyclohexanone

The response factor for these target analytes in the CCV was less than the average response factor in the initial calibration. Detection and quantitation of these analytes in samples would be considered biased low. However, the response for each target analyte was sufficient for detection above the required reporting limit.

Quality Control (QC) Information

Method Blank Acceptance

Target analytes were not detected above the reporting limit in the blank.

Surrogate Recoveries

Surrogate recoveries, in all samples and quality control samples, were within the acceptance limits.

Laboratory Control Sample Recovery Statement (LCS)

All the required analyte recoveries in the laboratory control sample were within the acceptance limits, except for the low recoveries for dichlorodifluoromethane, 2-chloroethylvinyl ether, and cyclohexanone. The LCS requirements were still met, since the 5% failure rate permitted by the client was not exceeded.

QC Sample Designation

The following sample was designated for spike analysis: 77341001 (ARD2193).

Spike Recovery Statement

All the required spike recoveries were within the acceptance limits.

Spike Duplicate Recovery Statement

All the required spike recoveries were within the acceptance limits.

77341 -VOA

Page 2 of 4

Relative Percent Difference Statement (RPD)

The RPD between spike recoveries were within the acceptance limits.

Internal Standard (ISTD) Acceptance

The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information**Holding Time Specifications**

All the samples were prepared and/or analyzed within the required holding time period.

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The following samples were diluted because target analyte concentrations exceeded the calibration range:

1200401501 (ARD2193) Matrix Spike	1:10
1200401502 (ARD2193) Matrix Spike Duplicate	1:10
77341001 (ARD2193)	1:10
77341006 (ARD2200)	1:10

Sample Re-prep/Re-analysis

Re-analyses were not required for samples in this sample group/work order for any reason other than dilutions.

Miscellaneous Information**Electronic Package Comment**

The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

A nonconformance report was not required for this sample delivery group/work order.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were not required for this sample delivery group/work order.

Additional Comments

There were no additional comments.

System Configuration

The laboratory utilizes the following GC/MS configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through analysis on one of the following columns:

Column ID	Column Description
J&W1	DB-624, 60m x 0.25mm, 1.4um
J&W2	DB-624, 75m x 0.53mm, 3.0um

Instrument Configuration

Instrument systems are reference in the raw data and individual form headers by the Instrument ID designations below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOA1	HP6890/HP5973	J&W1	Trap C
VOA2	HP6890/HP5973	J&W1	Trap C
VOA4	HP5890/HP5972	J&W1	Trap K
VOA5	HP5890/HP5972	J&W1	Trap C
VOA7	HP5890/HP5972	J&W2	Trap K
VOA8	HP6890/HP5973	J&W1	Trap K
VOA9	HP6890/HP5973	J&W1	Trap C

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

FID
ANALYSIS**

FID Case Narrative
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77341

Method/Analysis Information

Procedure: Dissolved Gases by Flame Ionization Detector
Analytical Method: SW846 8015A/B SVOC
Prep Method: SW846 8015A/B SVOC
Analytical Batch Number: 242476
Prep Batch Number: 242475

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8015A/B SVOC:

Sample ID	Client ID
77341001	ARD2193
77341004	ARD2190
77341005	ARD2189
77341006	ARD2200
1200402047	Method Blank (MB)
1200402049	Laboratory Control Sample (LCS)
1200402048	77341001(ARD2193) Sample Duplicate (DUP)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, Inc. (GEL) as Standard Operating Procedures (SOP).

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this SDG.

CCV Requirements

All calibration verification standard(s) (CVS, ICV or CCV) requirements have been met for this SDG.

Quality Control (QC) Information

Surrogate Recoveries

No surrogate was added to any samples in this batch.

Blank Acceptance

The blank(s) analyzed with this SDG met the established acceptance criteria.

LCS Recovery Statement

The Laboratory Control Sample (LCS) spike recoveries for this SDG were within the established acceptance limits.

QC Sample Designation

No matrix spike (MS) or matrix spike duplicate (MSD) were analyzed with this SDG. A sample duplicate was analyzed to measure the precision for this batch

Duplicate RPD Statement

The relative percent differences (RPD) between the sample and its duplicate were within the acceptable limits.

Technical Information**Holding Time Specifications**

All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

None of the samples in this SDG required dilutions.

Sample Re-prep/Re-analysis

None of the samples in this sample group were reprepped or reanalyzed.

Miscellaneous Information**Nonconformance (NCR) Documentation**

No nonconformance reports (NCRs) have been generated for this SDG.

Manual Integrations

Certain standards and QC samples may have required manual integrations to correctly position the baseline as set in the calibration standard injections. If manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Samples 1200402049 (LCS), 77341004 (ARD2190) and 77341006 (ARD2200) were manually integrated.

Additional Comments

No additional comments are needed for this sample group.

System Configuration**Chromatographic Columns**

Column ID	Column Description
J&W1	DB-WAX(0.53mm x 0.5u x 30m)
J&W2	DB-624(0.53mm x 3.0u x 30m)
J&W3	DB-1(0.53mm x 1.5u x 30m)
J&W4	DB-608(0.53mm x 0.83u x 30m)
J&W5	GS-Q(0.53mm x 30m)
Phenomenex	ZB-5(0.25mm x 0.25u x 30m)

Instrument Configuration

Instrument ID	System Configuration	Chromatographic Column
FIDa	HP 5890 Series II GC/FID	J&W1/J&W3/J&W4
FID2a	HP 5890 Series II GC/FID	J&W2/J&W5
FID3a	HP 5890 Series II GC/FID	Phenomenex
FID4a	HP 5890 Series II GC/FID	Phenomenex

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Jini Cao Date: 4/18/03

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

System Configuration

The ICP analysis was performed on a Thermo Jarrell Ash 61E Trace axial-viewing inductively coupled plasma atomic emission spectrometer. The instrument is equipped with a Burgener nebulizer, cyclonic spray chamber, and yttrium internal standard. Operating conditions for the Trace ICP are set at a power level of 950 watts. The instrument has a peristaltic pump flow rate of 140 RPM (2.0 mL/min sample uptake rate), argon gas flows of 15 L/min and 0.5 L/min for the torch and auxiliary gases, and a pressure setting of 26 PSI for the nebulizer.

Calibration Information

Instrument Calibration

The instrument calibrations are conducted using the method and instrument manufacturer's specifications. All initial calibration requirements have been met for this SDG.

CRDL Requirements

All CRDL standard(s) met the referenced advisory control limits.

ICSA/ICSAB statement

All interference check samples (ICSA and ICSAB) associated with this SDG met the established acceptance criteria.

Continuing Calibration Blank (CCB) Requirements

All continuing calibration blanks (CCB) bracketing this batch met the established acceptance criteria.

Continuing Calibration Verification (CCV) Requirements

All continuing calibration verifications (CCV) bracketing this SDG met the acceptance criteria.

Quality Control (QC) Information

Method Blank (MB) Acceptance

The method blanks analyzed with this SDG did not contain analytes of interest at concentrations greater than the client required detection limits (CRDL).

LCS Recovery Statement

The laboratory control samples (LCS) met the recommended acceptance criteria for percent recovery (%R) for all elements of interest.

Quality Control (QC) Sample Statement

The following sample was selected as the quality control (QC) sample for this batch: 77341001 (ARD2193).

Matrix Spike Recovery Statement

The percent recovery (%R) obtained from the MS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. The MS met the recommended quality control acceptance criteria for percent recoveries for all applicable analytes except potassium, as indicated by the "N" qualifier.

