Base Closure Division Army Chief of Staff for Installation Management

EXECUTIVE SUMMARY

Parsons, under contract to the Army, has prepared this Environmental Condition of Property (ECP) Report Update for several previously retained parcels within the Conservation/Recreation Area, hereinafter referred to as the "Property". The Property is located within the Seneca Army Depot Activity (SEDA) in Romulus, New York. The Property encompasses approximately 283 acres and includes six previously retained parcels. The Army currently owns the land and buildings on the Property. The purpose of this ECP Report Update is to update the *U.S. Army Base Realignment and Closure 95 Program, Environmental Baseline Survey (EBS) Report, Seneca Army Depot Activity, New York, March 1997.* This update evaluates the current conditions relative to the original EBS and recommends changes in property category for several of the previously retained parcels within the Conservation/Recreation Area.

This ECP Report Update was prepared in accordance with 42 USC §9620(h)(4), Army Regulation 200-1 (December 27, 2007), the Department of Defense (DoD) *Base Redevelopment and Realignment Manual* (DoD 4165.77-M) and is in general conformance with the American Society for Testing and Materials (ASTM) Designation D 6008-96 (2014), *Standard Practice for Conducting Environmental Baseline Surveys* and ASTM D5746-98 (2016), *Standard Classification of Environmental Condition of Property Area Types for Defense Base Closure and Realignment Facilities*.

For purposes of planning the redevelopment and supporting the transfer of the property at SEDA, the Army and the Seneca County Industrial Development Agency (SCIDA) established plans to transfer certain property initially and retained 14 sites pending the completion of necessary remedial actions to be transferred at a later date. Of the 14 previously retained parcels, the property to be transferred consists of six parcels where the Army has completed remedial investigation and remedial action.

The SEDA was a munitions, general supplies and special weapons depot from 1941 to 2000. In addition, the SEDA mission has included the demilitarization and destruction of munitions. Although the munitions normally stored at SEDA were conventional, from the 1950s to 1993 the mission included the storage and maintenance of special weapons.

The Depot's mission changed in early 1995 when the DoD recommended closure of the SEDA under its Base Realignment and Closure (BRAC) process. This recommendation was approved by Congress on September 28, 1995 and the Depot was closed in the year 2000.

RECOGNIZED ENVIRONMENTAL CONDITIONS

The original EBS identified various Recognized Environmental Conditions (RECs) associated with the Property. These were summarized in the report and are presented in **Appendix A**. This ECP Update includes the following changes to identified RECs as a result of this ECP Report Update:

- SEAD 12C LUCs Area: A portion of SEAD 12C around building 813/814 was remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of land use controls (LUCs). Land that underlies two unoccupied buildings (Buildings 813 and 814) and that is in the vicinity of former monitoring well MW12-37, was contaminated with volatile organic compounds (VOCs), primarily trichloroethene (TCE) at levels exceeding federal and state groundwater drinking water standards and state soil cleanup objective (SCO) levels. During a non-time critical removal action, the soil in the vicinity of MW12-37 was removed down to bedrock (approximately 3ft bgs) and the excavation and excavated soil were aerated. Potential vapor intrusion and groundwater recontamination concerns that remained in the vicinity of Buildings 813 and 814 as a result of being unable to excavate all TCE-contaminated soil from under Building 813 were addressed in the Final Record of Decision the Radioactive Waste Burial Sites (SEAD-12) and the Mixed Waste Storage Facility (SEAD-72) (Parsons, 2015) through the selection of appropriate land use restrictions. These LUCs include groundwater use restrictions, building use restrictions (due to vapor intrusion risks), and residential housing and school restrictions within the LUCs area of SEAD 12C (Buildings 813/814 only).
- SEAD 46 LUCs Area: The SEAD 46, Small Arms Firing Range (Former 3.5-inch Rocket Range), portion of the property was remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. Although munitions removal was performed at the SEAD 46, the potential exists that MPPEH may remain at and could pose hazards to a future receptor. Munitions Responses removed 2,054 targets of which none were classified as MEC, 16 items were classified as MPPEH but were determined to be MD after perforating. MPPEH found at the site included illumination flares, fuzes, smoke signals, an M83 cluster bomb, and a 40 mm practice grenade. MPPEH in surface and subsurface soil is therefore a potentially complete pathway. The Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017) selected appropriate land use restriction to include residential use and intrusive activity restrictions within SEAD 46.
- SEAD 13 LUCs Area: The SEAD 13 portions of the property were remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. The mini risk assessment conducted at SEAD-13 concluded that the total non-cancer hazard index (HI) from all exposure routes is less than 1 for the construction worker, but exceeds 1 for the park worker (HI=4) and the recreational visitor (HI=2). The elevated HI for both receptors is due to ingestion of groundwater, with nitrate/nitrite-nitrogen, aluminum, and manganese in groundwater as the largest contributors of risk for both land uses. When the groundwater pathway is eliminated, the total hazard indices for these receptors are 0.008 and 0.006, meeting the EPA hazard index criteria of less than 1. Therefore, groundwater use restrictions were recommended for SEAD 13. The Final Decision Document Mini Risk Assessment for SEAD 13, Inhibited Red Fuming Nitric Acid (IRFNA) Disposal Site (Parsons,

2004) selected appropriate land use restriction to include groundwater use restrictions at SEAD 13.

- **SEAD 002-R-01 LUCs Area:** The SEAD 002-R-01(EOD-2 and EOD-3) portions of the property were remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. Although a munitions removal was performed at the SEAD 002-R-01 MRS, the potential exists that MPPEH may remain at and could pose hazards to a future receptor. MPPEH in surface and subsurface soil is therefore a potentially complete pathway. The Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017) selected appropriate land use restriction to include residential use and intrusive activity restrictions within SEAD 002-R-01.
- SEAD 003-R-01 LUCs Area: The SEAD 003-R-01 MRS, alias SEAD-57, the former Explosive Ordnance Disposal Area (EOD-1) property, was remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. Munitions responses removed 7,485 targets of which 2 were classified as MEC. Three other MEC items were found at this site during an EE/CA prior to the removal action. MEC items removed during previous studies included two MK II Grenades, two 20mm projectiles, and one fuzed unfired 37mm projectile. Although a munitions removal was performed at the SEAD 003-R-01 MRS, the potential exists that MPPEH may remain at and could pose hazards to a future receptor. MPPEH in surface and subsurface soil is therefore a potentially complete pathway. The Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017) selected appropriate land use restriction to include residential use and intrusive activity restrictions within SEAD 003-R-01.
- SEAD 007-R-01 LUCs Area: The SEAD 007-R-01 property was remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. Munitions responses removed 1,897 targets of which none were classified as MEC. 218 MPPEH items were detected related to the M73 Practice LAW Rocket and 40mm Practice Grenade. M73 Practice Rockets potentially contain small, smoke emitting, bursting charges. Although a munitions removal was performed at the SEAD 007-R-01 MRS, the potential exists that MPPEH may remain at and could pose hazards to a future receptor. MPPEH in surface and subsurface soil is therefore a potentially complete pathway. The Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017) selected appropriate land use restriction to include residential use and intrusive activity restrictions within SEAD 007-R-01.
- **SEAD 70:** The SEAD 70 property was remediated to conditions suitable for the planned future use. A risk assessment determined that available data for other hazardous substances, pollutants, and contaminants does not indicate a risk to any future receptors. Based on the

absence of a MEC hazard and no known source of residual concentrations, future unlimited use and unlimited exposures is warranted at this AOC and No Further Action was the Selected Remedy. All environmental soil and groundwater remediation activities on the property have been completed. See: Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017).

Airfield Road: The property includes no buildings and includes half of an existing roadway
and road shoulder. The property was previously used as a road for access to the SEDA
Airfield. The property is intended to be transferred for continued use as a roadway and is
consistent with the intended reuse of the property as set forth in the Seneca Army Depot Reuse
Plan and Implementation Strategy prepared for Seneca County.

Other conditions relevant to the Property include:

- Based on the age of the buildings (constructed prior to 1978), lead-based paint (LBP) is presumed to be present in all of the buildings covered by this FOST. The following buildings are presumed to contain LBP: Buildings 803, 804, 805, 813/814, 815, 816, 817, and 819.
- Radon surveys were conducted in the buildings on the property. In Building 803, radon sampling showed one sample at 12.1 pCi/l, which is above the EPA guidance of 4 pCi/l for air in habitable buildings. A shelf containing Radon paint was removed from the building and the radon reading was determined to not be of concern.
- There is evidence that material potential presenting an explosive hazard (MPPEH) may be present on the property. Results and conclusions of the munitions response removal actions indicate that there was evidence that MPPEH were previously present at SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01, and SEAD 007-R-01, and there remains a possibility that MPPEH may still remain. The remedy selected for the MRS was to impose, maintain, and monitor LUCs that prohibits the development or use of property for residential housing, elementary and secondary schools, childcare facilities or playgrounds at the real property within the Seneca AD MRSs.
- There is asbestos-containing material (ACM) in the following buildings: 817 and 819 and no remediation has occurred. The ACM includes: gasket material around furnace stack blower and flexible duct connections in Building 817 and air cell pipe, fitting insulation and flooring tiles in Building 819 (Galson & Galson, 1988). During a visual inspection in June 2018, ACM warning stickers were observed on the gaskets and duct connections within Building 817 and on the pipe insulation and flooring tiles within the east and west bays of Building 819. There was no evidence that previous surveys had investigated other rooms within Building 819, therefore additional asbestos sampling was conducted in generator and boiler rooms located in the northeast and northwest corners of the building. ACM was confirmed in both of these locations (**Appendix C**).

• The following buildings were used for radiological activities: Building 803 was utilized for mixed waste storage and Buildings 815 and 816 were used for special weapons maintenance. Weapons may have been removed from shipping containers for testing and or maintenance operations. The Army conducted a radiological site assessment and concluded there is no evidence of any release of radiological materials at buildings 815 and 816, See: Final Radiological Survey Report – SEAD 12 Phase I and II Surveys dated March 2003. There was evidence of a release of radiological material at Building 803; however, this source was removed therefore no unacceptable residual levels of radioactive material are present. See: Final Closure Report, The Former Mixed Waste Storage Facility, Building 803 (SEAD-72) dated July 2010.

Table ES-1 provides a Project Environmental Overview of conditions at the Property. This table provides a brief description of environmental conditions that were evaluated during the ECP Update process. Detailed information associated with this overview is provided in the remaining portion of the document in the designated section number identified.

In accordance with ASTM Designation D5746-98 (2010), Standard Classification of Environmental Condition of Property Area Types for Defense Base Closure and Realignment Facilities, it is recommended that the various parcels at the Property be classified as follows. These recommended classifications do not include categorizing the parcels based on de minimis conditions that generally do not present material risk of harm to the public or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Note that **Table ES-2** has been updated for the additional environmental activities undertaken since the original EBS.

				37. Confirmation testing shows that the VOCs contamination remained under the building 813. See the Final Supplemental Remedial Investigation Report, Radioactive Waste Burial Sites (SEAD-12), and October 2006 for more details. Between July and November of 2009, the Army excavated approximately 5,400 cubic yards of soil, debris, and fill from four excavations within the footprints of burial pits A, B, and C. Approximately 5,400 tons of waste and debris was transported to an off-site landfill for disposal as cover material with mixed debris, 122 tons of assorted scrap metals were recycled at a metal recycling facility, and 13.25 tons of military-related items were secured by the Army, demilitarization confirmed, and disposed of at an off-site permitted disposal facility. The Final ROD for SEAD 12 was issued March 2015 and the state indicated concurrence with LUCs. The conservation/recreational use of the site with LUCs in place (where necessary) will not pose an unacceptable risk to human health.
BRAC Parcel 57(3)PS/PR/HR	6 revised to 4	SEAD 12 (Building 803) Alias SEAD 72- Building 803	Mixed Waste Storage Building	SEAD 72 (Mixed Waste Storage Building 803) - This AOC is approximately 0.05 acres. This facility was permitted under interim status to store mixed waste. Between July and November of 2009, the Army implemented the Final Closure Plan for Former RCRA Unit Building 803 – Mixed Waste Storage Facility Solid Waste Management Unit – SEAD-72, dated October 2005. This facility was clean closed at this time. The Final ROD for SEAD 72 was issued March 2015 and the EPA indicated concurrence with no further action in a letter dated March 30, 2015. BRAC Parcel 57(3)PS/PR/HR was revised from ECP Category 6 to Category 4 due to the completion of remedial actions.

ECP Parcel Number	ECP Category	Building Number / Site Name	Description	Parcel Summary
BRAC Parcel 104(6) PR/HS/HR	6 revised to 4	SEAD 70 – Building T-2110	Filled Area	SEAD 70- Building T-2110 was a fill area that had been used to dispose of construction debris. An investigation of this site revealed that sediment in the surrounding wetland and the soils which comprise the landfill material had been impacted by moderate releases of polyaromatic hydrocarbons (PAHS) (in the sediment) and arsenic (in the soil). All environmental soil and groundwater remediation activities on the site have been completed. The Final ROD for SEAD 70 was issued March 2017 and the EPA and state indicated concurrence with the Army's No Action determination. BRAC Parcel 104(6) PR/HS/HR was revised from ECP Category 6 to Category 4 due to the completion of remedial actions.
BRAC Parcel 122Q;	6 revised to 4	SEAD 46	3.5-inch Rocket Range	SEAD 46 was used as a function test range for 3.5-inch rocket motors. Munitions Responses removed 2,054 targets of which none were classified as MEC, 16 items were classified as MPPEH but were determined to be MD after perforating, 585 items were munitions debris and 1,009 items were classified as cultural debris. The results of the soil analysis showed that heavy metals and SVOCs exists above background levels but were below the unrestricted levels. The Final ROD for SEAD 46 was issued March 2017 and the EPA and state indicated concurrence with LUCs. The conservation/recreational use of the site with LUCs in place will not pose an unacceptable risk to human health. SEAD 46 was revised from ECP Category 6 to Category 4 due to the completion of remedial actions.
BRAC Parcel 104(6)PR/HS/HR	6 revised to 4	SEAD 003-R-01 (SEAD 57)	Explosives Ordnance Disposal (EOD) Range 1	SEAD 003-R-01 was the former EOD Area used to performer ordnance and explosives disposal and training with conventional ammunition and explosives weighing less than 5 lbs. Munitions responses removed 7,485 targets of which 2 were classified as

ECP Parcel Number	ECP Category	Building Number / Site Name	Description	Parcel Summary
				MEC, 47 items were classified as MPPEH but all but the two MEC above were determined to be MD after perforating, 3,294 items were munitions debris and 4,623 items were classified as cultural debris. The results of the soil analysis showed that heavy metals and SVOCs exists above background levels but were below the unrestricted levels. The Final ROD for SEAD 003-R-01 (SEAD 57) was issued March 2017 and the EPA and state indicated concurrence with LUCs. The conservation/recreational use of the site with LUCs in place will not pose an unacceptable risk to human health. SEAD 003-R-01 was revised from ECP Category 6 to Category 4 due to the completion of remedial actions.
BRAC Parcel 122 Q and 96(6)HR(P)	6 revised to 4	SEAD 002-R-01	East Explosive Ordnance Disposal Ranges	SEAD 002-R-01 includes two separate areas, East EOD Range #2 (3 acres) and East EOD Range #3 (4 acres). Both areas were used for training of EOD units. In May – Nov 2006, a munitions response was performed at this former range. During this response, 313 items were recovered and dispositioned. No MEC was found, 2 MPPEH items were discovered and classified as MD following explosive venting. In total 8 items were determined to be munition debris and 256 were determined to be cultural debris. (See Munitions Response Report dated Mar 2007). The Final ROD for SEAD 002-R-01 was issued March 2017 and the EPA and state indicated concurrence with LUCs. The conservation/recreational use of the site with LUCs in place will not pose an unacceptable risk to human health. SEAD 002-R-01 was revised from ECP Category 6 to Category 4 due to the completion of remedial actions.
BRAC Parcel 127 Q	6 revised to 4	SEAD 007-R-01	Rifle Grenade Range	This 30-acre grenade range was used for training with 40mm grenade launchers and LAW. All training was accomplished with training rounds. In May – Nov 06, a munitions response was

ECP Parcel Number	ECP Category	Building Number / Site Name	Description	Parcel Summary
				performed at this former range. During this response, 1897 items were recovered and dispositioned. 218 MPPEH items were detected related to the M73 Practice LAW Rocket and 40mm Practice Grenade. M73 Practice Rockets potentially contain small, smoke emitting, bursting charges. When the munition is intact it can't be determined if it still contains the bursting charge, so all M73 Practice LAW rockets that could contain the charge were detonated to render them inert. In addition to the MPPEH items, 710 of these items were determined to be munition debris, and 969 were determined to be cultural debris. The Final ROD for SEAD 007-R-01 was issued March 2017 and the EPA and state indicated concurrence with LUCs. The conservation/ recreational use of the site with LUCs in place will not pose an unacceptable risk to human health. SEAD 007-R-01 was revised from ECP Category 6 to Category 4 due to the completion of remedial actions.
BRAC Parcel 96(6)HR(P) and 97(6)HR(P)		SEAD 13	Inhibited Red Fuming Nitric Acids Disposal Site	An ESI conducted at the SWMU indicates that impacts to the groundwater have occurred at this site. This SWMU was classified as a Moderate Priority AOC. Natural Attenuation of the Ground Water. Access and use of groundwater is prohibited until groundwater nitrate concentration is remediated down from 731mg/L to 10 mg/L or below. See "Final Decision Document-Mini Risk Assessment for SEAD 13, Inhibited Red Fuming Nitric Acid (IRFNA) disposal site dated July 2004 for additional information. This site is a CERCLA operable unit and not a munitions response site. The Final ROD for SEAD 13 concluded that conservation/ recreational use of the site with groundwater use restrictions in place will not pose an unacceptable risk to human health. SEAD 13 was revised from ECP Category 6 to Category 4 due to the completion of remedial actions.

1.0 INTRODUCTION

Parsons was authorized to prepare an Environmental Condition of Property Report Update for several retained parcels within the Conservation/Recreation Area, hereinafter referred to as the "Property". The property encompasses approximately 283 acres of land and are located within the Seneca Army Depot Activity in Romulus, New York. The property consists of six parcels where the Army has completed remedial investigation and remedial action. In support of the ECP Report Update, a visual reconnaissance was conducted in June 2018. The purpose of the visit was to perform a site reconnaissance and obtain information indicating the environmental condition of the Property and to determine any change in conditions from the original EBS prepared in March 1997, in preparation for the transfer of these six previously retained parcels located within the Conservation/Recreation Area to Seneca County Industrial Development Agency (SCIDA). Table 1-1 below shows a crosswalk of the six subject parcels using their current site names and the same areas as described in the original EBS.PURPOSE OF ENVIRONMENTAL CONDITION OF PROPERTY REPORT

The primary purposes of the ECP Report Update were to evaluate the environmental condition of the Property and to determine if conditions have changed from the original EBS or if new information was available to update the previous property category.