Duplicate RPD Statement

The relative percent difference (RPD) obtained from the designated sample duplicate (DUP) is evaluated based on acceptance criteria of 20% when the sample is >5X the contract required detection limit(RL). In cases where either the sample or duplicate value is less than 5X the RL, a control of RL is used to evaluate the DUP results. All applicable analytes met these requirements.

Serial Dilution % Difference Statement

The serial dilution is used to assess interferences due to matrix suppression or enhancement. Raw element concentrations that are at least 50X the instrument detection limit (IDL) for ICP analyses and 100X the IDL for ICP-MS analyses are applicable for serial dilution assessment. All applicable analytes met the acceptance criteria, percent difference value of <10.

Technical Information

Holding Time Specifications

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the GELIMS system by hours. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures performed in association with this SDG followed the Standard Operating Procedure (SOP) guidelines. All samples in this SDG were prepared in accordance with the referenced SW-846 procedures.

Sample Dilutions

Dilutions are performed to minimize matrix interferences resulting from elevated mineral element concentrations present in soil samples and/or to bring over range target analyte concentrations into the linear calibration range of the instrument. No sample dilutions were needed in this SDG.

Preparation Information

The samples in this SDG were prepared exactly according to the sited SOP.

Miscellaneous Information

Nonconformance Documentation

Nonconformance reports (NCRs) are generated to document procedural anomalies that may deviate from referenced SOP or contractual documents. No NCR was generated with this SDG.

Additional Comments

No additional comments are needed for this sample group.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

1200401090	Laboratory Control Sample (LCS)
1200401086	77341001(ARD2193) Sample Duplicate (DUP)
1200401088	77341001(ARD2193) Post Spike (PS)

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-086 REV.8.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: Dionex DX300 Ion Chromatograph equipped with a Dionex AS9-HC general purpose anion column

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information

Blank Acceptance

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recoveries for the laboratory control sample were within the required acceptance limits.

Quality Control

The following sample was designated for Quality Control:
77341001 (ARD2193)

Sample Spike Recovery

The spike recoveries for this sample set were within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Differences between the sample and duplicate for this batch were within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The following samples in this sample group were diluted due to high concentration for chloride and/or sulfate. See the Certificates of Analysis for the individual dilution factors.

1200401086 (ARD2193)
1200401088 (ARD2193)
77341001 (ARD2193)
77341004 (ARD2190)
77341005 (ARD2189)
77341006 (ARD2200)

Miscellaneous Information**Nonconformance Reports**

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Method/Analysis Information

Procedure: **Total Organic Carbon (TOC)**

Analytical Method: **SW846 9060**

Analytical Batch Number: **244246**

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 9060:

Sample ID	Client ID
77341001	ARD2193
77341004	ARD2190
77341005	ARD2189

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-093 REV.3.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: O-I Analytical Model 1010 Total Organic Carbon Analyzer

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (OC) Information**Blank Acceptance**

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recovery for the laboratory control sample was within the required acceptance limits.

Quality Control

The following samples were designated for Quality Control:

77035005 (TR2106)

77341001 (ARD2193)

Sample Spike Recovery

The spike recoveries for this sample set were within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Differences between the samples and duplicates for this batch were within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

No samples in this sample group required dilutions.

Miscellaneous Information**Nonconformance Reports**

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Additional Comments

A 15 mg/L Total Inorganic Carbon check standard is analyzed with each analytical run to prove that the instrument is effectively sparging away the inorganic carbon.

Certification Statement

* Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

QC Summary

Workorder: 77341

Page 2 of 2

Paramname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anist	Date	Time
-----------	-----	--------	------	----	-------	------	------	-------	-------	------	------

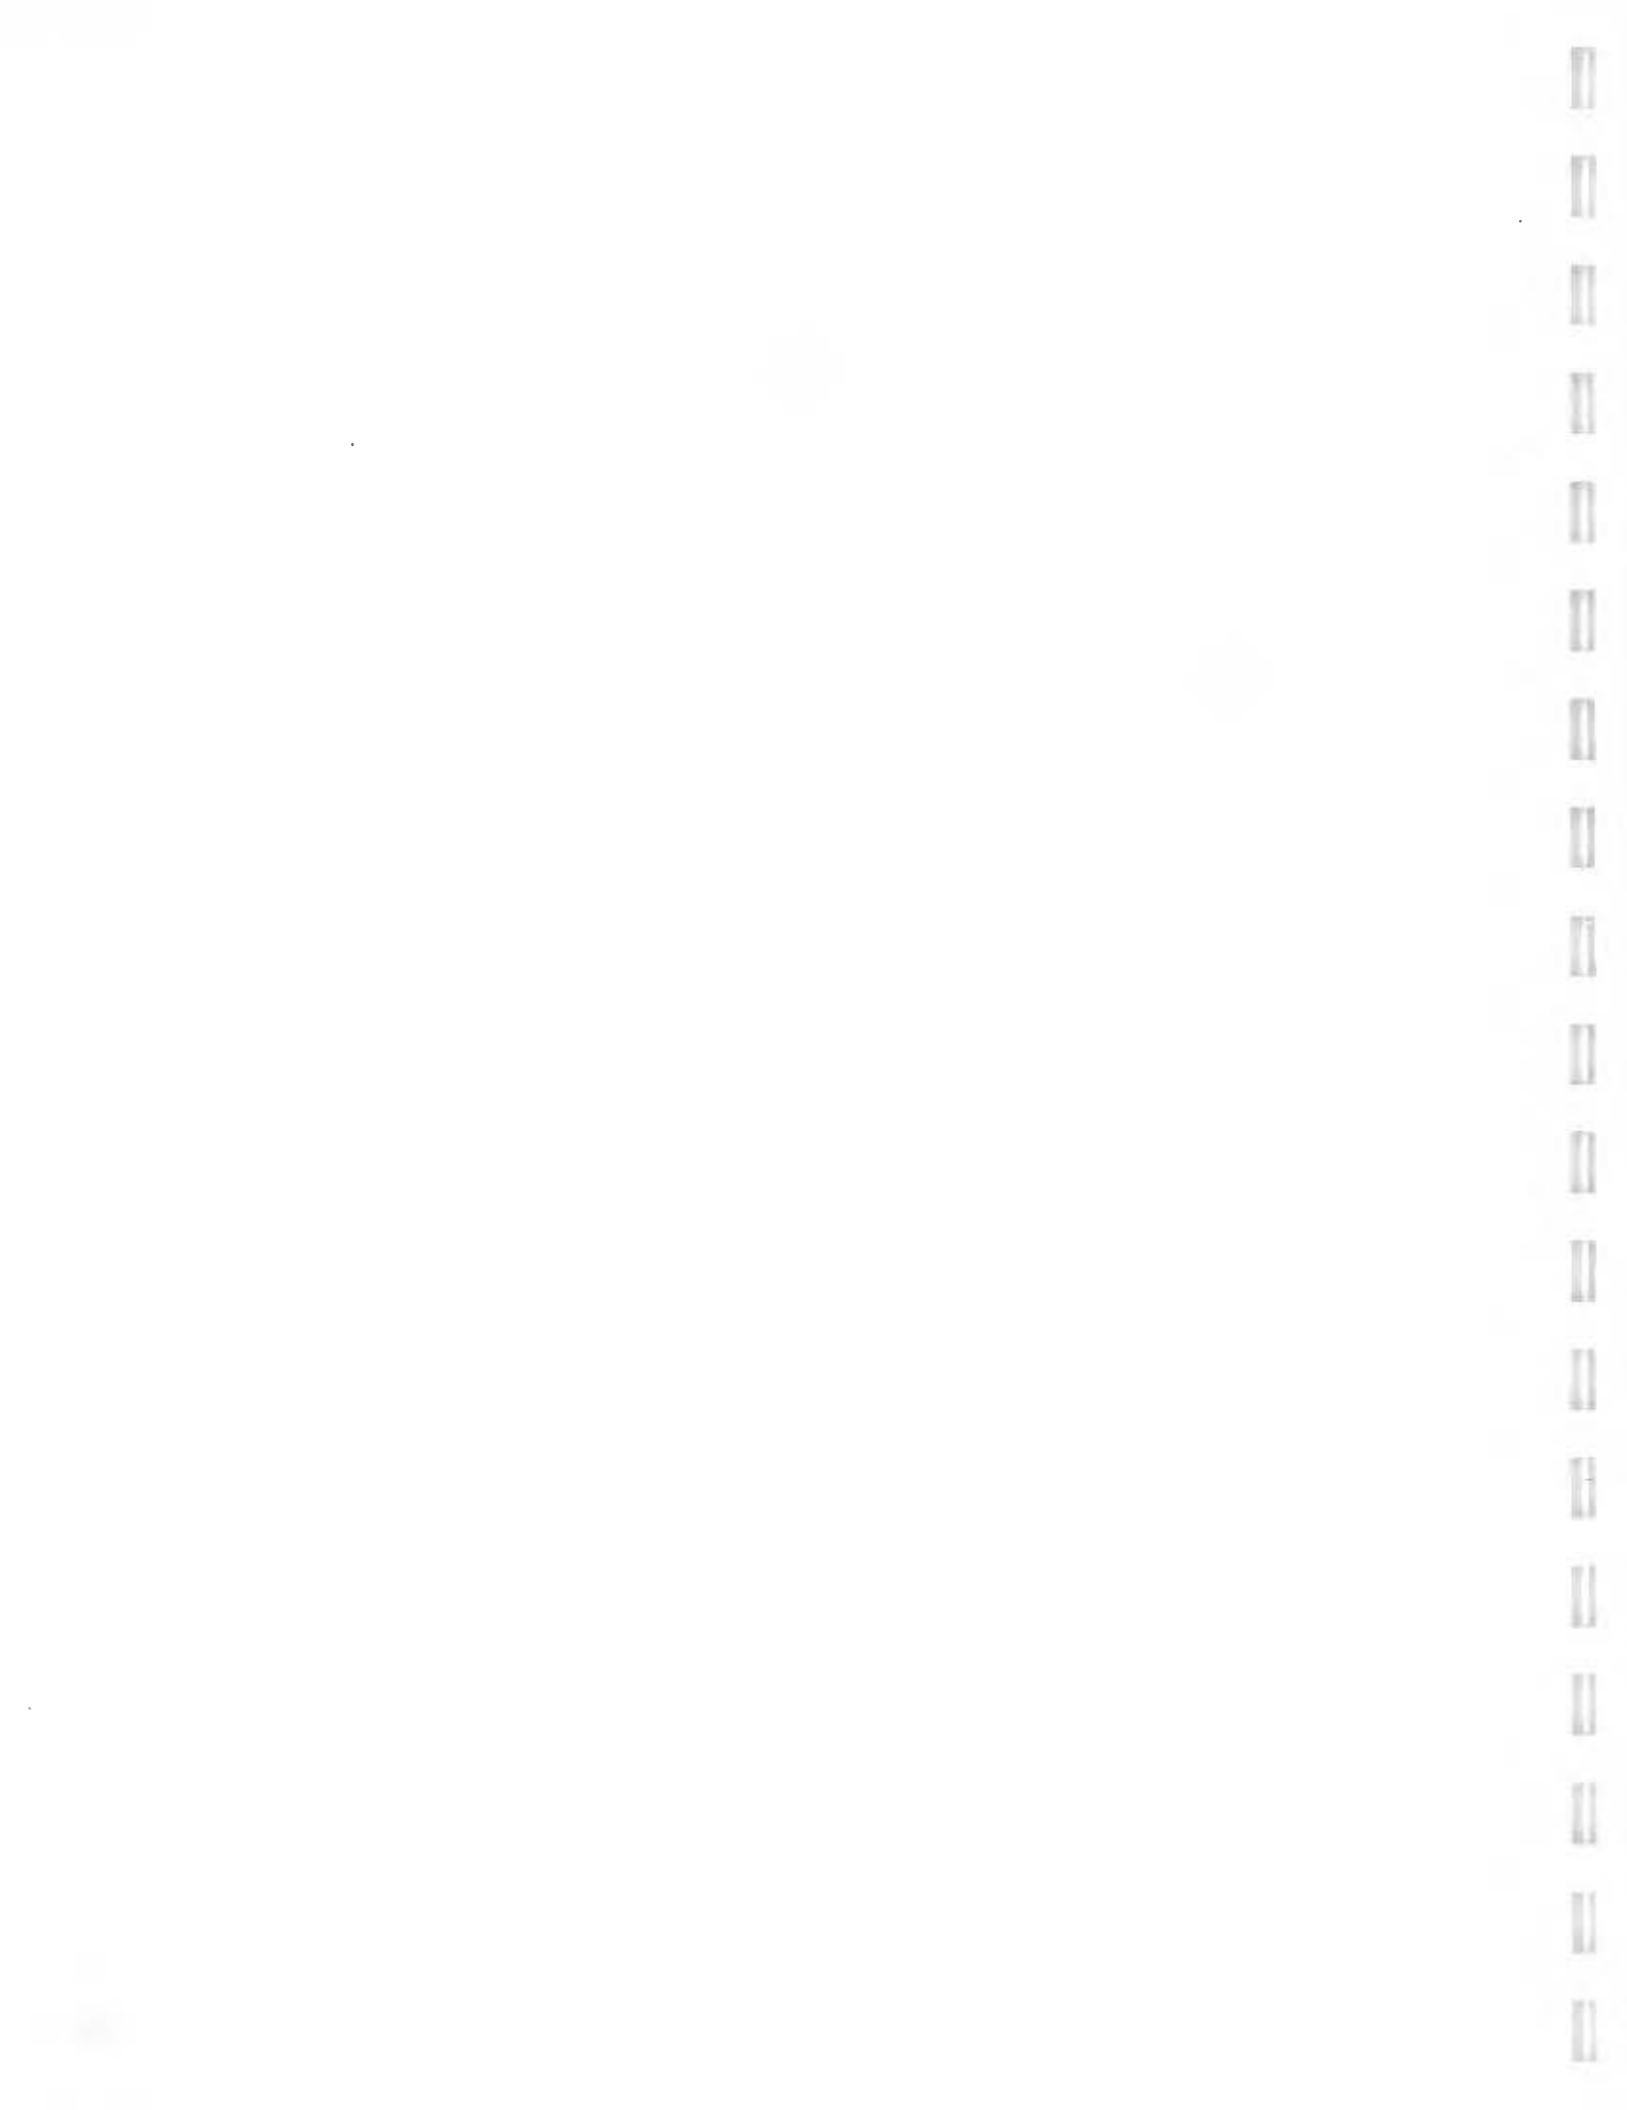

- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

^ The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

CASE NARRATIVE
for
Parsons Engineering Science, Inc.
Seneca Army Depot
SDG# 77228/77230

April 15, 2003

Laboratory Identification:

General Engineering Laboratories, LLC

Mailing Address:

P.O. Box 30712
Charleston, South Carolina 29417

Express Mail Delivery and Shipping Address:

2040 Savage Road
Charleston, South Carolina 29414

Telephone Number:

(843) 556-8171

Summary:

Sample receipt

The samples arrived at General Engineering Laboratories, LLC (GEL) Charleston, South Carolina on March 28, 2003, for Environmental Analyses. All sample containers arrived without any visible signs of tampering or breakage. The samples were delivered with chain of custody documentation and signatures.