According to §4.6.1 of ASTM Designation D 6008-96 (2014) *Standard Practice for Conducting Environmental Baseline Surveys*, "users and environmental professionals may use information in prior Environmental Baseline Surveys (EBSs) provided such information was generated as a result of procedures that meet or exceed the requirements of this practice or accurately state the limitations of the information presented." The original EBS (March 1997) was found to meet the requirements set forth in §4.6.1 of ASTM D 6008-96 (2014) and the narrative discussion and findings of that report are incorporated by reference into this ECP Report Update as if contained here in its entirety.

1.2 SCOPE OF SERVICES

The ECP Report Update scope of services for the Property includes the following activities:

- Conduct a visual inspection of the Property and any buildings, structures, or other improvements on the Property and a physical inspection of adjacent properties to determine the current conditions.
- Detailed review of the prior EBS (U.S. Army BRAC Environmental Baseline Survey dated March 12, 1997, as revised on December 3, 1997)) and the Finding of Suitability to Transfer (September 2003, updated July 2018).
- Review of reasonably available standard Federal, state and local government records pertaining to the Property, including available maps.
- Identification of sources of contamination on the Property and on adjacent properties which could migrate to the Property during Army ownership.

• Identification of ongoing response action or actions that have been taken at or adjacent to the Property.

This ECP Report Update adheres to Army Regulation 200-1 (December 13, 2007), DoD 4165.77-M (March 1, 2006) and follows ASTM Designation D 6008-96 (2014), *Standard Practice for Conducting Environmental Baseline Surveys* as a guideline when not inconsistent with Army

regulations and other applicable Army guidance.

This ECP Report Update covers six of the previously retained parcels within the Conservation/Recreation Area, approximately 283 acres of the Seneca Army Depot Activity located in Romulus, New York. This ECP Report Update recommends re-classification of various parts of the Property into one of seven DoD Environmental ECP categories as defined by the ASTM Designation D 5746-98 (2002), Standard Classification of Environmental Condition of Property Area Types for Defense Base Closure and Realignment Facilities.

SEAD 12

SEAD 12 was initially classified as ECP Category Type 6 due to the release, disposal or migration of hazardous substances. Activities at Buildings 813-817 included paints, boiler pits, petroleum release, tritium release, and unknown burial activities. There was radioactive waste burial north of Buildings 804 and 805 (SEAD 12B) and mixed waste storage at Building 803 (SEAD 72). There were five remediation sites located on the property. A summary of the environmental remediation sites on the property is as follows: SEAD 12A, SEAD 12B, SEAD 12C (Buildings 813/814, 815, 816, 817), SEAD 12 – Building 819, and SEAD 12 – Building 803 (alias SEAD 72-Building 803). SEAD 12A and B are north of Buildings 815 and 816. Radioactive waste was buried here and removed in 1986. Additional removal actions removed debris and some radioactive materials (naturally occurring radioactive materials [NORM], radium dials, paint).

The Army and EPA have concluded that the majority of land within SEAD-12 is suitable for unrestricted use and unlimited exposures with no further action required, with the exception of groundwater and soil within a small portion of SEAD-12. Land that underlies two unoccupied buildings (Buildings 813 and 814) and that is in the vicinity of former monitoring well MW12-37, is contaminated with volatile organic compounds (VOCs), primarily trichloroethene (TCE) at levels exceeding federal and state groundwater drinking water standards and state soil cleanup objective (SCO) levels. Based upon the soil data collected at the buildings' edges during the interim removal action, it is likely that VOCs beneath the buildings remain at sufficient concentrations to pose a potential risk to future users or occupants of the land via vapor intrusion. The response action selected in this ROD is necessary to protect human health and the environment from actual or threatened releases of hazardous substances into the (indoor air) environment from the AOC, or from actual or threatened releases of pollutants or contaminants, which may present an imminent and substantial endangerment to public health or welfare.

In response to this future-use concern, the selected remedy for this portion of SEAD-12 addresses contaminated soil and groundwater, and includes:

 Subject to the limitations set forth in the following paragraph, the implementation, monitoring, and maintenance of an environmental land use control (LUC) restricting access to and use of the existing vacant Buildings 813/814 and the construction of inhabitable structures (temporary or permanent) above the area and within a fifty foot perimeter of Buildings 813/814 and fifty foot radius from MW12-37 where TCE-contaminated soil was previously identified, and where contaminated groundwater may exist; and

• the implementation, monitoring, and maintenance of a LUC that prohibits access to and use of groundwater in the vicinity of Buildings 813/814.

The Army has finalized a LUC Remedial Design, which specifies that these LUCs will be implemented through the recording of an Environmental Easement against the property at the time of property transfer. Based on these conclusions, SEAD 12 has been reclassified as ECP Category Type 4 due to the completion of remedial activities.

SEAD 46, SEAD 13, and SEAD 002-R-01

This area encompasses SEAD 002-R-01, SEAD 46 and SEAD 13 (not a former MRS, but enveloped by SEAD 46/SEAD 002-R-01 property boundary), and was initially classified as ECP Category Type 6 due to the abandoned IRFNA Disposal Site (SEAD 13). An ESI conducted at SEAD 13 by Engineering Science, Inc. indicates that impacts to the groundwater have occurred at this site. The remedy selected for SEAD 13 was no further action (NFA) with a groundwater use/access restriction. Risk management assessments conducted on the two MRSs located on the property indicate that carcinogenic risks and non-carcinogenic hazards resulting are manageable, and thus based on review of the MC risk, these properties are suitable for unrestricted use and unlimited exposures. However, results and conclusions of the munitions response removal action conducted at the MRSs indicates that there was evidence that MEC was previously present at the MRSs, and there remains a possibility that MEC may still remain. During the munitions response investigations and removal actions performed, state-of-the-art investigation and removal techniques were implemented, completed, and documented to identify and mitigate residual quantities of munitions and ordnance that may remain at the sites, but in spite of these efforts, there is a continuing potential that undetected MEC may remain, and if they do, there is a potential that future receptors could be affected or harmed. The remedy for these MRSs is to impose, maintain, and monitor a LUC that prohibits the development or use of property for residential housing, elementary and secondary schools, childcare facilities or playgrounds at the real property within SEAD 46 and SEAD 002-R-01. The Army has finalized a LUC Remedial Design, which specifies that these LUCs will be implemented through the recording of an Environmental Easement against the property at the time of property transfer. SEAD 13, SEAD 46, and SEAD 002-R-01 have been reclassified as ECP Category Type 4 due to the completion of remedial activities.

SEAD 003-R-01 (SEAD 57)

SEAD 003-R-01 was initially classified as ECP Category Type 6. This area consisted of an explosive ordnance disposal area and was used from 1941 to 1994. An ESI conducted at this SWMU by Engineering Science, Inc. indicated that impacts to the soils and groundwater from heavy metals have occurred at this site. There was one remediation site located on this parcel which included only the SEAD 003-R-01 MRS alias SEAD-57, the former Explosive Ordnance

Disposal Area (EOD-1). Risk management assessments conducted based on further review and consideration of these factors indicate that carcinogenic risks and non-carcinogenic hazards resulting are manageable, and thus based on review of the MC risk, the property is suitable for unrestricted use and unlimited exposures. However, results and conclusions of the munitions response removal action conducted at the MRS indicates that there was evidence that MEC was previously present at the MRS, and there remains a possibility that MEC may still remain. During the munitions response investigations and removal actions performed, state-of-the-art investigation and removal techniques were implemented, completed, and documented to identify and mitigate residual quantities of munitions and ordnance that may remain at the sites, but in spite of these efforts, there is a continuing potential that undetected MEC may remain, and if they do, there is a potential that future receptors could be affected or harmed. The remedy for this MRS is to impose, maintain, and monitor a LUC that prohibits the development or use of property for residential housing, elementary and secondary schools, childcare facilities or playgrounds at the real property within the SEAD 003-R-01 MRS. The Army has finalized a LUC Remedial Design, which specifies that these LUCs will be implemented through the recording of an Environmental Easement against the property at the time of property transfer. SEAD 003-R-01 has been reclassified as ECP Category Type 4 due to the completion of remedial activities.

SEAD 007-R-01

This parcel includes the grenade range and was initially classified as ECP Category Type 6. There was one remediation site located on this parcel which included only the SEAD 007-R-01 MRS (alias Grenade Range, EOD-1). Risk management assessments conducted based on further review and consideration of these factors indicate that carcinogenic risks and non-carcinogenic hazards resulting are manageable, and thus based on review of the MC risk, the property is suitable for unrestricted use and unlimited exposures. However, results and conclusions of the munitions response removal action conducted at the MRS indicates that there was evidence that MEC was previously present at the MRS, and there remains a possibility that MEC may still remain. During the munitions response investigations and removal actions performed, state-of-the-art investigation and removal techniques were implemented, completed, and documented to identify and mitigate residual quantities of munitions and ordnance that may remain at the sites, but in spite of these efforts, there is a continuing potential that undetected MEC may remain, and if they do, there is a potential that future receptors could be affected or harmed. The remedy for this MRS is to impose, maintain, and monitor a LUC that prohibits the development or use of property for residential housing, elementary and secondary schools, childcare facilities or playgrounds at the real property within the SEAD 007-R-01 MRS. The Army has finalized a LUC Remedial Design, which specifies that these LUCs will be implemented through the recording of an Environmental Easement against the property at the time of property transfer. SEAD 007-R-01 have been reclassified as ECP Category Type 4 due to the completion of remedial activities.

SEAD 70

This parcel consists of the fill area adjacent to Building T-2110 and was initially classified as ECP Category Type 6. There was one remediation site located on this parcel which included only the SEAD – 70 Filled Area of Concern (AOC). This area was not included in the previous transfer. Building T-2110 was identified as a potential ordnance, ammunition, explosives and other warfare materials storage shed at the time of the 1998 Archives Search Report effort, but once site inspections and interviews were completed this area was dismissed from further consideration for munitions response action. Building T-2110 was demolished prior to 2006 but after the 1998 ASR. The building was adjacent to SEAD 70, but not associated with the SEAD 70 fill area. An interim soil removal action followed by a focused confirmatory environmental sampling and analysis program was conducted at SEAD-70 to eliminate hazardous substances, pollutants and contaminants identified during an earlier Expanded Site Investigation (ESI) and risk assessment characterization of the AOC. There are no land use restrictions for SEAD 70. All environmental soil and groundwater remediation activities at this site have been completed. The parcel is reclassified as ECP Category Type 4.

AIRFIELD ACCESS ROAD

This piece of property consists of 0.505 acres, which includes no buildings and includes half of an existing roadway and road shoulder. There was determined to be no hazardous conditions recognized on the property that would present an unacceptable risk to human health and the environment. There are no environmental investigation/remediation sites and no evidence of groundwater contamination on this property. This parcel is classified as ECP Category Type 1.

As defined in ASTM D5746 – 98 (Reapproved 2016) Standard Classification of Environmental Condition of Property Area Types for Defense Base Closure and Realignment Facilities, and consistent with CERFA, the property classification categories are as follows:

- <u>ECP Area Type 1</u>: An area or parcel of real property where no release, or disposal of hazardous substances or petroleum products or their derivatives has occurred (including no migration of these substances from adjacent properties).
- <u>ECP Area Type 2</u>: An area or parcel of real property where only the release or disposal of petroleum products or their derivatives has occurred.
- <u>ECP Area Type 3</u>: An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred, but at concentrations that do not require a removal or remedial action.
- <u>ECP Area Type 4</u>: An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred, and all remedial actions necessary to protect human health and the environment have been taken.

- <u>ECP Area Type 5</u>: An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred and removal or remedial actions, or both, are under way, but all required actions have not yet been taken.
- <u>ECP Area Type 6</u>: An area or parcel of real property where release, disposal, or migration, or some combination thereof, of hazardous substances has occurred, but required response actions have not yet been initiated.
- <u>ECP Area Type 7</u>: An area or parcel of real property that is unevaluated or requires additional evaluation.

1.3 ASSUMPTIONS AND LIMITATIONS

The information obtained from individuals interviewed and prior environmental reports was considered to be accurate unless reasonable inquiries indicated otherwise. Conditions observed were considered representative of similar areas that were not accessible unless otherwise indicated. This ECP Report Update presents a summary of reasonably ascertainable information on the environmental conditions of, and concerns relative to, the land, facilities and real property assets at the Property. Its findings are based on a thorough review of reasonably ascertainable documents, a visual reconnaissance of the Property in June 2018 and interviews with personnel knowledgeable about the Property and its history. Existing environmental investigations and reports and historical documents were reviewed in support of this ECP Report Update. Information obtained from these other sources is reflected within this report by reference.

The Property buildings and structures were visually inspected during the site reconnaissance. However, a 100% visual reconnaissance of every single interior space within each building was not practical. Except for limited sampling of potential asbestos material in Building 819, no sampling or analysis of any media was conducted during this survey (**Appendix C**).

2.0 PROPERTY DESCRIPTION

2.1 **PROPERTY LOCATION**

The Seneca Army Depot Activity (SEDA) is located near Romulus, Seneca County, New York, approximately 40 miles south of Lake Ontario. Formerly 10,587-acres, the majority of the former SEDA has already been transferred (approximately 9,250 acres) to third party reusers. The site is at an elevation of approximately 600 feet above mean sea level (MSL) in an uplands area forming a divide between Cayuga Lake to the east and Seneca Lake to the west, two of the New York Finger Lakes. Most of the surrounding area is characterized by sparsely populated farmlands. Adjacent to the facility on the east is New York State Highway 96 and on the west is New York State Highway 96A. A map of the installation is presented in **Figure 1**.

The areas of SEDA addressed in this ECP Report Update are the six previously retained parcels located within the Conservation/Recreation Area. The Conservation/Recreation area consists of the majority of the SEDA north of West Romulus Road. The property to be transferred consists of approximately 283 acres and includes 5 ECP parcels. The ECP parcels for the Property are shown on **Figure 1**.

SEAD 46, SEAD 13, and SEAD 002-R-01

SEAD-46 (Small Arms Range), also known as the "3.5-inch Rocket Range", is a trapezoidal-shaped parcel of land that encompasses approximately 68 acres (**Figure 1**). The AOCs southern boundary is located approximately 6,000 feet north-northwest of the former Depot's main gate off of State Highway 96. The area is primarily open grassland that is occasionally interrupted and bordered by areas of dense brush and trees. SEAD-46 is bisected by an unnamed dirt road that runs southeast to northwest. The predominant feature in the area is a man-made earthen berm that is situated near the northwest corner of the AOC; the berm served as a protective barrier during range operations.

SEAD 002-R-01 is encompassed by SEAD 46 and includes two separate areas, EOD-2 and EOD-3, which are located in the northeastern portion of the former Depot in the vicinity of the Depot's Duck Pond and SEAD-46 (**Figure 1**).

EOD-2 encompasses approximately 3 acres of land on the southwestern shore of the Duck Pond. This area is west-northwest of SEAD-46 and southeast of the intersection of Fayette Road and East-West Baseline Road. EOD-2 is comprised primarily of open grassland with small areas of brush and tree cover. A portion of the eastern boundary of this site is defined by the shore of the Duck Pond. A portion of EOD-2 is collocated with the western portion of SEAD-13, the former Inhibited Red-fuming Nitric Acid disposal area. The 1998 ASR states that explosive devices were used in EOD-2, and that non-explosive projectiles were disposed near the Duck Pond.

EOD-3 encompasses approximately 4 acres of land approximately 250 feet north of the earthen protective barrier berm in SEAD-46. EOD-3 is mostly flat with the exception of a 100 foot by

200-foot depression in the middle of the site. The area surrounding the depression is wooded. The ASR describes the AOC as a former EOD disposal area and indicates that in the 1950s and 1960s the area surrounding the depression was clear of brush and trees.

The Inhibited Red Fuming Nitric Acid (IRFNA) disposal site, which is encompassed by SEAD 46, is located in the northeastern portion of SEDA (**Figure 1**). The site includes two IRFNA disposal areas, SEAD-13-East and SEAD-13-West, located on the eastern and western sides of the south end of the Duck Pond, respectively, near the entrance of its source tributary (**Figure 1**). The ground surface for both areas is less than two feet higher than the water level of the Duck Pond. SEAD-13-East is bound by mostly deciduous trees and East-West Baseline Road to the north, by deciduous trees and grassland to the east and south and by the Duck Pond to the west. SEAD-13-West is bound by grassland and low brush to the north, west and south and by the Duck Pond to the east. The extension of East-West Baseline Road is located approximately 100 feet north of the western area.

SEAD-13-East is comprised of six elongated disposal pits (possibly seven) that are visible on the ground surface immediately south of a dirt access road off of East-West Baseline Road. The pits, which are each generally 20 to 30 feet long, oriented east to west, are marked by sparse vegetation, crushed shale and 1-inch limestone pieces at the surface. Vertical water and shower pipes are located west of the pits.

SEAD-13-West, which is located at the end of a dirt road off of East-West Baseline road, is comprised of a broad, low plain which extends to the shoreline of the Duck Pond. The area has no visible evidence of former IRFNA disposal pits at the surface, however, there is an area that is characterized by sparse vegetation and some crushed shale. The surface does not resemble the visible pits observed in SEAD-13-East. A vertical shower pipe and head is located in the eastern portion of this area, approximately 50 feet from the Duck Pond.

SEAD 003-R-01

SEAD 003-R-01 (SEAD-57, the former Explosive Ordnance Disposal Area [alias EOD-1]), is a rectangular parcel of land that encompasses approximately 72 acres in the west-northwest portion of the former Depot (**Figure 1**). SEAD 003-R-01 is adjacent to the southernmost portion of the Open Burning/Open Detonation (OB/OD) Grounds that occupy most of the land in the northwestern corner of the former Depot. The land type within SEAD 003-R-01 is primarily open grassland. A few man-made structures are located in the center of the AOC and along the northern edge of the AOC. An open, reverse "C-shaped berm, externally measuring approximately 80 feet by 100 feet, is located in the center of the AOC. Equipment shelters, remote control shelters, and an EOD storage structure are located along the north-central edge of the AOC. An east-west oriented, unnamed dirt road transects the northern edge of the AOC, and a second, perpendicular, unnamed dirt road intersects the northern road roughly halfway across the AOC's edge. This road provides vehicular access to the area of, and surrounding, the earthen containment berm.

SEAD-12

SEAD-12 is located in the northern portion of SEDA within the former high security area. Investigation of SEAD-12 originally began as the investigation of two separate areas, formerly designated as SEAD-12A (Radioactive Waste Burial Site – northeast corner of the high security area) and SEAD-12B (Radioactive Waste Burial Site – northeast of Buildings 803, 804, and 805). SEAD-12A encompassed an area of approximately 1,000 feet long by 1,000 feet wide north of Buildings 815/816 that is suspected to have included up to five separate small burial pits. SEAD-12B, is smaller, encompassing an area measuring 300 feet long by 300 feet wide and is suspected to have included a 5,000-gallon storage tank and a small dry waste pit. Locations of these two historic SEADs are shown on **Figure 1**.

After the completion of an expanded site inspection (ESI) of SEAD- 12A and SEAD-12B in 1995. To determine if any additional disposal activities occurred in the high security area, the investigation was expanded throughout the high security area. Additional burial areas were found northeast of buildings 815 and 816. These were addressed with the SEAD 12 removal actions. Building 715 and the portion of Reeder Creek that is adjacent to SEAD-12 were also included in the RI at SEAD-12. Building 715 is a wastewater treatment plant that received wastewater from the buildings within the high security area during the period of their Army use. Reeder Creek receives the surface water runoff from SEAD-12, and other locations within the former Depot, as well as the wastewater discharge from Building 715.

SEAD-12 excludes the area of SEAD-63, the Miscellaneous Components Burial Site, which is also located within the high security area along its western boundary. A non-time critical removal action (NTCRA) was performed at SEAD-63 in 2004, resulting in the removal of 5,100 tons of soil and debris. A ROD for SEAD-63 was signed by the Army and the EPA, with concurrence from the NYSDEC, in September 2006 selecting no further action for that AOC.

SEAD-72, the former Mixed Waste Storage Facility (Building 803) is located in the northern portion of SEAD-12, between Service Road No. 1 and the high security area's outer perimeter security fence line near (west of) the intersection of Service Road No. 1 and Patrol Road. The Army designated Building 803 to store mixed chemical and radiological waste generated at SEAD prior to off-site shipment and subsequent disposal.

SEAD 70

SEAD-70 is a historic fill area encompassing approximately 4.5 acres of land that are adjacent to the former Building T-2110 in the northwestern portion of the Depot (**Figure 1**). SEAD-70 is located south of East-West Baseline Road approximately 1,000 feet west of its intersection with North-South Baseline Road, and approximately 15,000 feet northwest of the former Depot's main gate off of State Highway 96. Prior to 2006, Building T-2110 was located at this AOC, but it was demolished due to safety concerns about the aged, dilapidated structure. Building T-2110 was identified as a potential ordnance, ammunition, explosives and other warfare materials storage shed at the time of the 1998 Archives Search Report effort, but once site inspections and

interviews were completed, this area was dismissed from further consideration for munitions response action. Building T-2110 was demolished and transferred and did not become an area of concern in the FFA.

The most noticeable feature in the undeveloped portion of the AOC is a kidney-shaped landfill that forms a flat topographic high area. The landfill appears to originate near the former Building T-2110 and expand southeasterly. A mound is located near the southeastern corner of the former building and an elongated vegetated mound is present along the southern perimeter of the landfill. Immediately east of the landfill is a wet area beyond which is a large stand of deciduous trees.

The topography over the extent of the landfill is relatively flat; however, the local and regional topography surrounding the landfill slopes west.

SEAD 007-R-01

The Grenade Range, which was constructed in the mid-1980s, encompasses approximately 28 acres of land in the northwestern portion of the former Depot, to the west and southwest of SEAD 003-R-01 (**Figure 1**). During its lifetime, the Grenade Range area contained wooden and armored vehicle targets, distance and boundary markers, and a range control tower. The Grenade Range is comprised primarily of open grassland that is surrounded by woods. The 1998 ASR states that 40mm M781 (40mm Low Velocity Practice Cartridge) and 35mm M73 sub-caliber practice rockets were used at the Grenade Range during security forces' training. There is no record (or indication at the targets) that high explosive (HE) rounds were used. Small arms (blanks) casings were reported to be present at the time of the ASR.

AIRFIELD ACCESS ROAD

The property consists of 0.505 acres, which includes no buildings and includes half of an existing roadway and road shoulder. It is located in the southwestern corner of the Airfield area and includes the Town of Romulus Roadway, formerly known as "Sutton Road." (**Figure 1**)

2.2 PREVIOUS ECP AREA TYPE CATEGORIZATION

In accordance with ASTM Designation D 5746-98 (2016), *Standard Classification of Environmental Condition of Property Area Types for Defense Base Closure and Realignment Facilities*, the original EBS provided the baseline property categorizations and is attached herein as **Appendix A**.

2.3 PHYSICAL DESCRIPTION

2.3.1 SITE AND VICINITY CHARACTERISTICS

The Conservation/Recreation Area is, in general, level with very little topographic relief. Short, steep slopes exist along streams (e.g., Reeder Creek) and drainage areas. Elevations range from approximately 600 ft above mean sea level (MSL) to 700 ft MSL. The highest elevations are in the southeast corner of the Conservation/Recreation Area and the lowest elevations are in the west and northwest. Numerous former munitions igloos are located throughout the southern portion of the

Conservation/Recreation Area. These were all inspected and closed by previous studies. Nine buildings, located in the northern portion of the Conservation/Recreation Area, are included in the six ECP parcels.

The SEDA is located in a rural area and is, in general, surrounded by small farms and agricultural areas. Some light industry (Data Storage Facility) is located within the northern portion of the Conservation/Recreation Area. The small town of Romulus abuts the eastern boundary and includes residential and commercial buildings.

2.3.2 CLIMATOLOGY

The area around the Seneca Army Depot Activity is characterized as cool, with an average January temperature of 23°F and a July average temperature of 69°F. During the summer, and parts of the spring and fall, wide temperature differences between daytime highs and nighttime lows occur. Precipitation is fairly evenly distributed throughout the year, averaging about three inches a month. Nearby water bodies (Seneca Lake, Cayuga Lake, and Lake Ontario) cause a significant amount of winter precipitation, but also helps to moderate the local climate. Annual snowfall averages about 60 inches. Wind directions are most commonly westerly and west-southwesterly. Although wind velocities are generally moderate, there are many days during winter months when winds are sufficient to cause blowing and drifting snow (Engineering Science 1994c).

2.3.3 GEOLOGY, HYDROGEOLOGY, AND SOIL

Geology, hydrogeology, and soil information is presented in the original EBS and those descriptions remain representative.

2.3.4 OTHER FACILITIES AND SITE FEATURES

Other facilities and site features are presented in the original EBS and those descriptions remain representative.

2.3.4.1 BULK STORAGE TANKS

There were 11 USTs and 1 AST registered with the state of New York present on the Property. A complete listing of these tanks, including their capacities, year installed, and status, is provided in Table 2-1.

2.3.4.1.1 UNDERGROUND STORAGE TANKS

There was one non-petroleum UST identified on the Property during the original EBS. The UST was located in Building 804 and was used for wastewater storage. The wastewater was generated during the washing of radioactive-contaminated clothing. There was no evidence of known releases and the UST was filled and closed in place. Table 2-1 includes a summary of the former UST. There are currently no non-petroleum USTs on the Property.

2.3.4.1.2 ABOVEGROUND STORAGE TANKS

There were no non-petroleum ASTs identified on the Property during the original EBS. There are currently no non-petroleum ASTs on the Property.

2.3.4.2 SITE WASTE AND WASTEWATER

Site waste and wastewater operations are discussed in the original EBS. There are no changes to those descriptions. Any active facilities on previously transfer properties are supplied by a municipal water supply. There are a limited number of tenants using the facilities at the installation. Site wastewater is currently collected and discharged to the local publicly-owned treatment works.

2.3.4.3 STAINED SOIL, STAINED PAVEMENT OR STRESSED VEGETATION

No stained or discolored soil or distressed vegetation was observed during the site reconnaissance.

2.3.4.4 LIQUID DISCHARGES

No visible evidence of liquid discharges suspected to represent an environmental concern was observed during the site reconnaissance.

TABLE 2-1 NOTIFICATION OF PETROLEUM PRODUCT STORAGE, RELEASE, OR DISPOSAL

Building Number	Name of Petroleum	Date of Storage, Release, or Disposal	Remedial Actions				
Product(s) Removed/Closed in Place USTs and ASTs							
SEAD 12; Building 804	N/A	5,000-gallon concrete UST operated from approx. 1957 to 1962.	No known releases. Sampling results were negative. The UST was closed and filled in place.				
SEAD 12; Building 805	#2 Fuel oil	1,000-gallon UST operated from 1956 to 1997	No known releases. The UST was removed on 04.04/1997 and was not replaced.				
SEAD 12C; Building 813	#2 Fuel oil	2,000-gallon UST operated from 1957 to 1990	No known releases. In 1990 UST was removed and replaced with a 2,500-gallon UST (subsequently removed in 2004).				
	#2 Fuel oil	2,500-gallon UST operated from 1990 to 1996	No known releases. UST was removed and not replaced 8/24/2004.				
SEAD 12C; Building 814	#2 Fuel oil	500-gallon UST operated from 1957 to 1990	No known releases. In 1990 UST was removed and not replaced. Fuel oil was then supplied by the 2,500-gallon UST located at building 813.				
SEAD 12C; Building 815	#2 Fuel oil	3,000-gallon UST operated from 1957 to 1994	In 1994 UST was removed and not replaced. At the time of removal fuel oil was spilled into the excavation. Contaminated soil was removed. Tank removal was approved and closed out by NYSDEC on 12/2/1994. No further remediation is required.				
SEAD 12C; Building 816	#2 Fuel oil	3,000-gallon UST operated from 1983 to 1994	In 1998 UST was removed and not replaced. At the time of removal contaminated soil was discovered. NYSDEC spill #9712296. Spill was closed out on 2/11/1998. No further remediation is required.				
SEAD 12C; Building 817	#2 Fuel oil	1,000-gallon UST operated from 1959 to 1994	No known releases. UST was removed and not replaced in 4/3/1997.				

Building Number	Name of Petroleum Product(s)	Date of Storage, Release, or Disposal	Remedial Actions
SEAD 12- Building 819	#2 Fuel oil	3,000-gallon UST operated from 1957 to 1996	No known releases. In 1996 UST was removed and replaced with a 1,000-gallon AST (subsequently removed in 1997).
	#2 Fuel oil	1,000-gallon AST operated from 1996 to 1997	No known releases. AST was removed and not replaced 1/1/1997.
	diesel	10,000-gallon UST operated from 1981 to 1997.	No known releases. UST was removed and not replaced 8/1/1997.

2.3.4.5 POOLS OF LIQUID

No visible evidence of significant standing water or pools containing liquids likely to be hazardous substances or petroleum products were observed during the site reconnaissance.

2.3.4.6 PITS, PONDS OR LAGOONS

A small (80' x 60'), shallow pond is located within the SEAD 70 parcel. This area was previously excavated in December 2007 and is collecting surface water. As noted in the EBS, the Duck Ponds are located north of SEAD 002-R-01. No evidence of any pits, ponds or lagoons was observed at the other locations during the site reconnaissance.

2.3.4.7 WELLS

There are approximately 13 monitoring wells located on the Property. These wells were used for monitoring of environmental remediation sites located on the Property. Six of the wells are located within SEAD 46 and the remaining seven are located within SEAD 003-R-01

2.3.4.8 ON-SITE FILL

Based on our observations, it does not appear that a significant amount of fill has been imported onto the Property.

2.3.4.9 POLYCHLORINATED BIPHENYLS

Information regarding polychlorinated biphenyls is presented in the original EBS and those descriptions remain representative.

2.3.4.10 RADIOLOGICAL MATERIALS

Information regarding radiological materials is presented in the original EBS and those descriptions remain representative. Information specific to the parcels of interest is described below.

The following buildings were used for radiological activities:

- Building 804 was used for radiological instrument calibration and was used to store
 calibration standards containing minute amounts of radioactive materials. Radiological
 survey results indicate that there were no releases that are harmful to human health or the
 environment. See Final Radiological Survey Report SEAD 12 Phase I and II Surveys dated
 March 2003.
- Building 815 and 816 were used for special weapons maintenance. Radiological survey results indicate that there were no releases that are harmful to human health or the environment. See Final Radiological Survey Repot – SEAD 12 Phase I and II Surveys dated March 2003.
- Building 803 was used to store mixed wastes that are mainly wipes contaminated with several low-level radioactive components and F-listed solvents (SEAD-72). The materials were segregated by solvent type, double bagged, and stored in open top 55-gallon drums. The drums were stored in vaults with a maximum capacity of 24 drums per vault and 96 drums total for the building (Seneca Army Depot Activity 1991).

2.3.5 SITE HYDROLOGY

Eight drainages draw the surface water from the Seneca Army Depot Activity in two general directions. Ditches and streams carry the surface water from the southern portion of the installation into Indian and Silver Creeks, which flow into Seneca Lake just south of the airfield. Kendaia Creek, which flows into Seneca Lake near the Lake Housing Areas, drains the administration and central areas of the depot. Reeder Creek, which also flows into Seneca Lake, drains the northwestern and north-central portions (SEAD 007-R-01; SEAD 003-R-01; SEAD 70) of the Seneca Army Depot Activity. Surface water in the northern (SEAD 12) and eastern properties (SEAD 002-R-01) to be transferred tends to flow north via overland flow or drainage ditches into Duck Pond. Duck Pond is a large marshy area in the northeast portion of the SEDA which drains north into Kendig Creek. Kendig Creek flows north and discharges into Cayuga-Seneca Canal.

2.4 PROPERTY UTILITIES

The property was served by the following utilities: water, sanitary sewer, and electric. Descriptions of the Seneca Army Depot utilities are provided in the original EBS.

2.5 WATER SUPPLY WELLS, DRY WELLS AND SEPTIC SYSTEMS

No water supply wells or septic systems were identified on the Property in the original EBS.

2.6 FLOODPLAINS

A review of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map of Seneca County, New York indicates that the Property is located within areas outside the 500-year flood zone.

2.7 WETLANDS

Wetland information is presented in the original ECP and those descriptions remain representative.

2.8 COASTAL ZONE

The Property is not located near a coastal zone.

2.9 BIOLOGICAL RESOURCES

Biological resources are discussed in the original EBS. There have been no changes to the Property since that time that would affect the description of biological resources.

2.10 CULTURAL AND HISTORIC RESOURCES

Cultural and historic resources are discussed in the original EBS. There have been no changes to the Property since that time that would affect the description of these resources.

3.0 PROPERTY HISTORY

3.1 HISTORY OF OWNERSHIP

The history of ownership for the Seneca Army Depot Activity is presented in the original EBS.

3.2 PAST USES AND OPERATIONS

The past uses and operations that took place at the Seneca Army Depot Activity are presented in the original EBS. Information specific to the parcels of interest are described below.

SEAD 46

From the 1940s to the 1960s, SEAD-46 was used as a function test range for 3.5-inch rocket motors. The 1998 Archives Search Report (USACE, 1998) indicates that the earthen berm is visible in a 1954 aerial photograph of the area. The OE EE/CA indicates that SEAD-46 was once used as a testing range for rocket motors. Review of historic files revealed at least one picture of a 3.5-inch motor fixed to a tripod in front of the berm at SEAD-46. Currently, the site is not active, but it is occasionally used for training troops; blank ammunition is used during training practices.

The IRFNA Disposal Site (SEAD-13), which is encompassed by SEAD 46, was active during the early 1960s to dispose of quantities of unserviceable IRFNA. The disposal areas at SEAD-13 involved shallow trenches partially filled with limestone or slaked lime. The SEAD-13 site consisted of six pits, which were 30 feet long, 8 feet wide and 4 feet deep, and they were suspected to be located in two separate areas, SEAD-13-East and SEAD-13-West. The pits were excavated to the native shale at a depth of approximately 4 feet below ground. Following excavation, limestone was placed in the bottom of the pits to a depth of approximately 2.5 feet below ground. The sides of the pits were also lined with limestone. Barrels of unserviceable IRFNA were stored on pallets near the west end of each of the pits. A stainless-steel ejector, operated by water pressure, was fitted into a barrel with water flowing through the ejector. The ejector discharged a mixture of water and IRFNA through a long polyethylene hose under the water surface in the pit being used. During this period, the IRFNA was allowed to mix with the limestone in the pit to facilitate the neutralization of the acid. Five minutes were required to empty a barrel. Ten barrels were usually discharged into a single pit during a day's operation. At present, the site has been abandoned.

SEAD 003-R-01

For more than 20 years, the 143rd Ordnance Detachment, a Department of the Army tenant organization at the Depot, performed ordnance and explosives (OE) disposal and training at SEAD 003-R-01. The disposal area was used by Army EOD personnel for the disposal of conventional ammunition or explosives weighing less than 5 pounds that were recovered on an emergency basis. In 1989, the EOD disposal actions were moved to the OD Grounds due to RCRA regulations. The site was active from 1941 to 1993. Because of the nature of EOD work, open detonations at the site were performed irregularly.

SEAD 12

The northern portion of SEAD-12 was used for disposal of laboratory and maintenance wastes and demilitarized military components. The northeastern portion of SEAD-12 includes Buildings 802, 803, 804, 805, 806, 807, 810, 812, and 825 which were part of the WSA facility at SEDA. The eastern, western, and southern portions of SEAD-12 are primarily open fields and include Buildings 813 through 817, 819, and 823. These buildings were also part of the former WSA facility at SEDA. The redefined expanse of SEAD-12 is located within the high security area where the future land use is designated as recreational/conservation; however, the local reuse authority has long-term leased this area for electronic data storage (**Figure 1**).

During its use, Building 803 met the requirements for a mixed waste storage facility as defined in Title 6 New York Codes, Rules, and Regulations (6 NYCRR) Part 373. This facility was designated as a RCRA unit in SEAD's New York State Part 373 Hazardous Waste Management Facility RCRA Permit Application and was a unit that remained regulated under RCRA interim status provisions (Facility Number NY0213820830) pending final decontamination, verification sampling and analysis, and closure. The building is two stories tall, with the upper level measuring approximately 35 feet by 25 feet in size. Mixed wastes were stored within the storage vaults in new, removable head type, 5 5-gallon drums that conformed to appropriate Department of Transportation (DOT) specifications for containers holding hazardous waste during transport. The mixed waste consisted of radiological and solvent-wetted paper wipes (solvents that may have been used included isopropanol, Freon®, TCE, acetone, and toluene) that were used to clean low-level radioactive components. The wipes were segregated by solvent type, bagged, sealed with tape, double bagged, sealed with tape again, labeled for identification, and then placed in a drum. The drums would be stored in one of four vaults constructed inside Building 803 until they were shipped offsite under manifest. At any one time, Building 803 could hold up to 96 drums (24 per cell), if the drums were double stacked in each vault. Building 803 was cleared of drummed hazardous waste in 1996 and was left empty. The building has remained vacant since that time.

SEAD 70

SEAD 70 is a former fill area used for the disposal of construction debris. SEAD 70 is currently vacant and undeveloped.

SEAD 007-R-01

SEAD 007-R-01 (alias Grenade Range/EOD 1), is associated with the grenade range. This area was used as the practice range for familiarization and firing of rifle grenades and Light Anti-Tank Weapons (LAW).

Airfield Access Road

The property was previously used as a road for access to the SEDA Airfield and is intended to be transferred for continued use as a roadway.

3.3 USE, STORAGE, DISPOSAL AND RELEASE OF PETROLEUM

3.3.1 UNDERGROUND AND ABOVEGROUND STORAGE TANKS

3.3.1.1 Current Underground and Aboveground Storage Tanks

There are no current UST/AST sites on the property.

3.3.1.2 Former Underground and Aboveground Storage Tanks

There were 11 different underground storage tanks formerly used on the property. The USTs at buildings 804, 805, 813, 814, 815, 816, and 817 and one above-ground petroleum storage tank at Building 819 have been removed or closed in place. At the time of the removal there was evidence of petroleum contamination at the following two UST sites: 815 and 816. The spill at Building 815 occurred in 1994 at the time of removal of the UST, fuel oil was spilled into the excavation. Contaminated soil was removed. Tank removal was approved and closed out by NYSDEC on 12/2/1994. No further remediation required. At Building 816 contaminated soil was discovered at the time of the UST removal in 1998 (NYSDEC spill #9712296). The spill was closed out on 2/11/1998. No further remediation required.