The laboratory received the following samples:

<u>Laboratory Identification</u>	<u>Sample Description</u>
77228001	TR2100
77228002	ARD2197
77228003	ARD2198
77228004	TR2102
77228005	TR2109
77228006	ARD2182
77228007	TR0040

Case Narrative

Sample analyses were conducted using methodology as outlined in General Engineering Laboratories (GEL) Standard Operating Procedures. Any technical or administrative problems during analysis, data review, and reduction are listed below by analytical parameter.

Internal Chain of Custody:

Custody was maintained for all samples.

Data Package:

The enclosed data package contains the following sections: Case Narrative, Qualifier Flag Definitions, Chain of Custody, Cooler Receipt Checklist, GC/MS Volatile Analysis, FID Analysis, Inorganic Analysis, and General Chemistry Analysis.

This data package, to the best of my knowledge, is in compliance with technical and administrative requirements.

Valerie S. Davis
Project Manager

GC/MS VOLATILE ANALYSIS

GC/MS Volatile Organics
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77228

Method/Analysis Information

Procedure: Volatile Organic Compounds by Gas Chromatograph/Mass Spectrometer
Analytical Method: EPA 524.2
Prep Method: EPA 524.2
Analytical Batch Number: 243842

Sample Analysis

The following client and quality control samples were analyzed to complete this sample delivery group/work order using the methods referenced in the Analysis Information section:

Sample ID	Client ID
77228004	TR2102
77228005	TR2109
77228006	ARD2182
77228007	TR0040
1200405473	Method Blank (MB)
1200405474	Laboratory Control Sample (LCS)

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-022 REV.3.

Calibration Information

Due to software limitations, all the data files comprising the initial calibration curve may not be listed on the initial calibration summary form. All calibration files are listed in the calibration history report in the "Standard Data" section.

Initial Calibration

All the initial calibration requirements were met.

Continuing Calibration Verification Requirements

All the calibration verification standard (CCV) requirements were met.

Quality Control (QC) Information

Method Blank Acceptance

Target analytes were not detected above the reporting limit in the blank.

Surrogate Recoveries

Surrogate recoveries, in all samples and quality control samples, were within the acceptance limits.

Laboratory Control Sample Recovery Statement (LCS)

All the required analyte recoveries in the LCS were within the acceptance limits.

QC Sample Designation

Matrix spikes analysis were analyzed on a sample of similar matrix in PARS sample delivery group 77559.

Spike Recovery Statement

All the required spike recoveries were within the acceptance limits.

Spike Duplicate Recovery Statement

All the required spike recoveries were within the acceptance limits.

Relative Percent Difference Statement (RPD)

The RPD between spike recoveries were within the acceptance limits.

Internal Standard (ISTD) Acceptance

The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information**Holding Time Specifications**

All the samples were prepared and/or analyzed within the required holding time period.

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The samples in this sample delivery group/work order did not require dilutions.

Miscellaneous Information**Electronic Package Comment**

The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

A nonconformance report was not required for this sample delivery group/work order.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were not required for this sample delivery group/work order.

System Configuration

The laboratory utilizes the following GC/MS configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through analysis on one of the following columns:

Column ID	Column Description
J&W1	DB-624, 60m x 0.25mm, 1.4um
J&W2	DB-624, 75m x 0.53mm, 3.0um

Instrument Configuration

Instrument systems are reference in the raw data and individual form headers by the Instrument ID designations below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOA1	HP6890/HP5973	J&W1	Trap C
VOA2	HP6890/HP5973	J&W1	Trap C
VOA4	HP5890/HP5972	J&W1	Trap K
VOA5	HP5890/HP5972	J&W1	Trap C
VOA7	HP5890/HP5972	J&W2	Trap K
VOA8	HP6890/HP5973	J&W1	Trap K
VOA9	HP6890/HP5973	J&W1	Trap C

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Pat Steele

Date: 04-15-03

Roadmap for PARS 77228 VOA

SDG 77230

Method/Analysis Information

Procedure: Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer
Analytical Method: SW846 8260B
Prep Method: SW846 5030B
Analytical Batch Number: 242254

Sample Analysis

The following client and quality control samples were analyzed to complete this sample delivery group/work order using the methods referenced in the Analysis Information section:

Sample ID	Client ID
77230001	TR2100
77230002	ARD2197
77230003	ARD2198
1200401500	Method Blank (MB)
1200401503	Laboratory Control Sample (LCS)
1200403129	Laboratory Control Sample (LCS)

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV.7.

Calibration Information

Due to software limitations, all the data files comprising the initial calibration curve may not be listed on the initial calibration summary form. All calibration files are listed in the calibration history report in the "Standard Data" section.

Initial Calibration

All the initial calibration requirements were met.

77230 -VOA

Page 1 of 4

Continuing Calibration Verification Requirements

The instrument was calibrated to meet the 8260B initial calibration criteria. Although sample analyses are quantitated using the average response factor generated from the initial calibration, a daily calibration verification standard (CVS) was analyzed to verify the accuracy and acceptability of the multi-point initial calibration. The criteria adopted by the laboratory to determine the acceptability and accuracy of the initial calibration is a \pm 40% response factor difference for all non-CCC analytes of interest. In the following CVS(s), the following target analyte(s) did not meet the criteria:

<u>Date of CVS</u>	<u>Target Analyte(s)</u>
3/31/03	2-Chloroethylvinyl ether Cyclohexanone

The response factor for 2-chloroethylvinyl ether in the CCV was less than the average response factor in the initial calibration. Detection and quantitation of this analyte in samples would be considered biased low. However, the response for the target analyte was sufficient for detection above the required reporting limit.

The response factor for cyclohexanone in the CCV was above the average response factor in the initial calibration. Detection and quantitation of this analyte in samples would be considered biased high.

Quality Control (QC) Information

Method Blank Acceptance

Target analytes were not detected above the reporting limit in the blank.

Surrogate Recoveries

Surrogate recoveries, in all samples and quality control samples, were within the acceptance limits.

Laboratory Control Sample Recovery Statement (LCS)

All the required analyte recoveries in the laboratory control sample were within the acceptance limits, except for the low recoveries for dichlorodifluoromethane, 2-chloroethylvinyl ether, and cyclohexanone. The LCS requirements were still met, since the 5% failure rate permitted by the client was not exceeded.

QC Sample Designation

Matrix spike analyses were analyzed on a sample of similar matrix in PARS sample delivery group order, # 77341.

Spike Recovery Statement

All the required spike recoveries were within the acceptance limits.

Spike Duplicate Recovery Statement

All the required spike recoveries were within the acceptance limits.

Relative Percent Difference Statement (RPD)

The RPD between the sample and duplicate spike recoveries were within the acceptance limits.

Internal Standard (ISTD) Acceptance

The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information

Holding Time Specifications

All the samples were prepared and/or analyzed within the required holding time period.

77230 -VOA

Page 2 of 4

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The samples in this sample delivery group/work order did not require dilutions.

Sample Re-prep/Re-analysis

Re-analyses were not required for samples in this sample group/work order.

Miscellaneous Information**Electronic Package Comment**

The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

A nonconformance report was not required for this sample delivery group/work order.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were not required for this sample delivery group/work order.

Additional Comments

There were no additional comments.