Table 2-1 includes a summary of the former USTs/ASTs on the Property and the status of the tanks.

3.3.2 NON-UST/AST STORAGE, RELEASE, OR DISPOSAL OF PETROLEUM PRODUCTS

There is evidence of petroleum product storage or releases that may have been in excess of reportable quantities in the following areas:

- SEAD 12 (Radiological Waste Burial Sites) BRAC Parcel 53(3) HR and BRAC Parcel 98 (4) PS/PR/HS/HR; Soil at this site was found to be contaminated with volatile organic compounds and military debris. The estimated date of release was 1956 to 1995.
- SEAD 72 Mixed Waste Storage Facility, BRAC Parcel 57(3)PS/PR/HR; The mixed waste consisted of solvent-wetted paper wipes (solvents that may have been used included isopropanol, Freon®, TCE, acetone, and toluene). The estimated date of release was 1956 to 1995.

These releases were subsequently remediated as part of the installation restoration program. A summary of the non-UST/AST petroleum activities is provided in Table 2-1.

3.3.3 REVIEW OF PREVIOUS ENVIRONMENTAL REPORTS

A thorough review of environmental documentation was performed for the original EBS and was documented in that report. The new documentation reviewed with information relevant to this ECP Report Update included the following:

• Final Asbestos Containing Materials Assessment, Seneca Army Depot, Area 3, Revision 1.0, Galson & Galson, December 22, 1988

- U.S. Army Base Realignment and Closure 95 Program, Environmental Baseline Report, Woodward-Clyde, March 12, 1997
- SEDA's electrical transformer PCB survey, February 1998
- NEPA Record of Decision for the Disposal and Reuse of Seneca Army Depot Activity, May 12, 1998
- U.S. Department of Defense, Base Realignment and Closure, Ordnance and Explosives, Archives Search Report, Findings, Seneca Army Depot, US Army Corps of Engineers (USACE), December 1998
- Final Investigation of Environmental Baseline Survey Non-Evaluated sites SEAD-199A, SEAD-122(A,B,C,D,E), SEAD-123(A,B,C,D,E,F), SEAD 46, SEAD-68, SEAD-120(A,B,C,D,E,F,G,H,I,J), and SEAD-121(A,B,C,D,E,F,G,H,I), May 1999.
- Remedial Investigation Report, SEAD-46 and SEAD-57, Seneca Army Depot Activity, Draft, Parsons Engineering Science, May 2001
- SEDA's Bulk Petroleum Storage registration dated January 14, 2002
- Appendix H of SEDA's Spill Prevention Control and Countermeasure Plan, March 2002
- Final Remedial Investigation at the Radiological Waste Burial Sites (SEAD-12), Parsons, 2002
- Revised Final Remedial Investigation (RI) Report at the Radioactive Waste Burial Sites (SEAD-12), Parsons, August 2002
- Investigation of EBS Sites, Small Arms Range, Lake Shore Housing Area letter to the EPA dated September 23, 2002
- Seneca Army Depot Activity NRC License Termination and License Release Plan, January 2003
- Final Radiological Survey Report, SEAD-12 Phase I and Phase II Surveys, Parsons, March 2003
- Finding of Suitability to Transfer (FOST) Seneca Army Depot Activity, New York Conservation/Recreation Area, September 2003
- Ordnance and Explosives, Engineering Evaluation Cost Analysis Report, Parsons Engineering Science, February 2004
- Seneca Army Depot Activity, Final Decision Document- Mini Risk Assessment for the Inhibited Red-Fuming Nitric Acid (IRFNA) Disposal Site (SEAD-13), July 2004
- Geophysical Investigation Munitions Destruction Areas SEADs 46 & 57, Seneca Army Depot Activity, Final Data Report, Shaw Environmental, Inc., April 2005
- Final Closure Plan for Former RCRA Unit Building 803 Mixed Waste Storage Facility Solid Waste Management Unit SEAD-27, Parsons, October 2005
- Final Supplemental Remedial Investigation Report, Radioactive Waste Burial Sites (SEAD-12), Parsons, Parsons, October 2006

- Final Feasibility Study (FS) Report for the Radioactive Waste Burial Sites (SEAD-12).
 Prepared for U.S. Army Engineer Division, Huntsville and Seneca Army Depot, Parsons, January 2008
- Munitions Response Completion Report and CERCLA Closure, SEAD-46, SEAD-57, SEAD 002-R-01, and SEAD 007-R-01, Seneca Army Depot Activity, Draft Final, Parsons Infrastructure & Technology Group Inc., January 2009
- Technical Memorandum, Risk Assessment, Munitions Response Sites, Seneca Army Depot Activity, Draft Final, Parsons Infrastructure & Technology Group Inc., 2010
- Final Construction Completion Report. Removal Action at the Radiological Waste Burial Pit Site (SEAD-12), Seneca Army Depot Activity, Parsons, May 2012
- Final Proposed Plan for Radiological Waste Burial Sites (SEAD-12) and the Mixed Waste Storage Facility (SEAD-72), Seneca Army Depot Activity, Parsons, July 2014
- Record of Decision "Radioactive Waste Burial Sites (SEAD 12) and the Mix Waste Storage Facility (SEAD 72), March 30, 2015
- Land Use Control Remedial Design Seneca Army Depot, Romulus, NY Addendum 5 addressing SEAD 12, October 26, 2015
- Proposed Plan for SEAD-46, SEAD 003-R-01 [SEAD 57], SEAD 002-R-01 and SEAD 007-R-01(Seneca AD Munitions Response Sites) and SEAD 70 at Seneca Army Depot Activity, Draft Final, Parsons Federal, January 2017
- Land Use Control Remedial Design Seneca Army Depot, Romulus, NY Addendum 6 addressing SEAD 12, July 17, 2017
- Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70. Seneca Army Depot Activity, Parsons, March 2017

4.0 ADJACENT PROPERTIES

The Army has identified three unremediated sites which are located within 1,000 feet of the outer boundary of the property covered by this ECP Report Update. These sites will continue to be owned and controlled by the Army pending completion of the environmental remediation. These sites are as follows:

OD Grounds (SEAD 45), BRAC parcel 104(6)PR/HS/HR. The OD Grounds are located approximately 800 ft north of SEAD 003-R-01. The OD Grounds was used to destroy munitions. Operations at the OD Grounds began circa 1941 when the Depot was first constructed and continued at regular intervals until circa 2000 when the military mission of the Depot ceased. Site investigations have delineated the approximate extent of the impacts. The impacts do not extend into the parcels of interest in this ECP Update (**Figure 1**)

Small Arms Range, Airfield Parcel (SEAD 122B) – NFA with LUCs. The Small Arms Range (SAR) is located in the southwest corner of SEDA adjacent to the SEDA Airfield. The Air Force, Navy, and Army previously used the SAR as small arms qualification ground. The SAR consist of two contiguous bermed small arms ranges, one previously used for small arms training and the other previously used for machine gun targeting. The Final ROD determined that LUCs were appropriate on this parcel to restrict residential land use.

Plane Deicing Area (SEAD 122E) – NA with LUCs. The Plane Deicing Area is compromised of the three separate aircraft refueling areas at the former SEDA Airfield. All three of the deicing/refueling areas are located along the western side of the northwest-southeast runway. Two of the deicing/refueling pads are located near either end of the runway. The third deicing/refueling pad is located at the end of the short taxiway, west of the central portion of the runway. The general uses of SEAD 122E included the basic training of personnel and the operation of flights in support of the depot activities and security. The airfield was officially closed in 2000 and is no longer an active airfield, but is currently utilized by the NYS Police for training and special events. The Final ROD determined that LUCs were appropriate on this parcel to restrict residential land use.

The Army has determined that these sites were sufficiently investigated to identify the limits of contamination to establish an acceptable boundary. OD Grounds (SEAD 45) will be retained by the Army and delineation to prevent trespassing will be established. In addition, the Army will install fencing, warning signs, or other protective measures to prevent unauthorized access.

5.0 REVIEW OF REGULATORY INFORMATION

A component of the ECP is a review of reasonably ascertainable federal, state and local government records for the Property and surrounding properties where there has been a release or potential release of any hazardous substance or petroleum product which is likely to cause or contribute to a release or threatened release of any hazardous substance or petroleum product on federal real property. A regulatory database summary was requested from Environmental Data Resources, Inc. (EDR) and is in progress. The radius summary report will consolidate standard federal, state, local and tribal environmental record sources based on the ASTM D 6008-96 (2014) recommended minimum search distances from the Property. The draft version of Chapter 5 will be submitted following completion of the records review.

6.0 INTERVIEWS

An interview was conducted with the Seneca AD BRAC Environmental Coordinator/Caretaker New York District. The interview is included as **Appendix D**.

7.0 ENVIRONMENTAL CONDITION OVERVIEW

7.1 DISCUSSION AND IDENTIFICATION OF RECOGNIZED ENVIRONMENTAL CONDITIONS

This ECP Report Update identifies the following RECs on the subject parcels:

SEAD 12C LUCs Area

A portion of SEAD 12C around building 813/814 was remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of land use controls (LUCs). Land that underlies two unoccupied buildings (Buildings 813 and 814) and that is in the vicinity of former monitoring well MW12-37, is contaminated with volatile organic compounds (VOCs), primarily trichloroethene (TCE) at levels exceeding federal and state groundwater drinking water standards and state soil cleanup objective (SCO) levels. During a non-time critical removal action, the soil in the vicinity of MW12-37 was removed down to bedrock (approximately 3ft bgs) and the excavation and excavated soil were aerated. Potential vapor intrusion and groundwater recontamination concerns that remained in the vicinity of Buildings 813 and 814 as a result of being unable to excavate all TCE-contaminated soil from under Building 813 were addressed in the Final Record of Decision the Radioactive Waste Burial Sites (SEAD-12) and the Mixed Waste Storage Facility (SEAD-72) (Parsons, 2015) through the selection of appropriate land use restrictions. These LUCs include groundwater use restrictions, building use restrictions (due to vapor intrusion risks), and residential housing and school restrictions within the LUCs area of SEAD 12C (Buildings 813/814 only).

SEAD 46 LUCs Area

The SEAD 46, Small Arms Firing Range (Former 3.5-inch Rocket Range), portion of the property was remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. Although munitions removal was performed at the SEAD 46, the potential exists that MPPEH may remain at and could pose hazards to a future receptor. Munitions Responses removed 2,054 targets of which none were classified as MEC, 16 items were classified as MPPEH but were determined to be MD after perforating. MPPEH found at the site included illumination flares, fuzes, smoke signals, an M83 cluster bomb, and a 40 mm practice grenade. MPPEH in surface and subsurface soil is therefore a potentially complete pathway. The Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017) selected appropriate land use restriction to include residential use and intrusive activity restrictions within SEAD 46.

SEAD 13 LUCs Area

The SEAD 13 portions of the property were remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. The mini risk

assessment conducted at SEAD-13 concluded that the total non-cancer hazard index (HI) from all exposure routes is less than 1 for the construction worker, but exceeds 1 for the park worker (HI=4) and the recreational visitor (HI=2). The elevated HI for both receptors is due to ingestion of groundwater, with nitrate/nitrite-nitrogen, aluminum, and manganese in groundwater as the largest contributors of risk for both land uses. When the groundwater pathway is eliminated, the total hazard indices for these receptors are 0.008 and 0.006, meeting the EPA hazard index criteria of less than 1. Therefore, groundwater use restrictions were recommended for SEAD 13. The Final Decision Document – Mini Risk Assessment for SEAD 13, Inhibited Red Fuming Nitric Acid (IRFNA) Disposal Site (Parsons, 2004) selected appropriate land use restriction to include groundwater use restrictions at SEAD 13.

SEAD 002-R-01 LUCs Area

The SEAD 002-R-01(EOD-2 and EOD-3) portions of the property were remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. Although a munitions removal was performed at the SEAD 002-R-01 MRS, the potential exists that MPPEH may remain at and could pose hazards to a future receptor. MPPEH in surface and subsurface soil is therefore a potentially complete pathway. The Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017) selected appropriate land use restriction to include residential use and intrusive activity restrictions within SEAD 002-R-01.

SEAD 003-R-01 LUCs Area

The SEAD 003-R-01 MRS, alias SEAD-57, the former Explosive Ordnance Disposal Area (EOD-1) property, was remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. Munitions responses removed 7,485 targets of which 2 were classified as MEC. Three other MEC items were found at this site during an EE/CA prior to the removal action. MEC items removed during previous studies included two MK II Grenades, two 20mm projectiles, and one fuzed unfired 37mm projectile. Although a munitions removal was performed at the SEAD 003-R-01 MRS, the potential exists that MPPEH may remain at and could pose hazards to a future receptor. MPPEH in surface and subsurface soil is therefore a potentially complete pathway. The Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017) selected appropriate land use restriction to include residential use and intrusive activity restrictions within SEAD 003-R-01.

SEAD 007-R-01 LUCs Area

The SEAD 007-R-01 property was remediated to conditions suitable for the planned future use. Additional protectiveness is provided through the use of LUCs. Munitions responses removed 1,897 targets of which none were classified as MEC. 218 MPPEH items were detected related to the M73 Practice LAW Rocket and 40mm Practice Grenade. M73 Practice Rockets potentially contain small, smoke emitting, bursting charges. Although a munitions removal was performed

at the SEAD 007-R-01 MRS, the potential exists that MPPEH may remain at and could pose hazards to a future receptor. MPPEH in surface and subsurface soil is therefore a potentially complete pathway. The Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017) selected appropriate land use restriction to include residential use and intrusive activity restrictions within SEAD 007-R-01.

SEAD 70

The SEAD 70 property was remediated to conditions suitable for the planned future use. A risk assessment determined that available data for other hazardous substances, pollutants, and contaminants does not indicate a risk to any future receptors. Based on the absence of a MEC hazard and no known source of residual concentrations, future unlimited use and unlimited exposures is warranted at this AOC and No Further Action was the Selected Remedy. All environmental soil and groundwater remediation activities on the property have been completed. See: Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 (Parsons, 2017).

Airfield Road

The property includes no buildings and includes half of an existing roadway and road shoulder. The property was previously used as a road for access to the SEDA Airfield. The property is intended to be transferred for continued use as a roadway and is consistent with the intended reuse of the property as set forth in the Seneca Army Depot Reuse Plan and Implementation Strategy prepared for Seneca County.

7.2 DISCUSSION AND IDENTIFICATION OF OTHER PROPERTY CONDITIONS

7.2.1 LEAD-BASED PAINT

LBP is a hazard in residential buildings that were constructed prior to 1978. Lead accumulates in the body and can cause significant health problems in small children when ingested. Most facilities and buildings at SEDA were constructed before the DoD ban on the use of LBP paint in 1978 and are likely to contain one or more coats of such paint. In addition, some facilities constructed immediately after the ban may also contain LBP because inventories of such paints that were in the supply network were likely to have been used up at these facilities.

Based on the age of the buildings (constructed prior to 1978), lead-based paint (LBP) is presumed to be present in all of the buildings within the Parcels covered by this ECP update. The following buildings are presumed to contain LBP: Buildings 803, 804, 805, 813/814, 815, 816, 817, and 819.

7.2.2 ASBESTOS-CONTAINING MATERIAL

Asbestos-containing material (ACM) survey data are discussed in the original EBS. At that time, Buildings 803 and 813 were listed as having been surveyed and observed to not contain ACM, Buildings 815 and 816 were listed as having contained asbestos but being fully remediated, and

Buildings 804, 814, 817, 819 were listed as having ACM that had not been remediated. No information was provided on Building 805.

An ACM survey was conducted in June 2018 by a New York State – Department of Labor certified asbestos inspector who performed an inspection and limited sampling at Building 819. The survey was completed in accordance with local, state and federal regulations, and in compliance with sampling protocol detailed in the Asbestos Hazard Emergency Response Act. A visual inspection was performed within Buildings 803, 804, 805, 813/814, 815, 816, and 817 and was conducted to gather general observations on the conditions. Sampling of ACM was performed in Building 819.

During the 2018 ACM survey, a review of available historical records referenced in the original EBS was completed. The records indicated that ACM sampling, removals, and encapsulation of cleaned, bare surfaces was conducted by a two asbestos remediation companies: U.S. Thermal Ltd at Building 814 and Professional Asbestos Services at Buildings 815 and 816. ACM was removed in the following timeframes:

- Building 814: all identified ACM was removed in 1990.
- Building 815: all identified ACM was removed in 1992.
- Building 816: all identified ACM was removed in 1992.

The visual inspection conducted in June 2018 confirmed an ACM removal, followed by encapsulation of the bare surfaces, had occurred in Buildings 815 and 816. Replacement fiberglass pipe insulation was observed and encapsulant was observed to have been applied to bare piping. Newer fiberglass insulation was observed in Building 814. No ACM warning stickers (like those observed in Buildings 817 and 819) were observed in Buildings 814, 815, or 816.

The EBS reported that ACM surveys observed no ACM in Buildings 803 and 813. The visual inspection conducted in June 2018 confirmed that no ACM was likely present; however, no sampling was conducted, and elevated areas were not assessed.

ACM was identified in Buildings 817 and 819. ACM may also still be present in Buildings 804 and 805. ACM has not been surveyed in Building 805 and 804 was listed as containing ACM in the EBS. These buildings were visually inspected and no suspected ACM materials were noted; however, no sampling was conducted.

The ACM documented at Buildings 817 and 819 in the initial ACM survey in the EBS included: gasket material around furnace stack blower and flexible duct connections in Building 817 and air cell pipe and fitting insulation and flooring tiles in Building 819 (Galson & Galson, 1988).

During the visual inspection in June 2018, ACM warning stickers were observed on the gaskets and duct connections within Building 817 and on the pipe insulation and flooring tiles within the east and west bays of Building 819. The ACM acting as air cell pipe and fitting insulation in Building 819 was observed to be friable. No friable ACM was observed in Building 817; however, this building was not sampled during the June 2018 inspection. There was no evidence that previous surveys had investigated other rooms within Building 819, therefore additional asbestos sampling was conducted

in generator and boiler rooms located in the northeast and northwest corners of the building. ACM was confirmed in both of these locations of Building 819 (**Appendix C**).

7.2.3 MUNITIONS AND EXPLOSIVES OF CONCERN

Based on a review of existing records and available information, there was evidence that MEC may be present on the property. The property was previously used for military munitions-related activities (e.g., EOD training, live fire of rifle grenades and Light Antitank Weapons (LAW) with training rounds only, and a function test range for 3.5-inch rocket motors) that could result in the presence of MEC. The term "MEC" means military munitions that may pose unique explosives safety risks including: (A) unexploded ordnance (UXO), as defined in 10 U.S.C. §101(e)(5); (B) discarded military munitions (DMM), as defined in 10 U.S.C. §2710(e)(2); or (C) munitions constituents (e.g., TNT, RDX), as defined in 10 U.S.C. §2710(e)(3), present in high enough concentrations to pose an explosive hazard (32 CFR § 179.3).

A summary of the munitions response sites (MRS) on the property is as follows: SEAD 46, the Small Arms Firing Range (Former 3.5-inch Rocket Range); SEAD 002-R-01, East Explosive Ordnance Disposal (EOD) Ranges (Former EOD Area 2 and EOD Area 3); SEAD 003-R-01 (SEAD 57), Explosive Ordnance Disposal (EOD) Range 1; and SEAD 007-R-01, Rifle Grenade Range.

Between May through November 16, 2006, the Army conducted a munitions response to remove MEC to the depth of penetration of the munitions. The following munitions response sites (MRSs) were investigated:

- SEAD 46 3.5 Inch Rocket Range, Function Test Range for 3.5-inch rocket motors;
- SEAD 003-R-01 (SEAD 57) Explosive Ordnance Disposal (EOD) training range;
- SEAD 002-R-01 (SEAD 118 [EOD 2 and EOD 3]) EOD Areas 2&3, former EOD training ranges; and
- SEAD 007-R-01 (SEAD 118 [EOD 1]) Grenade Range, practice range for familiarization and firing of rifle grenades and Light Anti-Tank Weapons.

Each site was digitally geophysically mapped and/or surveyed on transects with analog instruments, targets were identified and excavated, and items of concern were evaluated. Results and conclusions of the munitions response removal actions indicate that there was evidence that MEC were previously present at SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01, and SEAD 007-R-01, and there remains a possibility that MPPEH may still remain. The remedy selected for the MRSs is implementation, maintenance, and monitoring of LUCs that prohibit the development or use of the sites listed above for residential housing, elementary and secondary schools, childcare facilities or playgrounds. See: Final Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70 dated March 2017 for additional information.

7.2.4 PCB EQUIPMENT

PCB are discussed in the original EBS. There are no changes to those descriptions.

7.2.5 RADIOLOGICAL MATERIALS

The following buildings were used for radiological activities: Building 803 was utilized for mixed waste storage and Buildings 815 and 816 were used for quality assurance (QA) inspection for special weapons maintenance. The Army conducted a radiological site assessment and concluded there is no evidence of any release of radiological materials at buildings 815 and 816, See: Final Radiological Survey Report – SEAD 12 Phase I and II Surveys dated March 2003. There was evidence of a release of radiological material at Building 803. The following actions were taken to remediate the radiological material:

• Building 803: As part of the SEAD-12 ESI and RI, Building 803 was scanned for radiological contamination using alpha, beta, and gamma radiation detection equipment. Wipe samples were also collected from the floor drains and vents in Building 803. The results of the scanning and wipe sample analysis indicate that Building 803 is compliant with the NYSDEC cleanup guideline (i.e., 10 millirems per year or mrem/yr) provided in the NYSDEC Cleanup Guidelines for Soils Contaminated with Radioactive Materials (DSHM-RAD-05-01). Elevated alpha and beta measurements were detected on one metal shelf in Room 6 during the building radiological survey. The Army sent the shelf for laboratory analysis of the contamination, and the laboratory in-turn disposed of the shelf accordingly.

All radioactive materials have been removed from the Property and the fill area at SEAD 12 was excavated. Radon contaminated paint, dials, and non-radioactive materials were disposed of properly. See the following reports for additional information:

- Final Record of Decision The Radioactive Waste Burial Sites (SEAD-12) and the Mixed Waste Storage Facility (SEAD-72) dated March 2015.
- Final Construction Completion Report, Removal Action at the Radiological Waste Burial Pit Site (SEAD-12), Seneca Army Depot Activity dated May 2012.
- Final Radiological Survey Report, SEAD 12 Phase 1 and 2 Surveys dated March 2003.
- Final RCRA Closure Plan, Building 803 Mixed Waste Storage Facility, SWMU #72 dated October 2005.
- Final Closure Report, Former Mixed Waste Storage Facility, Building 803 dated March 2010.

7.2.6 RADON

Radon surveys were conducted in Buildings 803, 813, 814, 815, 816, 817, and 819 on the property. In building 803, radon sampling showed 1 sample, at 12.1 pCi/l, which is above the EPA guidance of 4 pCi/l for air in habitable buildings. Following the radon detection and as part of the NRC final Status Survey, Building 803 was surveyed as a class I building due to its prior use. Upon the removal and disposal of a shelf with suspect radon paint, there were no other readings of concern. Building

803 is an industrial, uninhabitable building based on design and construction, so the radon sample was determined not to be of concern. See the Final Record of Decision the Radioactive Waste Burial Sites (SEAD-12) and the Mixed Waste Storage Facility (SEAD-72) Seneca Army Depot Activity (Parsons, 2015).

7.2.7 **MOLD**

The buildings surveyed during the 2018 ECP inspection were also inspected for visible mold and/or evidence of water staining in the buildings. Mold sampling was not performed. Mold and/or water staining were observed in several of the SEAD 12 buildings including: 805 (water on floor); 814 (visible mold and water damage to ceiling tiles); and 815 (visible mold and minor water leaking). Note: The future use will not be residential for any of these properties.

8.0 FINDINGS SINCE PREVIOUS ECP

This section documents the base-wide supplemental investigations and/or findings associated with the Property since the original ECP.

- Remedial Investigation Report, SEAD-46 and SEAD-57, Seneca Army Depot Activity,
 <u>Draft, Parsons Engineering Science, May 2001</u>. The RI summarizes the findings of the
 investigation activities that occurred within the Remedial investigation. The RI identified
 the levels of COCs within the groundwater and soil and classified them as hazardous or non hazardous.
- Munitions Response Completion Report and CERCLA Closure, SEAD-46, SEAD-57, SEAD 002-R-01, and SEAD 007-R-01, Seneca Army Depot Activity, Draft Final, Parsons Infrastructure & Technology Group Inc., January 2009. Based on the outlined munitions response actions performed by the Army, the Munitions Response Completion Report concluded that the Seneca AD Munitions Response Sites are free of all known MEC.
- Remedial Investigation (RI) Report at the Radioactive Waste Burial Sites (SEAD-12), Final, Parsons, August 2002. The RI consisted of geophysical investigations; radiological investigations, including the building surveys; a soil gas survey; test pitting; sampling and analysis of surface and subsurface soil, groundwater, surface water, and sediment; a baseline human health risk assessment (HHRA); an ecological investigation; and a screening-level ecological risk assessment (SLERA).
- Record of Decision "Radioactive Waste Burial Sites (SEAD 12) and the Mix Waste Storage Facility (SEAD 72), March 30, 2015. The ROD documents the U.S. Army's and the U.S. Environmental Protection Agency's selected remedies for SEAD-12 and SEAD-72. The Army and EPA have concluded that the majority of the land within SEAD-12 is suitable for unrestricted use and unlimited exposures with no further action required, with the exception of groundwater and soil within a small portion of SEAD-12. The Army and EPA have concluded SEAD-72 is suitable for unrestricted use and unlimited exposures with no further action required.
- Land Use Control (LUC) Remedial Design (RD) Report, Addendum 5, April 2015. The LUC RD Addendum 5 presents the selected land use restrictions documented for SEAD 12 in the March 2015 ROD for this site. Metes and bounds for the LUC-zone and applicable parcels are presented.
- Record of Decision SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70, March 2017. Seneca Army Depot Activity, Parsons, 2017. The ROD documents the selection of remedial action by the U.S. Army and the U.S. Environmental Protection Agency (USEPA) for the Munitions Response Sites (MRSs) of SEAD-46, SEAD 003-R-01 (SEAD 57), SEAD 002-R-01, SEAD 007-R-01 and the SEAD-70 Area of Concern. The remedial actions included munitions and ordnance detection and removal activities followed by environmental sampling and analysis to assess residual levels of hazardous substance, contaminants, and pollutants present at the sites.

- Land Use Control (LUC) Remedial Design (RD) Report, Addendum 6, October 2018. The LUC RD Addendum 6 presents the selected land use restrictions documented for SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01, SEAD 007-R-01 and SEAD 70 in the March 2017 ROD for these sites. Metes and bounds for the applicable parcels are presented.
- Final Decision Document- Mini Risk Assessment for the Inhibited Red-Fuming Nitric Acid (IRFNA) Disposal Site (SEAD-13), July 2004. The decision document summarizes the findings of significant investigations conducted on SEAD-13 and recommends remedial actions. Remedial action for soil, sediment, and surface water is not required. The Army recommends the development and implementation of an annual groundwater program and groundwater use restrictions.

9.0 CONCLUSIONS

The ECP Update Report was prepared in conformance with the scope and limitations of Army Regulation 200-1 (27 December 2007), DoD 4165.66-M (March 2, 2006) and ASTM Designation D6008-96 (2014), Standard Practice for Conducting Environmental Baseline Surveys. The following components were completed: government records review, visual inspection of the Property and adjoining properties and the declaration by the environmental professional responsible for the assessment.

Based on the components of this ECP Report Update and our review of supplemental findings/investigations (refer to Table ES-1), it is the opinion of this ECP Report Update that SEAD 12, SEAD 46, SEAD 002-R-01, SEAD 003-R-01, SEAD 70, and SEAD 007-R-01 be re-categorized as an ECP Category Type 4 property which, in accordance with ASTM D5746-98 (2016), Standard Classification of Environmental Condition of Property Area Types for Defense Base Closure and Realignment Facilities, is defined as "An area or parcel of real property where release, disposal or migration, or some combination thereof, of hazardous substances has occurred, and all remedial actions necessary to protect human health and the environment have been taken." The parcels were originally considered Category Type 6; however, remedial actions have been completed.

Based on the components of this ECP Report Update and our review of supplemental findings/investigations (refer to Table ES-1), it is the opinion of this ECP Report Update that the Airfield Access Road be categorized as an ECP Category Type 1 property which, in accordance with ASTM D5746-98 (2016), Standard Classification of Environmental Condition of Property Area Types for Defense Base Closure and Realignment Facilities, is defined as "An area or parcel of real property where no release, or disposal of hazardous substances or petroleum products or their derivatives has occurred (including no migration of these substances from adjacent properties)." The parcel was not previously categorized and no remedial actions were performed.

APPENDIX A Environmental Baseline Survey Report

U.S. ARMY BASE

REALIGNMENT AND

CLOSURE 95 PROGRAM

Environmental Baseline Survey Report

Seneca Army Depot Activity, New York

Prepared for U.S. Army Corps of Engineers New York District Seattle District

March 12, 1997

Woodward-Clyde Federal Services 4582 S. Ulster Street Stanford Place 3, Suite 1200 Denver, Colorado 80237

Contract No. DACA67-95-D-1001

EXECUTIVE SUMMARY

The Seneca Army Depot Activity, located in Romulus, New York, has been selected for closure under the 1995 Base Realignment and Closure (BRAC) process. The purpose of this Environmental Baseline Survey (EBS) is to classify discrete areas of real property associated with the Seneca Army Depot Activity, subject to transfer or lease, into one of the seven standard environmental condition of property area types as defined by Community Environmental Response Facilitation Act (CERFA) guidance and the Department of Defense (DOD) BRAC Cleanup Plan (BCP) Guidebook (DOD 1993). This is achieved by identifying, characterizing. and documenting the obviousness of the presence or likely presence of a release or threatened release of hazardous substances or petroleum products associated with the historical and current use of the Seneca Army Depot Activity. Releases at properties adjacent to the Seneca Army Depot Activity that could affect the environmental condition of the installation property are also identified, characterized, and documented. Additionally, areas containing or suspected of containing non-Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) contamination substances (e.g., asbestos-containing material, lead-based paint) that may limit or preclude the transfer or lease of the property for unrestricted use are delineated separately as qualified.

The seven standard environmental condition of property area types (categories) are presented in Section 1.3. Areas that are designated as Category 1, 2, 3, or 4 are suitable for transfer or lease, subject to consideration of the qualifiers. Areas that are currently designated as Category 5, 6, or 7 are not suitable for transfer.

The real property evaluated under this investigation of the Seneca Army Depot Activity consists of three geographic areas that together encompass approximately 10,634 acres, all of which were identified as BRAC property, subject to transfer or lease.

The Seneca Army Depot Activity was established in 1941 as a munitions and general purpose storage depot. In addition, the Seneca Army Depot Activity mission has included the demilitarization and destruction of munitions. Although the munitions currently stored at the Seneca Army Depot Activity are conventional, from the 1950s to 1993 the Seneca Army Depot Activity mission included the storage and maintenance of special weapons.

EXECUTIVE SUMMARY

To prepare the EBS report, Woodward-Clyde reviewed existing installation documents; federal, state, and local government records; and aerial photographs. A site visit was conducted that included visual inspections of the property and surrounding properties, and employee interviews. Additionally, reasonably obtainable federal, state, and local government records for adjacent properties were reviewed. No sampling activities were associated with this EBS.

The information provided in this Final EBS Report is current as of July 1996; however, comments received from installation personnel and the regulatory community on the Draft and Draft Final EBS Reports have been incorporated, as appropriate.

The survey and parcelization of the Seneca Army Depot Activity identified 113 BRAC parcels based on the environmental condition of the property. Table 5-1a and Figure 5-1 present the BRAC parcels and corresponding categorizations. Of the approximately 10,634 acres identified for transfer or lease, 8,689.27 acres are designated as Categories 1 through 4, as shown in the BRAC Acreage Summary Table. The remaining 1,944.73 acres of BRAC property are designated as Categories 5 through 7. Additionally, 1,804.58 acres of the categorized parcels were designated qualified for asbestos-containing material (ACM), lead-based paint (LBP), polychlorinated biphenyls (PCBs), radon, unexploded ordnance (UXO) and/or ordnance fragments, and/or radionuclides. Table 5-1b and Figure 5-1 present the qualified parcels.

BRAC ACREAGE SUMMARY TABLE SENECA ARMY DEPOT ACTIVITY, NEW YORK

SECTIONONE INTRODUCTION

1.0 INTRODUCTION

The Environmental Baseline Survey (EBS) report for the Seneca Army Depot Activity was prepared by Woodward-Clyde Federal Services (Woodward-Clyde) for the U.S. Army Corps of Engineers (USACE) under Contract No. DACA67-95-D-1001, Delivery Order No. 0010. This section describes the purpose and scope of the work conducted in preparing the U.S. Army Base Realignment and Closure (BRAC) 95 EBS report.

The information provided in this Final EBS Report is current as of July 1996; however, comments received from installation personnel and the regulatory community have been incorporated, as appropriate. The comments and corresponding responses have been compiled in a Comment Response Package that is included as Appendix A.

1.1 BRAC PROGRAM OVERVIEW

Prior to the late 1980s, base closure was a time-consuming and inconsistent process. The Secretary of Defense, in cooperation with Congress, proposed a base closure law to create a process to close bases and bring base infrastructure in line with force structure. Public Law (PL) 100-526, enacted in 1988, created the Commission on Base Realignment and Closure. The law charged the Commission with recommending installations for closure or realignment based on an independent study of the domestic military base structure.

The closure process was refined in PL 101-510, in which Congress created the Defense Base Closure and Realignment Commission. The process identified installations based on eight criteria, including four military value criteria; savings and return-on-investment; and the economic and environmental impacts of closure. The Commission met in 1991, 1993, and 1995, and its recommendations are currently being implemented by the Department of Defense (DOD).

The BRAC environmental restoration program is similar to DOD's Installation Restoration Program (IRP), but it has been expanded to include non-Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) contamination substances that are not normally addressed under the IRP, including asbestos-containing material (ACM), lead-based

SECTIONONE INTRODUCTION

paint (LBP), polychlorinated biphenyls (PCBs), radon, unexploded ordnance (UXO) and/or ordnance fragments, radionuclides, and pesticides (biocides).

The Community Environmental Response Facilitation Act (CERFA) (PL 102-426) was enacted in 1992 and amends Section 120 of CERCLA. CERFA directs federal agencies to evaluate all base closure and realignment property to identify uncontaminated parcels and allows the transfer or lease of remediated parcels when the successful operation of an approved remedy has been demonstrated. The CERFA identification process considers hazardous substances and petroleum products.

1.2 PURPOSE AND SCOPE OF ENVIRONMENTAL BASELINE SURVEY

The BRAC 95 environmental restoration program for the Seneca Army Depot Activity was initiated by conducting an EBS. The EBS included the review of existing installation environmental documents; federal, state, and local government records; and aerial photographs. A site visit, which included visual inspections of site facilities and adjacent properties, and interviews with current and former employees were also conducted. Additionally, reasonably obtainable federal, state, and local government records for adjacent properties were reviewed. The EBS report describes the environmental condition of the property and will be used to support determination of the suitability to transfer or lease.

The purpose of the EBS is to classify discrete areas at the Seneca Army Depot Activity into one of seven standard environmental condition of property area types as defined by CERFA guidance and the DOD *BRAC Cleanup Plan (BCP) Guidebook* (DOD 1993). This is achieved by:

- Identifying, characterizing, and documenting the obviousness of the presence or likely presence of a release or threatened release of a hazardous substance or petroleum product associated with the historical and current use of the Seneca Army Depot Activity.
- Identifying, characterizing, and documenting the obviousness of the presence or likely presence of a release or threatened release of a hazardous substance or

petroleum product from an adjacent property that is likely to cause or contribute to contamination at the Seneca Army Depot Activity.

No sampling or analysis activities were conducted during this survey.

1.3 DEFINITIONS

The following definitions are used in this report:

- **BRAC property:** The installation real property that is subject to transfer or lease. Real property includes land and rights in land, ground improvements, utility distribution systems, pipes or pipelines, buildings, and other structures located on the property and affixed to the land.
- Adjacent properties: Those properties, on or off the installation, contiguous to or nearby the boundaries being surveyed that are likely to cause or contribute to contamination and affect the results of the EBS or the classification of the BRAC property into standard environmental condition of property area types.
- **BRAC parcel:** An area of BRAC property that can be segregated from its surrounding areas based on the environmental condition of the area.
- **Hazardous substances:** Substances listed in 40 Code of Federal Regulations (CFR) 302.4, CERCLA Hazardous Substance Table.
- Petroleum: Any petroleum product or its derivatives, including aviation fuel and motor oil.
- Environmental condition of property area type: Any of the seven standard environmental condition of property area types (categories) as defined in the CERFA guidance and the DOD *BCP Guidebook* (DOD 1993) and presented in Table 1-1.

Table 1-1 ENVIRONMENTAL CONDITION OF PROPERTY DEFINITIONS

CATEGORY 1

Areas where no storage for one year or longer, release, or disposal of hazardous substances or petroleum products has occurred (including no migration of these substances from adjacent properties). Additionally, includes areas where no evidence exists for the release, disposal, or migration of hazardous substances or petroleum products; however, the area has been used to store less than reportable quantities of hazardous substances (40 CFR 302.4) or 600 or fewer gallons of petroleum products.

CATEGORY 2

Areas where only storage of hazardous substances in amounts exceeding their reportable quantity or petroleum products exceeding 600 gallons has occurred, but no release, disposal, or migration has occurred.

CATEGORY 3

Areas where storage, release, disposal, or migration of hazardous substances or petroleum products has occurred, but at concentrations that do not require a removal or remedial action.

CATEGORY 4

Areas where storage, release, disposal, or migration of hazardous substances or petroleum products has occurred, and all removal or remedial actions to protect human health and the environment have been taken.

CATEGORY 5

Areas where storage, release, disposal, or migration of hazardous substances or petroleum products has occurred, and removal or remedial actions are underway, but all required actions have not yet been implemented.

CATEGORY 6

Areas where storage, release, disposal, or migration of hazardous substances or petroleum products has occurred, but required removal or remedial actions have not yet been initiated.