System Configuration

The laboratory utilizes the following GC/MS configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through analysis on one of the following columns:

Column ID	Column Description
J&W1	DB-624, 60m x 0.25mm, 1.4um
J&W2	DB-624, 75m x 0.53mm, 3.0um

77230 -VOA

Page 3 of 4

Instrument Configuration

Instrument systems are reference in the raw data and individual form headers by the Instrument ID designations below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOA1	HP6890/HP5973	J&W1	Trap C
VOA2	HP6890/HP5973	J&W1	Trap C
VOA4	HP5890/HP5972	J&W1	Trap K
VOA5	HP5890/HP5972	J&W1	Trap C
VOA7	HP5890/HP5972	J&W2	Trap K
VOA8	HP6890/HP5973	J&W1	Trap K
VOA9	HP6890/HP5973	J&W1	Trap C

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Joni Clark Date: 04-16-03

Roadmap for PARS 77230 VOA

This roadmap was analyzed by Anson Walsh on 04-02-2003, 15:23.
 This roadmap was reviewed by Crystal Stacey on 04-04-2003, 12:01.
 This roadmap was reviewed by LySandra Gathers on 04-08-2003, 15:25.

ANALYSIS**

FID Case Narrative
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77228

Method/Analysis Information

Procedure: **Dissolved Gases by Flame Ionization Detector**
Analytical Method: **SW846 8015A/B SVOC**
Prep Method: **SW846 8015A/B SVOC**
Analytical Batch Number: **242476**
Prep Batch Number: **242475**

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8015A/B SVOC:

Sample ID	Client ID
77228001	TR2100
77228002	ARD2197
77228003	ARD2198
77228004	TR2102
77228005	TR2109
77228006	ARD2182
1200402047	Method Blank (MB)
1200402049	Laboratory Control Sample (LCS)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, Inc. (GEL) as Standard Operating Procedures (SOP).

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this SDG.

CCV Requirements

All calibration verification standard(s) (CVS, ICV or CCV) requirements have been met for this SDG.

Quality Control (QC) Information

Surrogate Recoveries

No surrogate was added to any samples in this batch.

Blank Acceptance

The blank(s) analyzed with this SDG met the established acceptance criteria.

LCS Recovery Statement

The Laboratory Control Sample (LCS) spike recoveries for this SDG were within the established acceptance limits.

QC Sample Designation

No matrix spike (MS) or matrix spike duplicate (MSD) were analyzed with this SDG. A PARS sample from SDG 77341 and its duplicate was analyzed to measure the precision for this batch. The RPD between the sample and its duplicate met the acceptance criteria.

Technical Information**Holding Time Specifications**

All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

Sample 77228005 (TR2109) was diluted at 1:10 due to the presence of over-range Methane.

Sample Re-prep/Re-analysis

Sample 77228005 (TR2109) was re-analyzed at 1:10 dilution for Methane.

Miscellaneous Information:**Electronic Package Comment**

This package was generated using an electronic data processing program referred to as "virtual packaging". In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from "traditional" packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. The data validator will always sign and date the case narrative.

Nonconformance (NCR) Documentation

No nonconformance reports (NCRs) have been generated for this SDG.

Manual Integrations

Certain standards and QC samples may have required manual integrations to correctly position the baseline as set in the calibration standard injections. If manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Samples 1200402049 (LCS), 77228002 (ARD2197), 77228003 (ARD2198), 77228004 (TR2102) and 77228005 (TR2109) were manually integrated.

Additional Comments

No additional comments are needed for this sample group.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

System Configuration

The ICP analysis was performed on a Perkin Elmer 4300 Optima radial/axial-viewing inductively coupled plasma atomic emission spectrometer. The instrument is equipped with a Burgener nebulizer, cyclonic spray chamber, and yttrium or scandium internal standard. Operating conditions for the ICP are set at a power level of 1500 watts. The instrument has a peristaltic pump flow rate of 1.4L/min, argon gas flows of 15 L/min and 0.2 L/min for the torch and auxiliary gases, and a flow setting of 0.65L/min for the nebulizer.

Calibration Information

Instrument Calibration

The instrument calibrations are conducted using the method and instrument manufacturer's specifications. All initial calibration requirements have been met for this SDG.

CRDL Requirements

All CRDL standard(s) met the referenced advisory control limits.

ICSA/ICSAB statement

All interference check samples (ICSA and ICSAB) associated with this SDG met the established acceptance criteria.

Continuing Calibration Blank (CCB) Requirements

All continuing calibration blanks (CCB) bracketing this batch met the established acceptance criteria.

Continuing Calibration Verification (CCV) Requirements

All continuing calibration verifications (CCV) bracketing this SDG met the acceptance criteria.

Quality Control (QC) Information**Method Blank (MB) Acceptance**

The method blank analyzed with this SDG did not contain analytes of interest at concentrations greater than the client required detection limits (CRDL).

LCS Recovery Statement

The laboratory control sample (LCS) met the recommended acceptance criteria for percent recovery (%R) for all elements of interest.

Quality Control (QC) Sample Statement

The following sample was selected as the quality control (QC) sample for this batch: 77228001 (TR2100).

Matrix Spike Recovery Statement

The percent recovery (%R) obtained from the MS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. All applicable elements met the acceptance criteria.

Duplicate RPD Statement

The relative percent difference (RPD) obtained from the designated sample duplicate (DUP) is evaluated based on acceptance criteria of 20% when the sample is >5X the contract required detection limit(RL). In cases where either the sample or duplicate value is less than 5X the RL, a control of RL is used to evaluate the DUP results. All applicable analytes met these requirements.

Serial Dilution % Difference Statement

The serial dilution is used to assess interferences due to matrix suppression or enhancement. Raw element concentrations that are at least 50X the instrument detection limit (IDL) for ICP analyses and 100X the IDL for ICP-MS analyses are applicable for serial dilution assessment. All applicable analytes met the acceptance criteria, percent difference value of <10 except potassium, as indicated by the "E" qualifier.

Technical Information**Holding Time Specifications**

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the GELIMS system by hours. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures performed in association with this SDG followed the Standard Operating Procedure (SOP)

guidelines. All samples in this SDG were prepared in accordance with the referenced SW-846 procedures.

Sample Dilutions

Dilutions are performed to minimize matrix interferences resulting from elevated mineral element concentrations present in soil samples and/or to bring over range target analyte concentrations into the linear calibration range of the instrument. No sample dilutions were needed in this SDG.

Preparation Information

The samples in this SDG were prepared exactly according to the sited SOP.

Miscellaneous Information

Nonconformance Documentation

Nonconformance reports (NCRs) are generated to document procedural anomalies that may deviate from referenced SOP or contractual documents. No NCR was generated with this SDG.

Additional Comments

No additional comments are needed for this sample group.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Comments:

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information**Blank Acceptance**

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recovery for the laboratory control sample was within the required acceptance limits.

Quality Control

The following sample was designated for Quality Control:
77228001 (TR2100)

Sample Spike Recovery

The spike recovery for this sample set was within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Difference between the sample and duplicate for this batch was within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

No samples in this sample group required dilutions.

Sample Reanalysis

The original matrix QC failed and was reanalyzed with passing results for sample 1200405957 (TR2100).

Miscellaneous Information**Nonconformance Reports**

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Additional Comments

A 15 mg/L Total Inorganic Carbon check standard is analyzed with each analytical run to prove that the instrument is effectively sparging away the inorganic carbon.

Certification Statement

* Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer:  Date: 4/15/03

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package

SW846 8015A/B SVOC	SW846 8015B Dissolved Gases Prep	JMB3	04/01/03	0821	242475

The following Analytical Methods were performed

Method	Description	Analyst Comments
1	SW846 9060	
2	EPA 300.0	
3	EPA 300.0	

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

The above sample is reported on an "as received" basis.