CATEGORY 7

Areas that are not evaluated or require additional evaluation.

- Suitable for transfer: BRAC parcels that are designated as Category 1, 2, 3, or 4 are suitable for transfer or lease, subject to consideration of the non-CERCLA qualifiers.
- **Not suitable for transfer:** BRAC parcels that are currently designated as Category 5, 6, or 7 are not suitable for transfer.
- **Reserve enclave:** An area of the installation real property that will be retained by DOD. In the case of the Seneca Army Depot Activity, this property was characterized as part of the EBS.

SECTIONONE INTRODUCTION

• Parcel labels: Each BRAC parcel has been given a number to which appropriate descriptive labels are attached. The numbers consist of a unique parcel identification number and an environmental condition of the property category number. The labels consist of a designation describing the type of contamination or storage, if applicable. The following designations are used to indicate the type of contamination or storage present in a parcel.

PS = Petroleum storage

PR = Petroleum release or disposal

HS = Hazardous substance storage

HR = Hazardous substance release or disposal

Examples of this identification system follow:

- 2(1) indicates that the second BRAC parcel is designated as a Category 1 parcel.
- 12(3)HR indicates that the twelfth BRAC parcel is designated as
 Category 3 because of a documented hazardous substance release, but
 the concentrations do not warrant remediation.
- Qualified parcels: Areas containing or suspected of containing non-CERCLA contamination substances that may limit or preclude the transfer or lease of the property for unrestricted use. These parcels are delineated separately and labeled with the letter "Q" for "qualified." Qualified parcels overlay all environmental condition of the property categories (i.e., Categories 1 through 7). The qualified parcel labels are identified with the following designator, as applicable:

A = Asbestos-containing material (ACM)

L = Lead-based paint (LBP)

P = Polychlorinated biphenyls (PCBs)

SECTIONONE INTRODUCTION

R = Radon

X = Unexploded ordnance (UXO) and/or ordnance fragments

RD = Radionuclides

For all parcels, "(P)" is used to indicate that the presence of a contaminant is possible, but that data are unavailable for verification.

For example, the fifth BRAC parcel with the presence of ACM and the possible presence of LBP would be labeled 5Q-A/L(P).

1.4 LIMITATIONS

The conclusions presented in this EBS report are based on information that was reasonably available from the designated installation contacts and other public sources at the time the EBS was conducted. In addition, information obtained from interviews has been assumed to be correct and complete unless contradictory information was obtained through other sources.

A representative number of buildings was visually inspected during the EBS field investigation conducted from November 13 through December 12, 1995. A 100 percent visual inspection of all buildings was not practical because of the size of the installation and the number of buildings. Buildings were grouped by "like usage and design" (e.g., storage igloos, warehouses, housing units), and a random sample of approximately 10 percent of these buildings was visually inspected. Similarly, a 100 percent visual survey of all undeveloped areas could not be accomplished. Obvious disturbed areas, areas revealed to be suspect through aerial photograph analysis, and areas identified as being suspect during interviews were visually inspected, as well as a representative sampling of other areas. Visual inspections were not conducted in areas that posed a health and safety risk to the field team (e.g., areas of reported ammunition disposal).

1.5 GENERAL GEOGRAPHIC AND ENVIRONMENTAL SETTINGS

1.5.1 Demographics

According to the 1990 Census, 33,683 persons lived in Seneca County, New York. This figure indicates that the population has decreased by 50 people since the 1980 census. Just under half

SECTIONONE INTRODUCTION

of the county's population reside in one of five villages — Interlaken, Lodi, Ovid, Waterloo, and Seneca Falls — with the latter two villages having the largest population. The towns nearest to the Seneca Army Depot Activity — Varick, Romulus, Ovid, and Covert — have populations of approximately 2,200 people each (STV/Lyon 1990).

1.5.2 Physical Setting

The Seneca Army Depot Activity, an active military facility, is located near Romulus, New York, approximately 40 miles south of Lake Ontario. The site is at an elevation of approximately 600 feet above mean sea level (MSL) in an uplands area forming a divide between Cayuga Lake to the east and Seneca Lake to the west, two of the New York Finger Lakes. Most of the surrounding area is characterized by sparsely populated farmlands. Adjacent to the facility on the east is New York State Highway 96 and on the west is New York State Highway 96A (Parsons Engineering Science 1995a). A map of the installation is presented in Figure 1-1.

1.5.3 Climatology

The area around the Seneca Army Depot Activity is characterized as cool, with an average January temperature of 23°F and a July average temperature of 69°F. During the summer, and parts of the spring and fall, wide temperature differences between daytime highs and nighttime lows occur. Precipitation is fairly evenly distributed throughout the year, averaging about three inches a month. A significant amount of winter precipitation is provided by nearby Seneca Lake, Cayuga Lake, and Lake Ontario, which also help moderate the local climate. Annual snowfall averages about 60 inches. Wind directions are most commonly westerly and west-southwesterly. Although wind velocities are generally moderate, there are many days during winter months when winds are sufficient to cause blowing and drifting snow (Engineering Science 1994c).

1.5.4 Hydrology

Eight drainages draw the surface water from the Seneca Army Depot Activity in two general directions. Ditches and streams carry the surface water from the southern portion of the installation into Indian and Silver Creeks, which flow into Seneca Lake just south of the airfield. Kendaia Creek, which flows into Seneca Lake near the Lake Housing Area, drains the administration and central areas of the depot. Reeder Creek, which also flows into Seneca Lake.

drains the northeastern and north-central portions of the Seneca Army Depot Activity. Kendig Creek drains the northeastern portion of the depot, including the area known as the Duck Ponds. This creek flows north into the Cayuga-Seneca Canal, which flows to Cayuga Lake (U.S. Army Toxic and Hazardous Materials Agency [USATHMA] 1980; Engineering Science 1994c).

1.5.5 Geology and Soils

Underlying the general area is a broad north-to-south trending series of rock terraces mantled by glacial till. The region is part of the Appalachian Plateau and is underlain by a tectonically undisturbed sequence of Paleozoic shales, sandstones, conglomerates, limestones, and dolostones. The vicinity of the Seneca Army Depot Activity is characterized by Devonian rocks of the Hamilton group that are monoclinally folded and dip gently to the south. No evidence of faulting or folding is present. A 600- to 1,500-foot thick sequence of limestones, calcareous shales, siltstones, and sandstones characterize the Hamilton group (Parsons Engineering Science 1995a).

Four formations have been identified within the Hamilton group and, from oldest to youngest, they are: the Marcellus, Skaneateles, Ludlowville, and Moscow Formations. Moscow Formation rocks are generally located under the eastern portion of the Seneca Army Depot Activity, while the western portion is located in the older Ludlowville Formation. Both of these formations are typified by gray, calcareous shales and mudstones and thin limestones with numerous horizons of invertebrate fossils. The Skaneateles and Marcellus Formations are black and dark gray fossiliferous shales (Parsons Engineering Science 1995a).

Wisconsin event glacial till deposits overlay the Hamilton Formation shales. The Seneca Army Depot Activity is located on the western edge of a large glacial till plain. Although locally variable, the till is characterized by horizons of unsorted silt, clay, sand, and minor gravel. The thickness of these till deposits is variable across the Seneca Army Depot Activity and generally ranges from 1 to 15 feet, although in some locations the till is more than 30 feet thick. The till is thin, and bedrock is exposed or within three feet of the surface in some locations of the central and eastern portions of the Seneca Army Depot Activity (Parsons Engineering Science 1995a).

SECTIONONE INTRODUCTION

Soil associations found on the Seneca Army Depot Activity include the Darien-Angola Association that covers the main part of the installation and the Honeoye-Lima Association that is found mainly at the Lake Housing Area. The Darien-Angola Association is characterized by deep to moderately deep, somewhat poorly drained soils that have a silty clay loam and clay loam subsoil. Honeoye-Lima Association soils are deep, well drained soils that have a heavy silt-loam to heavy loam subsoil (Parsons Engineering Science 1995a).

1.5.6 Hydrogeology

Within Seneca County, four distinct hydrogeologic units have been identified: two distinct shale formations, a series of limestone units, and unconsolidated glacial drift. Groundwater in the county is minimally acceptable for use as potable water because it is very hard. About 95 percent of the groundwater wells in Seneca County are used for domestic or agricultural purposes and about five percent are used for commercial, industrial, or municipal purposes. Seneca Falls and Waterloo, the two largest communities in the county, both use surface water as municipal supplies, specifically Cayuga Lake and the Seneca River, respectively. Ovid and Interlaken villages both use groundwater for public supplies. Ovid, which is located about five miles south of the Seneca Army Depot Activity, obtains water from two shallow, gravel-packed wells located within a quarter-mile of the center of the village. Interlaken is located about 11 miles south of the Seneca Army Depot Activity and its primary water supply is from a well located about 1.5 miles northeast of the village center. Two wells located about 1.5 miles southwest of the village are used for backup (Parsons Engineering Science 1995a).

Three geologic units are used to produce water for both domestic and agricultural purposes. These units are a bedrock aquifer of predominantly shale, an overburden deposit that includes the glacial till, and a deep aquifer within beds of limestone. Because it is between 100 and 700 feet deep, the limestone source is the least used of the three for water supply. The shale aquifer is the most common source with the glacial till aquifer being intermediate (Parsons Engineering Science 1995a).

SECTIONONE INTRODUCTION

Water flow in the unconsolidated glacial till deposits aquifer would be expected to trend in a direction consistent with the ground surface elevations. There is information suggesting that there is a groundwater divide about halfway between Lake Cayuga and Seneca Lake. Seneca Army Depot Activity is located on the western slope of this divide, and groundwater would, therefore, be expected to flow toward Seneca Lake to the west (Parsons Engineering Science 1995a).

2.0 SOURCES OF INFORMATION

The EBS investigation meets the requirements of CERCLA (1980) Section 120(h), as amended by CERFA and implemented by DOD. This section describes the sources of information that were used to support the determination of the environmental condition of the Seneca Army Depot Activity property.

2.1 INSTALLATION/BRAC PROPERTY

Relevant information and documents that were used to conduct the Seneca Army Depot Activity EBS are identified in the following sections. This information includes environmental studies; federal, state, and local regulatory records; interviews of installation personnel; and visual inspections within an approximately one-mile distance from the installation.

2.1.1 Existing Documents

Existing documents were reviewed to evaluate the environmental conditions at the Seneca Army Depot Activity. The 23 documents presented in Table 2-1 are the primary documents used in the preparation of this EBS report. Each document has a document identification number, which is referenced in the CERFA map tables (Table 5-1a and 5-1b) in Section Five. These documents are the primary source of evidence for the resulting environmental condition of property area categorization. A complete list of references is included in Section Six.

- Ash landfill investigations
- Groundwater sampling results (various locations)
- Non-CERCLA issues

2.1.2 Federal, State, and Local Government Regulatory Records

A search of federal, state, and local records pertaining to the Seneca Army Depot Activity and a search of reasonably obtainable records of adjacent (within a two-mile radius) properties was performed. In addition, a search of the environmental databases listed in Table 2-2 was conducted.

Table 2-2 ENVIRONMENTAL DATABASES

DATABASE	CONTENTS
National Priorities List (NPL)	The NPL lists Superfund sites, which are sites that are determined by the U.S. Environmental Protection Agency (EPA) to pose an immediate public health hazard requiring immediate cleanup response.
Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS)	The EPA CERCLIS database contains information on CERCLA sites, and is updated periodically.
Emergency Response Notification System (ERNS)	EPA maintains ERNS, which is a repository for information on hazardous spills nationwide. This information is based on reports filed by local agencies (e.g., municipal fire, police, or environmental departments), county agencies, state entities, and federal agencies (e.g., U.S. Coast Guard, National Response Center, and EPA).
Resource Conservation and Recovery Act (RCRA) Facilities Database	Facilities listed in this EPA database are RCRA facilities for which a Corrective Action has been issued to address waste handling problems.
Resource Conservation and Recovery Information System (RCRIS)	This database contains information on all RCRA facilities. The facility types include: large quantity generators; small quantity generators; conditionally exempt facilities; transporter facilities; and treatment, storage, and disposal (TSD) facilities. Large quantity generators generate over 1,000 kilograms (kg) hazardous waste/month, or greater than 1 kg acutely hazardous waste as defined by RCRA. Small quantity generators generate more than 100 and less than 1,000 kg of hazardous waste during any calendar month.
Facility Index System (FINDS)	EPA references any facility or event that has been issued an EPA identification number; the EPA program office that issued the identification number is also listed. These listings do not necessarily reflect releases.
State Priorities List	This state of New York database contains sites considered to be actually or potentially contaminated and presenting a possible threat to human health and the environment.

Table 2-2 (Continued)

DATABASE	CONTENTS
New York State Hazardous	This state of New York database contains state-designated
Waste Sites and Landfills	hazardous waste cleanup sites and landfills within a one-mile
Database	radius of the Seneca Army Depot Activity.
New York State Registered	This database contains information and all known and registered
Underground Storage	USTs in the state of New York, and is updated periodically.
Tanks (USTs) Database	
New York State Leaking	This database contains information on USTs reported to the state
Underground Storage	of New York as leaking.
Tanks (LUSTs) Database	

The complete database search report, including a map indicating locations of sites identified below, is provided in Appendix B. These searches produced information related to NPL status, spills, LUSTs, cleanup records, RCRA, CERCLIS, and air emissions. The database search has identified the following information:

- The Seneca Army Depot Activity is a federal Superfund site (NPL).
- It is listed on CERCLIS and EPA FINDS.
- It has had RCRA violations and corrective actions imposed.
- It has reported spill incidents and LUSTs.
- It is on the state cleanup list.
- It operates hazardous waste treatment, storage and disposal facilities.
- It is a hazardous waste generator.
- It has a permit to discharge waste water.
- It produces regulated air emissions.
- It operates a public drinking water system.
- It utilizes aboveground and underground storage tanks.

The database search revealed that the spills listed in Appendix B have occurred at the Seneca Army Depot Activity and have been reported to the New York State Department of

SECTIONTWO

SOURCES OF INFORMATION

Environmental Conservation (NYSDEC). Table 2-3 (following Section Two) presents spill information based on the database search and installation records. It represents the most up-to-date information available on historic spills at the Seneca Army Depot Activity.

The only spill reported from the ERNS database search was a 3,000-gallon fuel oil spill that occurred on October 5, 1987.

The database search revealed that the LUSTs listed in Appendix B are located at the Seneca Army Depot Activity and have been reported to NYSDEC. Table 2-4 (following Section Two) presents LUST information based on the database search and installation records. It represents the most up-to-date list of LUSTs currently or formerly at the Seneca Army Depot Activity.

State cleanup records indicate that a remedial action is pending at an open dump site at the Seneca Army Depot Activity (Ash Landfill Operating Unit [OU]). The actual status of this OU, however, is that the contaminated soils have been remediated as of June 1995 and the groundwater mitigation control remedy has not been selected.

The database search revealed that the Seneca Army Depot Activity is listed as a RCRA large quantity generator of wastes and as a storage and treatment facility (NY0213820830). This database also shows the LORAN-C facility as a large quantity generator of wastes (NY6690331404). The RCRA compliance history for the Seneca Army Depot Activity and LORAN-C shows no Class One violations. However, there are outstanding compliance issues related to closure and post-closure requirements for the RCRA TSD facilities.

CERCLIS records indicate that five operable units are currently under remedial investigation.

The database search also indicated that the Seneca Army Depot Activity is in compliance with air emissions permit requirements.

2.1.2.1 Permits and Permit Applications

The following permit and permit information is maintained by the Seneca Army Depot Activity:

- Information concerning USTs and aboveground storage tanks (ASTs) was identified in a list provided by the Seneca Army Depot Activity and is included as Appendix C. The information in this table includes the building location of the tank; the New York State registration number (SRN); the EPA registration number, if registered; capacity in gallons; product stored; type (AST or UST); location (inside or outside); year installed; and service status.
- National Pollution Discharge Elimination System (NPDES) Permit NY0021296 covers both operational sewage treatment plants located at Buildings 4 and 715 (USATHMA 1980).
- The Seneca Army Depot Activity was approved for Part A, Interim Status as a hazardous waste treatment, storage, and disposal facility (TSDF) in 1980. Part B Final Status TSDF was applied for in November 1986 (STV/Lyon Associates 1990).
- DA Authorization A31-60-01 for storage of radioactive calibration and check sources for uranium-235, americium-241, and krypton-85 stored in Buildings 321 and 806 (USATHMA 1980).
- Memorandum regarding authorization for open pit detonation, SDSSE-HE (200-1c) (Absolom n.d.).
- Letter regarding discharge criteria for ash landfill (NYSDEC 1995a).
- Permit application for Part 60 SWM Facility for landspreading sewage treatment plant sludge (NYSDEC 1993c).
- Part 373 permit application for hazardous waste management facilities (Seneca Army Deport Activity 1991).
- Air permits that cover 22 registered point sources (13 active, 9 inactive) at the Seneca Army Depot Activity are listed in Table 2-5 (Seneca Army Depot Activity, List of Air Permits).

Table 2-5
AIR PERMITS

PERMIT NUMBER	FACILITY	EXPIRATION DATE	TYPE	STATUS

07183	718	4/1/97	Smoke	Inactive

2.1.2.2 Inspection Reports and Enforcement Actions

The following inspection reports were found on file at the Seneca Army Depot Activity:

- Federal Facility Agreement Under CERCLA Section 120, between EPA Region II, the Department of the Army, and NYSDEC, January 1993 (EPA, Region II et al. 1993)
- Environmental Compliance Assessment System Review for the Seneca Army Depot Activity, U.S. Army Materiel Command (USAMC), April 11-15, 1994 (USAMC 1994)

- Tank Test Results for 1992, 1994, and 1995, Environmental Products and Services (Environmental Products and Services, Inc. n.d.)
- Investigation and Evaluation of Underground Storage Tanks, USACE, Huntsville Division, September 1989 (U.S. Army Corps of Engineers 1989)
- Radioactive Materials Decommissioning Survey, Radiological Assistance Team (Radiological Assistance Team, Seneca Army Depot Activity 1993).
- Innovative Wetlands Wastewater Treatment Project Sampling and Analysis Report, Lozier Laboratories, Inc. (Lozier 1982)
- Memorandum Regarding LBP testing in Buildings 211-A and 234-D and the Lake Housing Area (Seneca Army Depot Activity 1993)
- Pesticide Monitoring Survey evaluating pesticide distribution in selected components of the environment at Seneca Army Depot Activity by the U.S. Army Environmental Hygiene Agency (USAEHA) (USAEHA n.d.)
- Inspection report of registered pesticide applicator by the NYSDEC (NYSDEC 1991)
- NYSDEC Annual Inspection Reports from March and October 1993, and October 1994 (NYSDEC 1993a, 1993b, 1994b)
- Inspection report on 60,000-gallon fuel oil tank (SRN187) from the National Association of Corrosion Engineers (National Association of Corrosion Engineers 1994)
- A water systems operation report from the NYSDEC (NYSDEC 1995b)

2.1.3 Aerial Photographs

The Environmental Photographic Interpretation Center (EPIC) conducted an imagery analysis of aerial photographs of the Seneca Army Depot (EPIC n.d.). The year of the analysis is not stated in the report but the photographs used dated from 1954, 1963, 1969, and 1981. This analysis found two areas that warranted in-depth discussion. Area A is a large demolition ground (Open Burning/Open Demolition Grounds), and Area B is reported to cover most of the potentially hazardous activities and sites at the depot. Area B is located in the east-central part of the depot and it includes the South Admin area, the IPE area, and the former popping plant (Building S-311) and surrounding area.

Aerial photograph analysis was conducted as part of the EBS field investigation for the Seneca Army Depot. A member of the EBS field team was given access to the filing room in the Engineering Office (Building 123). All available historical aerial photographs were reviewed for evidence of past activities that may have involved excavations, dumping areas, or any unexplained disturbance on the ground. The results of the aerial photograph review were then compared to the results of the records review, interviews, visual inspections, and the analysis of the rumored sites.

2.1.4 Existing Property Maps

Existing property maps were utilized to assist in identifying past usage and practices at the Seneca Army Depot Activity that may have contributed to environmental degradation or concerns. Property maps were also used to determine current physical conditions of the installation and to focus on areas where there may have been concerns regarding past or current waste management practices. A digital base map was provided by the Seneca Army Depot Activity Environmental Office and was used in preparing the CERFA map included with this report.

2.1.5 Interviews

To facilitate the review of the installation's environmental history and practices, interviews of current and former employees involved in operations were conducted. To ensure the interview process was thorough, standardized interview forms were created and utilized. A sample interview form is presented in Appendix D.

2.1.6 Visual Inspections

As required by CERCLA 120(h)(4)(A)(iv) and (v) and DOD guidance, a visual inspection of the real property and properties immediately adjacent to the property was conducted and is addressed in this EBS report. On-site visual inspections of the installation property and adjacent properties were conducted by the EBS field team during the period of November 13 to December 12, 1995. Visual inspections conducted by the field team included grounds, buildings, structures, and equipment. Inspection methods included visual inspections from automobiles and surveys conducted during site walks. To ensure the visual inspections were thorough, standardized visual inspection forms were created and utilized. A sample visual inspection form is presented in Appendix E.

The visual inspection of every building and all undeveloped areas was not possible during the site visit. In areas where there were collections of like buildings with the same use (e.g., storage igloos), a random 10 percent sample was inspected. Areas of possible contamination or areas that were reported in interviews as being suspect were inspected unless doing so posed a health and safety risk to the surveyors. Table 2-6 lists the facilities that were visually inspected. Numerous open areas without buildings were also inspected but are not listed in the table.

Table 2-6 VISUAL INSPECTIONS CONDUCTED AT THE SENECA ARMY DEPOT ACTIVITY

2-11

	D704, D811, E107, E203, E313, E410, E508, E704, E708, E811, E805
Warehouse Area	Tank Farm, 323, 324, 333, 346, 356, 374
IPE Area	DRMO Yard, 312, 317, 319, 320, 321, 360, 372

Visual inspections of adjacent properties were performed primarily by automobile surveys and observations from advantageous points. This was supplemented with occasional pedestrian surveys of areas that presented a ready access. The Seneca Army Depot Activity is mainly surrounded by agricultural land. The town of Willard is situated about one mile southeast of the southeast corner of the depot, and Romulus is located adjacent to the eastern border of the installation near its center.

2.1.7 Title Documents

CERCLA 120(h)(4)(A)(ii) and DOD guidance require a review of the "recorded chain of title documents regarding the real property." For the EBS, tract maps and title and transfer documents were reviewed to identify the prior property owners at the time of transfer to the U.S. Army. The purpose of this review was to collect additional information concerning the prior use and environmental condition of the property at the time of transfer to the U.S. Army. Previous ownership and the dates of transfer are presented in Appendix F. Copies of the deeds relating to these land transfers are on file at Woodward-Clyde and are available upon request.

3.0 PROPERTY CHARACTERIZATION

This section presents an overview of past and current operations at the Seneca Army Depot Activity and a discussion of potential environmental contamination associated with these operations. It provides a description of the installation facilities and addresses past and current waste management practices at the Seneca Army Depot Activity.

3.1 PROPERTY OVERVIEW

Historic land uses of the Seneca Army Depot Activity have been documented in reports prepared by the USACE and its subcontractors. Information was collected through record searches, interviews, and map and aerial photographs reviews. In addition, this section contains a general description of each facility within the installation as described through existing documentation or site visits.

3.2 INSTALLATION HISTORY AND MISSION

The Seneca Army Depot Activity, a military installation in upstate New York, was originally established as the Seneca Ordnance Depot (SOD) in July 1941. The facility originally covered about 10,600 acres of land in Seneca County. An airstrip from the former Sampson Air Force Base was acquired later. The North Depot Activity was consolidated with SOD in October 1961 and overall command was assumed by the Commanding Officer, SOD. In August 1963, SOD was transferred to the U.S. Army Supply and Maintenance Command from the Chief of Ordnance and renamed the Seneca Army Depot. The Seneca Army Depot was reassigned to the U.S. Army Materiel Development and Readiness Command (DARCOM), now the U.S. Army Materiel Command, on July 1, 1966. On September 1, 1976, the U.S. Army Depot Systems Command (DESCOM) was activated with command and control over all DARCOM depots. In 1993, significant downsizing in the military led to the renaming of the depot to the Seneca Army Depot Activity.

Employment of civilians reached a peak at 2,511 personnel in July 1943 and reached a pre-BRAC low of 595 in 1946. During the Korean conflict, 300 to 400 military personnel were assigned to the Seneca Army Depot, supplemented by 803 to 1,821 civilian personnel. In the

SECTIONTHREE

PROPERTY CHARACTERIZATION

1970s, civilian employment averaged about 700. As of September 30, 1995, the Seneca Army Depot Activity employed one military and 236 civilian personnel.

At this time, the Seneca Army Depot Activity encompasses 10,634 acres, and closure is the primary mission. Other missions concurrently being carried out include:

- Storage, issue, maintenance, and demilitarization of conventional munitions
- Storage and issue of general supplies, including hazardous materials
- Continental U.S. Care of Materials in Storage for U.S. Army Reserve Command
- Strategic and critical materials storage
- Logistics support and training assistance to the U.S. Army Reserve and National Guard units

The following organizations have been identified as presently being on-site tenant organizations:

- New York National Guard
- U.S. Coast Guard LORAN-C Transmitting Station
- Defense Finance and Accounting Service (closed May 1996)
- U.S. Army Test, Measurement, and Diagnostic Equipment Support Operations
- Defense Reutilization and Marketing Office, Romulus Branch
- U.S. Army Health Clinic
- Civilian Personnel Office (scheduled for shutdown September 1996)

3.3 **DESCRIPTION OF FACILITIES**

The Seneca Army Depot Activity has 927 structures, including 35 maintenance shops, a machine shop, and other types of facilities that relate to its overall infrastructure and specific missions. Infrastructure-related facilities include 139 miles of roads, 42 miles of railroad track, two sewage treatment plants, a water treatment plant, an uncontaminated trash incinerator, soldier support facilities, and an airfield with a 7,000-foot runway and refueling services of up to 43,300 gallons of jet petroleum grade 8 (JP8). Figure 3-1 presents the general layout of the Seneca Army Depot Activity.

SECTIONTHREE

PROPERTY CHARACTERIZATION

Recreation area at the lake

Soldier support facilities include:

•	Modern 450-person barracks	•	Athletic fields
	complex	•	PX/Commissary
•	180 sets of family quarters	•	PX gas station
•	Dining facility	•	Auto craft shop
•	Child care center	•	Ceramics shop
•	Education center	•	Woodshop
•	Gymnasium	•	Chapel
•	Racquetball courts	•	Theater
•	Bowling alley	•	Army travel camp

Facilities related to conventional munitions storage include:

- 519 earth-covered igloo magazines
- 8 standard magazines

Swimming pool

- 2 inert warehouses
- 2 small arms warehouses
- 3 modern maintenance facilities

Demilitarization facilities include:

- Ammunition Peculiar Equipment (APE) 1236 Deactivation Furnace equipped with EPA-approved, emission control system
- Modern, fully equipped facilities for performing disassembly demilitarization of conventional ammunition
- On-site demolition grounds for demilitarization of ammunition through controlled open detonation and burning

SECTIONTHREE

PROPERTY CHARACTERIZATION

General supply, hazardous materials, and industrial plant equipment (IPE) storage facilities include:

- 19 general purpose warehouses
- 6 humidity-controlled warehouses
- 1 conforming hazardous materials warehouse
- 6 improved outside storage sites
- 2 storage sheds

Facilities related to U.S. Army Reserve and National Guard training include:

- Small arms firing range
- Grenade range
- Bivouac site
- Tactical and engineer training areas
- Inspection, maintenance, and demilitarization facilities

Other on-site assets include:

- Machine shop
- Woodshop
- Air-assisted "airless" Chemical Agent Resistant Coating (CARC)-capable paint booth
- Test, Measurement, and Diagnostic Equipment (TMDE) calibration laboratory
- Prototype fabrication facility

3.3.1 Mission Related Activities

For the purposes of the EBS field survey and this report, the depot has been divided into six geographic areas.

- Main Depot Area
- North Depot and Special Weapons Area
- South Depot Area
- Airfield Area
- Lake Housing Area
- Coast Guard Area

These areas are based on those presented in a master plan developed for the depot in 1990 (STV/Lyon Associates 1990). These areas are related to functional history and land use at the depot and are used here to facilitate the ultimate goal of BRAC, which is efficient transfer and reuse. In the following sections, the different types of activities that occur within these areas are discussed, and various, less formally recognized, subareas are described. The main geographic areas and the subareas are depicted in Figure 3-1. The data appearing in the tables accompanying this section were derived from a real property inventory on file at the installation (Seneca Army Depot Activity 1995b).

Seventy-two areas at the installation are known solid waste management units (SWMUs). They have been previously classified in order of cleanup priority. These SWMUs have all been given numerical designations with the prefix SEAD- (e.g., SEAD-1, SEAD-2, etc.).

3.3.1.1 Main Depot Area

The Main Depot Area is the largest geographic area at the depot. This area includes facilities that are used for the storage of munitions and general purpose supplies, munitions disposal, industrial activities, administration/support, and training. Munitions and general purpose storage facilities cover approximately 6,681 acres of the Main Depot Area. The Seneca Army Depot Activity has been used for storage and disposal of military explosives since its inception in 1941. Prior to BRAC, its primary mission was the receipt, storage, maintenance, and supply of munitions. Another activity of importance has been the storage of general purpose materials and equipment. This activity has included the storage of both hazardous and non-hazardous materials. The majority of the facilities associated with this activity are concentrated in the Warehouse Subarea. In general, industrial activities at the depot have included restoration and renovation of munitions, IPE renovation, and mission support activities. Facilities related to

these activities are found throughout the Main Depot Area. Several facilities related to the administration/support of mission activities are found at various locations within the Main Depot Area. Finally, several areas of the Main Depot Area have been used for military training activities.

<u>Munitions Storage</u>. The principal area used for the storage of munitions is centrally located within the Main Depot Area. This area is also known as the Ammunition Storage Area or "Ammo" Area. Facilities in this area that are used for the storage of munitions are listed in Table 3-1.

A portion of the Main Depot Area known as the "50 Area" is located west of Seneca Road and south of Indian Creek Road. This undeveloped area was reportedly used for dumping and is discussed further in Sections Four and Five.

<u>General Purpose Storage Activities</u>. General purpose storage facilities are used for the storage of hazardous and non-hazardous materials, and the facilities relating to these activities are listed in Table 3-2.

Munitions Disposal. Several areas and facilities at the depot have been used for the demilitarization and disposal of munitions. Presently, munitions are the only hazardous material that is disposed of on site. The Open Burning/Open Demolition (OB/OD) Grounds, located in the northwest corner of the depot, is still in use for munitions disposal. This area includes three of the currently recognized SWMUs—SEAD-23, SEAD-45, and SEAD-57. A munitions deactivation furnace at Building 311 (SEAD-16) was used to destroy small arms munitions from 1945 to the mid-1960s. A second deactivation furnace at Building 367 (SEAD-17) has been used to destroy small arms, fuses, boosters, and other firing devices since 1962. Larger munitions, projectiles, and explosives cannot be destroyed in the furnace. They must be dismantled and the powder and/or propellant removed. These activities were conducted from 1948 to 1963 in Buildings 2073 to 2079, 2084, and 2085. This area is known as the Munitions Washout Plant (SEAD-4) and is currently dismantled. This activity is presently accomplished in Buildings 608 to 612 (SEAD-52). From the 1940s to the 1950s, powder was disposed of in the Powder Burning Pit (SEAD-24), located in the west-central part of the Main Depot Area, just south of Kendaia Creek. Information regarding munitions disposal facilities is presented in Table 3-3.

Industrial Operations. Industrial activities carried out at the Seneca Army Depot Activity have included the restoration of conventional and guided missile ammunition, munitions maintenance and demilitarization, and industrial plant equipment restoration. Typical operations include degreasing, spray painting, steam cleaning, alkaline washing, boiler plant maintenance, welding and soldering, filling and charging batteries, woodworking, machining, grinding, paint removal, lubricating and tuning vehicles, and preservative coating of metals (USATHMA 1980).

Effluents from these operations have included solvents, preservatives, grease, metal dusts (including lead- and cadmium-bearing silver solders), acids, alkalies, and propellant and explosive dusts. Effluent disposal operations have included distillation and reuses of solvents, burning sludges in the Open Burning Ground, running overflow from oil separators into the storm drain system, burning waste oil at the Open Burning Ground, discharging boiler plant blowdown onto the ground or into drainage ditches, disposing of spot cleaning and wiping rags in the incinerator, resale of waste oils by the Property Disposal Yard, burning of some flammable materials by the fire department for training purposes, and disposal of some used oil by burning in the depot oil burner (USATHMA 1980).

Steam cleaning facilities are equipped with oil/grease separators, and used solvents are disposed of off depot by a contractor. Self-contained degreasing units were installed after 1985, and all waste is disposed of by a contractor off site. Used motor oil was mixed with No. 6 fuel oil and burned in the three boiler houses (Buildings 120, 319, and 718) until the 1980s. After that time, Buildings 120 and 319 no longer burned the used motor oil mixture. However, Building 718 had one of its boilers retrofitted to burn used motor oil without mixing and continued to burn used motor oil until its removal from service in 1993. Presently, used motor oil is picked up by contract and disposed of off site. Table 3-4 lists the facilities used in munitions restoration activities.

Training Ranges. Approximately 900 acres of the Main Depot Area is used for military training of soldiers and National Guard troops. Historically, the depot has provided training support for all branches of the military and the National Guard. This principally involved annual training for National Guard personnel and reservists. As of July 31, 1996, all training activities at the depot were discontinued. Training ranges in the Main Depot Area were located in four different areas. These included the Duck Ponds Subarea, a marshy, wooded area with ponds in the northeastern corner of the depot; an open, undeveloped area north of Buildings 306 and 308; the wooded, undeveloped area between the southernmost row of storage igloos and the southern perimeter fenceline; and the area south of the OB/OD Grounds on both sides of the East-West Baseline Road. Live-fire training activities were confined to designated firing ranges and to the training area along the East-West Baseline Road. These areas are discussed further in Sections Four and Five. One structure, summarized in Table 3-7, is associated with training activities in the Main Depot Area.

3.3.1.2 North Depot and Special Weapons Areas

In 1956, the North Depot Activity was established with a special weapons mission. This mission was terminated in 1993 by Executive Order of the President. Areas associated with this mission are the North Depot and Special Weapons Areas. The North Depot Area contains facilities for maintenance activities (23 acres), industrial activities (1 acre), administration facilities (5 acres), troop housing (8 acres), community facilities (71 acres), outdoor recreation facilities (12 acres), and training ranges (30 acres). The facilities listed in Table 3-8 are located in this area.

Much of the details regarding the special weapons mission at the depot remains classified. Information regarding specific weapons and specific activities is not available. General information regarding which radioisotopes may be present in a particular building and which hazardous substances were used in a particular building is available. This information is presented in Table 3-10.

3.3.1.3 South Depot Area

The South Depot Area is the main administrative and support area for directing the operations of the entire depot. Facilities related to administration (30 acres), maintenance (15 acres), medical (3 acres), family housing (90 acres), community (71 acres), and outdoor recreation (12 acres) activities are located in this area. The family housing area at the South Depot is known as Elliot Acres. Table 3-11 lists the facilities located in the South Depot Area.

3.3.1.4 Airfield Area

The Airfield Area and directly related facilities cover an area of approximately 460 acres. Training ranges cover an additional 65 acres of the southwest corner of the Airfield Area. The Airfield Area was acquired by the U.S. Army in 1957. Since that time, it has been used for the loading and off-loading of transport planes and for housing helicopters that are used for surveillance of the installation. Transport planes were not cleared for landing unless it could be assured that they could be loaded or off-loaded and depart all in the same day. That is, the airfield was not used for long-term aircraft parking, nor was it used for aircraft maintenance. The main environmental concern at the airfield are the fueling areas, and these are shown on Figure 5-1. Aircraft were refueled from tanker trucks. During refueling, if fuel was determined to be of poor quality, it either remained in the tanker trucks or was off-loaded into 55-gallon drums. The fuel was then taken to the fire training area on the Main Depot and used for that activity. Two UH-1 helicopters used for security are stationed at the airfield and hangared in Building 2305. Building 2306 is used as an office for the USA Readiness Group on an as needed basis. Other than these functions, the airfield is not in use at this time. Table 3-12 lists the facilities found at the Airfield Area.

3.3.1.5 <u>Lake Housing Area</u>

The Lake Housing Area consists of a family housing area that covers 110 acres, community facilities covering 10 acres, and outdoor recreation areas that cover 155 acres. The Commanding Officer is quartered at the Lake Housing Area along Colonels Drive. Records indicate that this has also been known as Colonels Row. Table 3-13 lists the facilities found in the Lake Housing Area.

3.3.1.6 **Coast Guard Area**

A portion of the installation near the southeast corner is currently used by the U.S. Coast Guard (USCG). The USCG operates a LORAN-C transmitter at this site. Facilities involved with this mission include a single building (un-numbered), a UST, and the transmitter antenna tower.

3.3.2 **Tenant Missions**

In 1953 and 1954, the Seneca Army Depot Activity began storage of material for the General Services Administration (GSA). This included large uncovered storage piles of various ores (EPA, Region II et al. 1993). Presently, 20 strategic ore storage piles remain at the Seneca Army Depot Activity. These are stores of 19 commodities totaling 484,552 metric tons.

In 1978, a LORAN-C station was commissioned and made operational by the USCG. This transmitter is located in the Coast Guard Area and consists of a single building and associated UST. This area is located near the southeastern corner of the installation. The USCG transmits LORAN signals to the northeastern U.S. and the Great Lakes and monitors and controls transmissions using remote monitor sites (STV/Lyon Associates 1990; Seneca Army Depot Activity 1991).

The Defense Reutilization and Marketing Office (DRMO), Romulus "Type-II" Scrap Branch operates a holding area at the Seneca Army Depot Activity for property scheduled for disposal until it is transported to Griffis Air Force Base or sold as scrap (STV/Lyon Associates 1990). This facility is located in the Main Depot Area west of Building 160.