QC Summary

Workorder: 77228

Page 2 of 2

Parmname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
----------	-----	--------	------	----	-------	------	------	-------	-------	------	------

Y QC Samples were not spiked with this compound.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

[^] The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.

Summary:

Sample receipt

The samples arrived at General Engineering Laboratories, LLC (GEL) Charleston, South Carolina on April 2, 2003, for Environmental Analyses. All sample containers arrived without any visible signs of tampering or breakage. The samples were delivered with chain of custody documentation and signatures.

The laboratory received the following samples:

Case Narrative

Sample analyses were conducted using methodology as outlined in General Engineering Laboratories (GEL) Standard Operating Procedures. Any technical or administrative problems during analysis, data review, and reduction are listed below by analytical parameter.

Internal Chain of Custody:

Custody was maintained for all samples.

Data Package:

The enclosed data package contains the following sections: Case Narrative, Qualifier Flag Definitions, Chain of Custody, Cooler Receipt Checklist, GC/MS Volatile Analysis, FID Analysis, Inorganic Analysis, and General Chemistry Analysis.

This data package, to the best of my knowledge, is in compliance with technical and administrative requirements.

Valerie S. Davis
Project Manager

GC/MS Volatile Organics
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77468

Method/Analysis Information

Procedure: Volatile Organic Compounds by Gas Chromatograph/Mass Spectrometer
Analytical Method: EPA 524.2
Prep Method: EPA 524.2
Analytical Batch Number: 243842

Sample Analysis

The following client and quality control samples were analyzed to complete this sample delivery group/work order using the methods referenced in the Analysis Information section:

Sample ID	Client ID
77468001	TR2101
77468002	TR2104
77468003	TR2107
77468007	TR0041
1200405473	Method Blank (MB)
1200405474	Laboratory Control Sample (LCS)

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-022 REV.3.

Calibration Information

Due to software limitations, all the data files comprising the initial calibration curve may not be listed on the initial calibration summary form. All calibration files are listed in the calibration history report in the "Standard Data" section.

77468 -VOA

Page 1 of 4

Initial Calibration

All the initial calibration requirements were met.

Continuing Calibration Verification Requirements

All the calibration verification standard (CCV) requirements were met.

Quality Control (QC) Information**Method Blank Acceptance**

Target analytes were not detected above the reporting limit in the blank.

Surrogate Recoveries

Surrogate recoveries, in all samples and quality control samples, were within the acceptance limits.

Laboratory Control Sample Recovery Statement (LCS)

All the required analyte recoveries in the LCS were within the acceptance limits.

QC Sample Designation

Matrix spikes analysis were analyzed on a sample of similar matrix in PARS sample delivery group, # 77468.

Spike Recovery Statement

All the required spike recoveries were within the acceptance limits.

Spike Duplicate Recovery Statement

All the required spike recoveries were within the acceptance limits.

Relative Per cent Difference Statement (RPD)

The RPD between spike recoveries were within the acceptance limits.

Internal Standard (ISTD) Acceptance

The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information**Holding Time Specifications**

All the samples were prepared and/or analyzed within the required holding time period.

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The samples in this sample delivery group/work order did not require dilutions.

Sample Re-prep/Re-analysis

Re-analyses were not required for samples in this sample group/work order.

Miscellaneous Information

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

A nonconformance report was not required for this sample delivery group/work order.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were not required for this sample delivery group/work order.

Additional Comments

There were no additional comments.

System Configuration

The laboratory utilizes the following GC/MS configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through analysis on one of the following columns:

Column ID	Column Description
J&W1	DB-624, 60m x 0.25mm, 1.4um
J&W2	DB-624, 75m x 0.53mm, 3.0um

Instrument Configuration

Instrument systems are reference in the raw data and individual form headers by the Instrument ID designations below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOA1	HP6890/HP5973	J&W1	Trap C
VOA2	HP6890/HP5973	J&W1	Trap C
VOA4	HP5890/HP5972	J&W1	Trap K

77468 -VOA

Page 3 of 4

VOA5	HP5890/HP5972	J&W1	Trap C
VOA7	HP5890/HP5972	J&W2	Trap K
VOA8	HP6890/HP5973	J&W1	Trap K
VOA9	HP6890/HP5973	J&W1	Trap C

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

**GC/MS
VOLATILE
ANALYSIS**

GC/MS Volatile Organics
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77469

Method/Analysis Information

Procedure: Volatile Organic Compounds (VOC) by Gas Chromatograph/Mass Spectrometer
Analytical Method: SW846 8260B
Prep Method: SW846 5030B
Analytical Batch Number: 244217

Sample Analysis

The following client and quality control samples were analyzed to complete this sample delivery group/work order using the methods referenced in the Analysis Information section:

Sample ID	Client ID
77469001	ARD2188
77469002	ARD2187
77469003	ARD2186
1200407010	Method Blank (MB)
1200407011	Laboratory Control Sample (LCS)
1200406337	77469001(ARD2188) Matrix Spike (MS)
1200406338	77469001(ARD2188) Matrix Spike Duplicate (MSD)

Preparation/Analytical Method Verification

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-OA-E-038 REV.7.

Calibration Information

Due to software limitations, all the data files comprising the initial calibration curve may not be listed on the initial calibration summary form. All calibration files are listed in the calibration history report in the "Standard Data" section.

Initial Calibration

All the initial calibration requirements were met.

Continuing Calibration Verification Requirements

The instrument was calibrated to meet the 8260B initial calibration criteria. Although sample analyses are quantitated using the average response factor generated from the initial calibration, a daily continuing calibration verification standard (CCV) was analyzed to verify the accuracy and acceptability of the multi-point initial calibration. The criteria adopted by the laboratory to determine the acceptability and accuracy of the initial calibration is a \pm 40% response factor difference for all non-CCC analytes of interest. In the following CCV, the following target analyte(s) did not meet the criteria:

<u>Date of CCV</u>	<u>Target Analyte(s)</u>
04/10/03	Cyclohexanone

The response factor this target analyte in the CCV was above the average response factors in the initial calibration. Detection and quantitation of this analyte in samples would be considered biased high.

Quality Control (QC) Information**Method Blank Acceptance**

Target analytes were not detected above the reporting limit in the blank.

Surrogate Recoveries

Surrogate recoveries, in all samples and quality control samples, were within the acceptance limits.

Laboratory Control Sample Recovery Statement (LCS)

All the required analyte recoveries in the LCS were within the acceptance limits.

QC Sample Designation

The following sample was designated for spike analysis: 77469001 (ARD2188).

Spike Recovery Statement

All the required spike recoveries were within the acceptance limits.

Spike Duplicate Recovery Statement

All the required spike recoveries were within the acceptance limits.

Relative Percent Difference Statement (RPD)

The RPD between spike recoveries were within the acceptance limits.

Internal Standard (ISTD) Acceptance

The internal standard responses, in all samples and quality control samples, met the required acceptance criteria.

Technical Information**Holding Time Specifications**

All the samples were prepared and/or analyzed within the required holding time period.

Sample Preservation and Integrity

All samples met the sample preservation and integrity requirements.

Preparation/Analytical Method Verification
All procedures were performed as stated in the SOP.

Sample Dilutions

The following samples were diluted because target analyte concentrations exceeded the calibration range:

1200406337 (ARD2188) Matrix Spike	1:5
1200406338 (ARD2188) Matrix Spike Duplicate	1:5
77469001 (ARD2188)	1:5

Sample Re-prep/Re-analysis

Re-analyses were not required for samples in this sample group/work order.

Miscellaneous Information

Electronic Package Comment

The following package was generated using an electronic data processing program referred to as virtual packaging. In an effort to increase quality and efficiency, the laboratory is developing systems to eventually generate all data packages electronically. The following change from traditional packages should be noted:

Analyst/peer reviewer initials and dates are not present on the electronic data files. Presently, all initials and dates are present on the original raw data. These hard copies are temporarily stored in the laboratory. An electronic signature page inserted after the case narrative of each electronic package will indicate the analyst, reviewer, and report specialist names associated with the generation of the data and package. The data validator will always sign and date the case narrative. Data that are not generated electronically, such as hand written pages, will be scanned and inserted into the electronic package.

Nonconformance (NCR) Documentation

A nonconformance report was not required for this sample delivery group/work order.

Manual Integrations

Data files associated with the initial calibration, continuing calibration check, and samples did not require manual integrations.

TIC Comment

Tentatively identified compounds (TIC) were not required for this sample delivery group/work order.

Additional Comments

There were no additional comments.

System Configuration

The laboratory utilizes the following GC/MS configurations:

Chromatographic Columns

Chromatographic separation of volatile components is accomplished through analysis on one of the following columns:

Column ID	Column Description
J&W1	DB-624, 60m x 0.25mm, 1.4um
J&W2	DB-624, 75m x 0.53mm, 3.0um

Instrument Configuration

Instrument systems are reference in the raw data and individual form headers by the Instrument ID designations below:

Instrument ID	System Configuration	Chromatographic Column	P & T Trap
VOA1	HP6890/HP5973	J&W1	Trap C
VOA2	HP6890/HP5973	J&W1	Trap C
VOA4	HP5890/HP5972	J&W1	Trap K
VOA5	HP5890/HP5972	J&W1	Trap C
VOA7	HP5890/HP5972	J&W2	Trap K
VOA8	HP6890/HP5973	J&W1	Trap K
VOA9	HP6890/HP5973	J&W1	Trap C

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

77469 -VOA

Page 4 of 4

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: J.W. Aar

Date: 04-22-03

Roadmap for PARS 77469 VOA

This roadmap was analyzed by Sara Jones on 04-11-2003, 08:40.
 This roadmap was reviewed by Debbie Smith on 04-14-2003, 14:14.
 This roadmap was packaged by LySandra Gathers on 04-14-2003, 17:27.

ANALYSIS**

FID Case Narrative
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77468

Method/Analysis Information

Procedure: Dissolved Gases by Flame Ionization Detector
Analytical Method: SW846 8015A/B SVOC
Prep Method: SW846 8015A/B SVOC
Analytical Batch Number: 242857
Prep Batch Number: 242856

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 8015A/B SVOC:

Sample ID	Client ID
77468001	TR2101
77468002	TR2104
77468003	TR2107
77468004	ARD2188
77468005	ARD2187
77468006	ARD2186
1200403144	Method Blank (MB)
1200403146	Laboratory Control Sample (LCS)

Preparation/Analytical Method Verification

Procedures for preparation, analysis, and reporting of analytical data are documented by General Engineering Laboratories, Inc. (GEL) as Standard Operating Procedures (SOP).

Calibration Information

Initial Calibration

All initial calibration requirements have been met for this SDG.

CCV Requirements

All calibration verification standard(s) (CVS, ICV or CCV) requirements have been met for this SDG.

Quality Control (QC) Information

Blank Acceptance

The blank(s) analyzed with this SDG met the established acceptance criteria.

Surrogate Recoveries

No surrogate was added to any of the samples in this batch.

LCS Recovery Statement

The Laboratory Control Sample (LCS) spike recoveries for this SDG were within the established acceptance limits.

QC Sample Designation

No matrix spike (MS) or matrix spike duplicate (MSD) were analyzed with this SDG. A PARS sample from SDG 77559 and its duplicate was analyzed to measure the precision for this batch. The RPD between the sample and its duplicate met the acceptance criteria.

Technical Information**Holding Time Specifications**

All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

Samples 77468001 (TR2101) (1:10), 77468002 (TR2104) (1:20) and 77468003 (TR2107) (1:10) were diluted due to the presence of over-range target analytes.

Sample Re-prep/Re-analysis

Samples 77468001 (TR2101), 77468002 (TR2104) and 77468003 (TR2107) were re-analyzed at dilutions for Methane.

Miscellaneous Information**Nonconformance (NCR) Documentation**

No nonconformance reports (NCRs) have been generated for this SDG.

Manual Integrations

Certain standards and QC samples may have required manual integrations to correctly position the baseline as set in the calibration standard injections. If manual integrations were performed, copies of all manual integration peak profiles are included in the raw data section of this fraction. Samples 77468001 (TR2101), 77468002 (TR2104), 77468004 (ARD2188) and 77468005 (ARD2187) required manual integrations.

Additional Comments

No additional comments are needed for this sample group.

System Configuration**Chromatographic Columns**

Column ID	Column Description
J&W1	DB-WAX(0.53mm x 0.5u x 30m)
J&W2	DB-624(0.53mm x 3.0u x 30m)
J&W3	DB-1(0.53mm x 1.5u x 30m)
J&W4	DB-608(0.53mm x 0.83u x 30m)

J&W5 GS-Q(0.53mm x 30m)
Phenomenex ZB-5(0.25mm x 0.25u x 30m)

FID3a	HP 5890 Series II GC/FID	Phenomenex
FID4a	HP 5890 Series II GC/FID	Phenomenex

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Reviewer: Trini Cao Date: 4/21/03

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

System Configuration

The ICP analysis was performed on a Thermo Jarrell Ash 61E Trace axial-viewing inductively coupled plasma atomic emission spectrometer. The instrument is equipped with a Burgener nebulizer, cyclonic spray chamber, and yttrium internal standard. Operating conditions for the Trace ICP are set at a power level of 950 watts. The instrument has a peristaltic pump flow rate of 140 RPM (2.0 mL/min sample uptake rate), argon gas flows of 15 L/min and 0.5 L/min for the torch and auxiliary gases, and a pressure setting of 26 PSI for the nebulizer.

Calibration Information

Instrument Calibration

The instrument calibrations are conducted using the method and instrument manufacturer's specifications. All initial calibration requirements have been met for this SDG.

CRDL Requirements

All CRDL standard(s) met the referenced advisory control limits.

ICSA/ICSAB statement

All interference check samples (ICSA and ICSAB) associated with this SDG met the established acceptance criteria.

Continuing Calibration Blank (CCB) Requirements

All continuing calibration blanks (CCB) bracketing this batch met the established acceptance criteria.

Continuing Calibration Verification (CCV) Requirements

All continuing calibration verifications (CCV) bracketing this SDG met the acceptance criteria.

Quality Control (QC) Information**Method Blank (MB) Acceptance**

The method blank analyzed with this SDG did not contain analytes of interest at concentrations greater than the client required detection limits (CRDL).

LCS Recovery Statement

The laboratory control sample (LCS) met the recommended acceptance criteria for percent recovery (%R) for all elements of interest.

Quality Control (QC) Sample Statement

The following samples were selected as the quality control (QC) samples for this batch: 77468001 (TR2101).

Matrix Spike Recovery Statement

The percent recovery (%R) obtained from the MS analyses are evaluated when the sample concentration is less than four times (4X) the spike concentration added. All applicable elements met the acceptance criteria.

Duplicate RPD Statement

The relative percent difference (RPD) obtained from the designated sample duplicate (DUP) is evaluated based on acceptance criteria of 20% when the sample is >5X the contract required detection limit(RL). In cases where either the sample or duplicate value is less than 5X the RL, a control of RL is used to evaluate the DUP results. All applicable analytes met these requirements.

Serial Dilution % Difference Statement

The serial dilution is used to assess interferences due to matrix suppression or enhancement. Raw element concentrations that are at least 50X the instrument detection limit (IDL) for ICP analyses and 100X the IDL for ICP-MS analyses are applicable for serial dilution assessment. All applicable analytes met the acceptance criteria, percent difference value of <10.

Technical Information**Holding Time Specifications**

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the GELIMS system by hours. Those holding times expressed as days expire at midnight on the day of expiration. All samples in this SDG met the specified holding time requirements.

Preparation/Analytical Method Verification

All procedures performed in association with this SDG followed the Standard Operating Procedure (SOP) guidelines.

Sample Dilutions

Dilutions are performed to minimize matrix interferences resulting from elevated mineral element concentrations present in soil samples and/or to bring over range target analyte concentrations into the linear calibration range of the instrument. Sample 77468004 (ARD2188) required dilution in order to bring sodium within the linear calibration range of the instrument.

Preparation Information

The samples in this SDG were prepared exactly according to the sited SOP.

Miscellaneous Information**Nonconformance Documentation**

Nonconformance reports (NCRs) are generated to document procedural anomalies that may deviate from referenced SOP or contractual documents. No NCR was generated with this SDG.

Additional Comments

No additional comments are needed for this sample group.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

**GENERAL
CHEMISTRY
ANALYSIS**

General Chemistry Narrative
Parsons Engineering Science, Inc. DACA87-02-D-0005 (PARS)
SDG 77468

Method/Analysis Information

Procedure: **Ion Chromatography (IC)**

Analytical Method: **EPA 300.0**

Analytical Batch Number: **242925**

Sample Analysis

The following samples were analyzed using the analytical protocol as established in EPA 300.0:

Sample ID	Client ID
77468001	TR2101
77468002	TR2104
77468003	TR2107
77468004	ARD2188
77468005	ARD2187
77468006	ARD2186
1200403321	Method Blank (MB)
1200403328	Laboratory Control Sample (LCS)
1200403324	77468001(TR2101) Sample Duplicate (DUP)
1200403327	77468001(TR2101) Post Spike (PS)

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-B-086 REV.8.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: Dionex DX300 Ion Chromatograph equipped with a Dionex AS9-HC general purpose anion column

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information

Blank Acceptance

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recoveries for the laboratory control sample were within the required acceptance limits.

Quality Control

The following sample was designated for Quality Control:
77468001 (TR2101)

Sample Spike Recovery

The spike recoveries for this sample set were within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Differences between the sample and duplicate for this batch were within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

The following samples in this sample group were diluted due to high concentration for chloride and/or sulfate. See the Certificates of Analysis for the individual dilution factors.

1200403324 (TR2101)

1200403327 (TR2101)

77468001 (TR2101)

77468002 (TR2104)

77468003 (TR2107)

77468004 (ARD2188)

77468005 (ARD2187)

77468006 (ARD2186)

Miscellaneous Information**Nonconformance Reports**

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Method/Analysis Information

Procedure: Total Organic Carbon (TOC)

Analytical Method: SW846 9060

Analytical Batch Number: 244647

Sample Analysis

The following samples were analyzed using the analytical protocol as established in SW846 9060:

Sample ID	Client ID
77468001	TR2101
77468002	TR2104
77468003	TR2107
77468004	ARD2188
77468005	ARD2187
77468006	ARD2186
1200407396	Method Blank (MB)
1200407401	Laboratory Control Sample (LCS)
1200407398	77559003(ARD2185) Sample Duplicate (DUP)
1200407400	77559003(ARD2185) Post Spike (PS)

SOP Reference

Procedure for preparation, analysis and reporting of analytical data are controlled by General Engineering Laboratories, LLC as Standard Operating Procedure (SOP). The data discussed in this narrative has been analyzed in accordance with GL-GC-E-093 REV.3.

Preparation/Analytical Method Verification

The SOP stated above has been prepared based on technical research and testing conducted by General Engineering Laboratories, Inc. and with guidance from the regulatory documents listed in this "Method/Analysis Information" section.

Calibration Information

The instrument used in this analysis was the following: O-I Analytical Model 1010 Total Organic Carbon Analyzer

Initial Calibration

The instrument was properly calibrated.

Continuing Calibration Blanks

All continuing calibration blanks (CCBs) associated with reported data from this batch were within acceptance limits.

Calibration Verification Information (CCV)

All continuing calibration verification standards (CCVs) associated with reported data from this batch were within acceptance limits.

Quality Control (QC) Information**Blank Acceptance**

The method blank associated with this data was within the required acceptance limits.

Laboratory Control Sample (LCS) Recovery

The recovery for the laboratory control sample was within the required acceptance limits.

Quality Control

The following sample was designated for Quality Control:
77559003 (ARD2185)

Sample Spike Recovery

The spike recovery for this sample set was within the required acceptance limits.

Sample Duplicate Acceptance

The Relative Percent Difference between the sample and duplicate for this batch was within the required acceptance limits.

Technical Information

GEL assigns holding times based on the date and time of sample collection. Those holding times expressed in hours are calculated in the AlphaLims system by hours. Those holding times expressed as days expire at midnight on the day of expiration.

Holding Times

All samples from this sample group were analyzed within the required holding time for this method.

Preparation/Analytical Method Verification

All procedures were performed as stated in the SOP.

Sample Dilutions

No samples in this sample group required dilutions.

Miscellaneous Information**Nonconformance Reports**

No Nonconformance Reports (NCR) were required for any of the samples in this sample group for this analysis.

Additional Comments

A 15 mg/L Total Inorganic Carbon check standard is analyzed with each analytical run to prove that the instrument is effectively sparging away the inorganic carbon.

Certification Statement

* Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Review Validation:

GEL requires all analytical data to be verified by a qualified data validator. In addition, all data designated for CLP or CLP-like packaging will receive a third level validation upon completion of the data package.

The following data validator verified the information presented in this case narrative:

Notes:

The Qualifiers in this report are defined as follows :

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

The above sample is reported on an "as received" basis.

- < Actual result is less than amount reported
- > Actual result is greater than amount reported
- B Analyte found in the sample as well as the associated blank.
- BD Flag for results below the MDC or a flag for low tracer recovery.
- E Concentration exceeds instrument calibration range
- H Holding time exceeded
- J Indicates an estimated value. The result was greater than the detection limit, but less than the reporting limit.
- P The response between the confirmation column and the primary column is >40%D
- U Indicates the compound was analyzed for but not detected above the detection limit
- UI Uncertain identification for gamma spectroscopy.
- X Lab-specific qualifier - must be fully described in case narrative and data summary package
- Y QC Samples were not spiked with this compound.

The above sample is reported on an "as received" basis.

QC Summary

Workorder: 77468

Page 2 of 2

Paramname	NOM	Sample	Qual	QC	Units	RPD%	REC%	Range	Anlst	Date	Time
-----------	-----	--------	------	----	-------	------	------	-------	-------	------	------

Y QC Samples were not spiked with this compound.

N/A indicates that spike recovery limits do not apply when sample concentration exceeds spike conc. by a factor of 4 or more.

[^] The Relative Percent Difference (RPD) obtained from the sample duplicate (DUP) is evaluated against the acceptance criteria when the sample is greater than five times (5X) the contract required detection limit (RL). In cases where either the sample or duplicate value is less than 5X the RL, a control limit of +/- the RL is used to evaluate the DUP result.

For PS, PSD, and SDILT results, the values listed are the measured amounts, not final concentrations.

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless qualified on the QC Summary.