The U.S. Army Test, Measurement and Diagnostic Equipment Agency (USATA) maintains radiation calibration sources in Buildings 321 and 806 (SEAD-47).

The U.S. Army Health Clinic (MEDDAC) provides medical, and formerly dental, services to installation-authorized area personnel (STV/Lyon Associates 1990). The clinic is located in Building 106-A (SEAD-42).

The following tenants use mainly administrative type facilities: Civilian Personnel Office (CPO), Tobyhanna Army Depot; GSA Fleet Manager; and SOD Federal Credit Union.

3.4 FACILITY SUPPORT ACTIVITIES

3.4.1 Hazardous Materials/Waste Management

Hazardous waste management facilities at the Seneca Army Depot Activity presently consist of one drum storage area (Building 307, SEAD-1), one PCB-containing transformer storage area (Building 301, SEAD-2), an incinerator for the demilitarization of munitions (Building 367, SEAD-17), and a mixed waste storage area (Building 803, SEAD-22) (Seneca Army Depot Activity 1991). All of these facilities are RCRA TSD facilities operating under interim status.

Building 307 is a corrugated metal building with a curbed, concrete slab floor that is used to store materials in 55-gallon drums (SEAD-1). Drums are stored on wooden pallets and labeled by waste type. The building permit has a maximum capacity of 150 drums.

Building 301 is used for PCB-containing transformer storage (SEAD-2). When transformers are repaired or taken out of service, the fluid is tested for PCB content in this building. Materials stored here are awaiting testing or disposal. Fluids may be drained from equipment and placed in

55-gallon drums that are then stored in Building 307. The empty equipment is stored in Building 301. This building was empty at the time of the 1995 EBS site inspection.

An important part of the Seneca Army Depot Activity's mission is the demilitarization of explosives. Two deactivation furnaces have been used for the destruction of small arms ammunition. Building 311 was in use from 1945 until the mid-1960s (SEAD-16). This furnace operated without dust collectors. Building 367 is the location of the present APE-1236 deactivation furnace, which has dust collectors (SEAD-17). This facility has been in use since 1962. Larger munitions must be dismantled and the powder and/or propellant removed. Buildings 608 through 612 are the present locations of this activity (SEAD-52), which was formerly carried out at the ammunition workshops, Buildings 2074 through 2085. In this area, a dismantled washout plant had been located. This plant was operational between 1948 and 1963 and is one of the presently recognized SWMUs (SEAD-4). Ordnance detonation and burning activities have also been conducted at the Seneca Army Depot Activity; areas used for these purposes are also recognized SWMUs (SEADs 23, 45, and 57) (Engineering Science, Inc. 1994c; STV/Lyon Associates 1990). From the 1940s to the 1950s, powder was disposed of in the Powder Burning Pit (SEAD-24). These SWMUs are discussed further in Section 4.1.

Building 803 is used to store mixed wastes that are mainly wipes contaminated with several low-level radioactive components and F-listed solvents (SEAD-72). The materials are segregated by solvent type, double bagged, and stored in open top 55-gallon drums. The drums are stored in vaults with a maximum capacity of 24 drums per vault and 96 drums total for the building (Seneca Army Depot Activity 1991).

Approximately 4,010 acres at the Seneca Army Depot Activity are used for the storage of ammunition, special weapons, pyrotechnics, and munitions related items. A total of 455 storage igloos and eight standard magazines are located within the ammunition storage area; in addition, six warehouses are used to store ammunition. There are another 64 igloos in the exclusion area used for the storage of special weapons (STV/Lyon Associates 1990).

More than 470,000 gallons of various grades of fuel oil are stored throughout the depot. All ASTs are diked to contain any spill; and aprons have been constructed around the fill spouts of

all USTs. The depot maintains a current *Spill Control and Countermeasure Plan* (SPCCP) and an *Installation Spill Contingency Plan* (ISCP) (STV/Lyon Associates 1990).

Piles of chromate ore have been stored at several locations within the Seneca Army Depot Activity since the 1940s. Some piles are on the ground and others rest on concrete pads. Several piles of silicon carbide have been stored at the Seneca Army Depot Activity since 1956. These piles rest on hard storage pads and are covered with sheets of roofing material. Other ores that have been, or are presently, stockpiled at the Seneca Army Depot Activity include: antimony, asbestos, chromium, aluminum oxide, ferrochromium, ferro manganese, zinc, and rutile (Environmental Science and Engineering 1988b).

Columbite ore (a mixture of the oxides of iron, manganese, niobium, and tantalum) was stored in Buildings 324, 356, and 357 beginning in 1954 (SEAD-49). In 1973, the ore was transferred to Building 357 and Building 324 was swept. The ore was removed from the depot in 1993. The ore, now stored in drums, was originally kept in burlap bags. Neither niobium nor tantalum has any naturally occurring radioactive isotopes, but radium-226 and thorium-232 are usually present as impurities. Moreover, radon-222 was produced and concentrated in the unventilated warehouse, Building 357. A 1977 USAEHA survey indicated that the radon-222 concentration varied from 0.92 to 3.12 picocuries per liter (pCi/L) in Building 357. Outside the building, the concentration was 0.23 pCi/L. The maximum permissible concentration of radon-222 in an unrestricted area is 4.0 pCi/L (STV/Lyon Associates 1990). Warehouses that are known to have been used for the storage of hazardous materials are listed in Table 3-14.

Table 3-14
BUILDINGS USED TO STORE HAZARDOUS MATERIALS

BUILDING	HAZARDOUS MATERIALS
307	Hazardous waste
323	Pesticide, soda ash, and antifreeze
324	Columbite ore
327	Pesticide, soda ash, and antifreeze
330	Pesticide, soda ash, and antifreeze

Table 3-14 (Continued)

BUILDING	HAZARDOUS MATERIALS		
331	Pesticide, soda ash, and antifreeze		
333	STB, DS-2, and solvents		
336	STB and chlorine impregnate		
343	Pesticide, soda ash, and antifreeze		
356	DS-2 and columbite ore storage		
357	DS-2 and columbite ore storage		

Fibrous asbestos ore is currently stored in Tank Number 88 at the Tank Farm (SEADs 50 and 54). Asbestos, previously stored in some of the other tanks, was shipped to other GSA warehouses in the 1960s (USATHMA 1980). Other materials that are known to have been stored in the Tank Farm include antimony, rutile, and silicon carbide.

In the 1940s, 11 of the igloos (EO801-EO811) in the ammunition area were used for the storage of pitchblende ore. After the ore was removed, the igloos were used to store conventional munitions until 1976. Although there has been a remediation effort of this area, there is still outstanding concern about radiological contamination, and this area is one of the recognized SWMUs (SEAD-48) (Engineering Science, Inc. 1994c; STV/Lyon Associates 1990). This SWMU is discussed further in Section 4.1.

3.4.2 Solid Waste/Landfill Management

Solid waste is collected and transported by contract for disposal at an off-site, private landfill (USAMC 1994). Metal and other materials that have resale value are stored at the property disposal yard until enough materials accumulate to warrant a solicitation for bids. Waste oil is stored at this yard in two USTs, and it is also stored in USTs at Buildings 117 (SEAD-31), 188, and 732. Radiological waste was stored at the depot in the 1940s but this practice no longer occurs (STV/Lyon Associates 1990).

A large area of the Seneca Army Depot Activity that consists of a non-combustible landfill (SEAD-8), an incinerator cooling water pond (SEAD-3), an ash landfill (SEAD-6), refuse burning pits (SEAD-14), and a solid waste incinerator (SEAD-15) has been combined into a

single operable unit referred to as the Ash Landfill. Also located in the general vicinity is a disposal area west of Building 2203 (SEAD-64D). The non-combustible landfill was used from 1974 to 1979 to dispose of materials that were either non-combustible or too bulky to be incinerated or burned. The incinerator cooling water pond was used from 1974 to 1979 to hold the cooling water and fly ash generated from the scrubber of the solid waste incinerator. The fly ash was removed every 18 months and disposed of at the ash landfill. The ash landfill was used from 1941 to the late 1950s or early 1960s, and again from 1974 to 1979. Ash from the refuse burning pits was disposed of from 1941 until the late 1950s or early 1960s. The refuse burning pits were used from 1941 to 1974 to burn all wastes generated on the depot until the incinerator opened in 1974. After burning, metal was removed for recycling and the ash was pushed into the ash landfill. The solid waste incinerator was used from 1974 to 1979 to burn depot refuse. This Operable Unit is currently being investigated under a CERCLA RI/FS. These SWMUs are discussed further in Section 4.1.

The disposal area west of Building 2203 (SEAD-64D) was reportedly used for the dumping of crushed heavy gauge metal drums, empty smoke generating canisters, and various other metallic debris. Results of an expanded site investigation (ESI) conducted at this SWMU indicated that one large debris pile in the southwestern portion of this SWMU may have impacted the soils and groundwater locally. This SWMU is discussed further in Section 4.1 (Engineering Science, Inc. 1994c).

Nine of the other previously recognized SWMUs are associated with former solid waste disposal areas. SEAD-8 is a non-combustible landfill located to the south of Smith Farm Road. It was used for the burial of non-combustible and bulky items between 1974 and 1979. This site is presently closed and is being investigated as part of the Ash Landfill OU. SEAD-9 is a former construction debris landfill located near the intersection of the East Patrol Road and East Kendaia Road. This site was used for the disposal of construction debris from 1977 to 1984, for the disposal of scrapwood from 1984 to 1986, and for firewood storage from 1984 to 1994. This SWMU has been classified as a Moderately Low Priority Area of Concern (AOC) and a minirisk assessment has been recommended.

SEAD-11 is an old construction debris landfill that is located south of Indian Creek Road. This site was used for the disposal of construction debris from 1946 to 1949. This SWMU has been

classified as a Moderate Priority AOC and an RI/FS has been recommended. SEAD-59 is a fill area located to the west of Building 135. It was potentially used for the disposal of construction debris, and the dates of usage are not known. This SWMU has been classified as a Moderately Low Priority AOC and an RI/FS has been recommended.

SEAD-64 includes four separate garbage disposal areas that were possibly used when the installation solid waste incinerator was inoperable. This SWMU has been previously classified as a Low Priority AOC. SEAD-64A is a small landfill located in the Main Depot Area south of 7th Street. Investigations at this site by Engineering Science, Inc. revealed soil and groundwater contamination, and an RI/FS has been recommended. SEAD-64B is a landfill located near the south end of the Main Depot Area. Investigations by Engineering Science, Inc. indicate that minimal impacts to the soil, sediment, surface water, and groundwater have occurred at this site. It has been recommended that a minor risk assessment and a Completion Report be completed and finalized in a Record of Decision (ROD). SEAD-64C was a proposed landfill site located north of South Patrol Road that had been rumored to have been used for debris dumping. This site was investigated by Engineering Science, Inc., and no significant impacts to the media investigated were found. It has been recommended that a mini-risk assessment and a Completion Report be completed and finalized in an ROD. SEAD-64D is one large and two smaller debris piles, located west of Building 223 and east of West Patrol Road. This site was investigated by Engineering Science, Inc., and several localized impacts to soil and groundwater were found. An RI/FS has been recommended for this site.

SEAD-67 is a disposal area located east of Sewage Treatment Plant No. 4. This site was investigated by Engineering Science, Inc., and soil and sediment were found to have been significantly impacted. This SWMU is classified as a Low Priority AOC and a limited sampling program and a removal action have been recommended. SEAD-69 is a disposal area located southeast of Building 606. This site was investigated by Engineering Science, Inc., and no significant impacts to any of the media investigated were found. This SWMU is classified as a Moderately Low Priority AOC, and it has been recommended that a mini-risk assessment and a Completion Report be completed and finalized in an ROD. SEAD-70 is a fill area east of Building T-2110 that had been used to dispose of construction debris. An investigation of this site by Engineering Science, Inc. revealed that sediment in the surrounding wetland and the soils

which comprise the landfill material have been impacted by moderate releases of polyaromatic hydrocarbons (PAHs) (in the sediment) and arsenic (in the soil). This SWMU is classified as a Low Priority AOC, and it has been recommended that a mini-risk assessment and Completion Report be completed and finalized in an ROD.

SEAD-71 is a rumored paint and solvent disposal pit located west of Building 127. This site was investigated by Engineering Science, Inc., and, although a paint disposal pit was not confirmed, at least one pit with construction debris and contaminated soils was found. This SWMU is classified as a Low Priority AOC, and an RI/FS has been recommended.

3.4.3 Storage Tanks

The Seneca Army Depot Activity has 219 USTs or ASTs registered with the state of New York. A complete listing of these tanks, including their state registration numbers (SRN), capacities, year installed, and status as of August 1995, is provided in Appendix C.

3.4.4 Drinking Water Management

Water is supplied to the depot, as well as the towns of Varick and Romulus, by means of a treatment and pumping facility located at Building 2411. The water is drawn from Seneca Lake and is chlorinated and fluoridated at this plant. Treated water is then piped across the Main Depot to open Reservoir 334 at the South Depot. From the reservoir, the water is rechlorinated and pumped to elevated Water Tower 109. Water is sent from this tower to supply off-post users, Reservoir 352, and North Depot elevated Water Tower 730. The Airfield Area is supplied from an independent ground storage tank that is filled from Reservoir 334. A well near Building 2301 is also used for water supply on a daily basis (STV/Lyon Associates 1990).

The drinking water distribution system consists of various networks of mains that range in size from 6 to 12 inches in diameter. About half of the system is constructed of plastic polyvinyl chloride (PVC) piping, while the remainder is steel, asbestos cement, or ductile-iron piping (STV/Lyon Associates 1990).

A few water wells are located on the Seneca Army Depot Activity to supply water to remote facilities (Seneca Army Depot Activity 1991).

3.4.5 Groundwater Monitoring Wells

Over 100 groundwater monitoring wells are in place at the Seneca Army Depot Activity. Forty-seven of these are located at the Ash Landfill, 17 are located at the open detonation grounds, and 37 are associated with the open burning grounds (Engineering Science 1994a, 1994b, 1994c).

3.4.6 Stormwater Management

The storm drainage system consists of both open and closed systems that discharge into the four watersheds of Indian Creek, Kendaia Creek, Kendig Creek, and Reeder Creek. A system of extensive channels has been excavated, and drains have been built to facilitate surface drainage of most of the depot lands. All hazardous materials storage areas are located indoors to prevent precipitation from contacting the drums. The incinerator and waste processing area are also located indoors (STV/Lyon Associates 1990; Seneca Army Depot Activity 1991).

3.4.7 Sewage Treatment

The sanitary sewage disposal system comprises two major collection systems serving the depot and a combined system for the towns of Varick and Romulus. The South Depot and Warehouse Areas are served by a system that incorporates a pumping station at Building 314 (SEAD-22) and treatment at Building 4 (STP 4, SEAD-20). A New York Discharge Elimination System (NYDES) tertiary permit has been approved for STP 4. Treated sewage from this plant is discharged into Kendig Creek. The sanitary system for the Special Weapons and North Depot Areas is connected to a treatment plant at Building 715 (SEAD-21). Treated sewage is discharged from this plant into Reeder Creek, which is also covered by the NYDES permit (STV/Lyon Associates 1990; Seneca Army Depot Activity 1991).

A sanitary system that is connected to the Seneca County Sewer District serves the Lake Housing Area (except five residences to the north). Individual septic tanks serve all remaining buildings with sanitary facilities (Seneca Army Depot Activity 1991).

3.4.8 Electrical Power Generation

Electrical power is not generated at the Seneca Army Depot Activity. Electrical power is provided by the New York State Electric and Gas Corporation (NYSEG) through a substation off site that is jointly operated by NYSEG and the U.S. Army. NYSEG is designing an upgrade to this 1950s-age facility. A second substation is located at the North Depot and is of similar age, but no upgrading is planned (STV/Lyon Associates 1990).

3.4.9 Heating System

The majority of buildings, specifically the storage igloos and various warehouses, are unheated. Buildings that are heated use either central steam distribution systems or individual oil-fired systems. About 60 percent of the heated space is served by the central steam heating system. Approximately 66 buildings and 279 housing units are heated with individual systems (STV/Lyon Associates 1990).

3.4.10 Fire Training

Fire protection is afforded by a fully-equipped on-site fire department that is located in Building 103. Two areas have been identified as having been used for fire training exercises. Both are previously recognized SWMUs (SEADs 25 and 26) and will be discussed in Section 4.1 (STV/Lyon Associates 1990; Seneca Army Depot Activity 1991).

3.4.11 Medical Activities

Infectious and contaminated wastes generated by the health clinic are disposed of off depot by contractors in accordance with NYSDEC regulations (STV/Lyon Associates 1990). For a time, medical wastes were stored in appropriate biohazard containers in Building 106-A (SEAD-42).

3.4.12 On-Site Housing

Housing is provided at three on-post areas: Elliot Acres, Lake Housing, and the North Depot. Out of a total of 124 three-to-four bedroom units at Elliot Acres, 10 are single units, 13 are double units, and 22 are four-unit buildings. This housing area covers about 90 acres of real property. The Lake Housing Area includes 78 housing units covering about 110 acres, five community facilities covering about 10 acres, and about 155 acres of environmentally sensitive land that is used for outdoor recreation. Troop housing at the North Depot covers about 8 acres and includes 3 barracks that can accommodate 270 troops and a Bachelor Officers' Quarters accommodating 18 men (STV/Lyon Associates 1990). The North Depot housing was not in use at the time of the field investigation. Currently, the North Depot area is closed, and many of the housing units at Elliot Acres and Lake Housing are unoccupied.

3.5 SENSITIVE ENVIRONMENTS

The Seneca Army Depot Activity *BRAC 1995 Implementation Plan* (Headquarters, Seneca Army Depot Activity 1995) outlines the steps that need to be taken in order to address issues pertaining to sensitive environments. It addresses National Environmental Policy Act (NEPA), cultural resources, and natural resources requirements. Since the entire installation is an NPL site, NEPA compliance will most likely be fulfilled through an Environmental Assessment (EA) or a full Environmental Impact Statement (EIS). Headquarters, Industrial Operations Command is planning to prepare an EIS. The environmental action plan outlines a possible NEPA compliance scenario that includes the following steps:

- Conduct complete property inventory to determine disposal/reuse alternatives and differentiate those parcels that are in one of the following categories:
 - Totally clean and saleable
 - Require varying degrees of remediation
 - Where no closure-related accessing will occur

FINAL

SECTIONTHREE

PROPERTY CHARACTERIZATION

- Conduct a detailed building inspection
- Determine the level of cleanliness needed prior to transfer
- Perform property signoff

Cultural resources issues are required to be addressed because of NEPA, National Historic Preservation Act (NHPA), Archaeological Resources Protection Act (ARPA), Native American Graves Protection Act (NAGPRA), and American Indian Religions Freedom Act (AIRFA). To fulfill the mandates of these laws, the following actions are required:

- Create a cultural resources management plan
- Develop NHPA compliance programs, including Section 106 review
- Conduct historical/archival investigations
- Conduct a comprehensive archaeological survey/inventory
- Nominate eligible sites and/or districts
- Prepare and execute a Programmatic Agreement

Natural resources issues that need to be addressed at the Seneca Army Depot Activity include: the Endangered Species Act; wetlands; migratory birds; the resident deer herd; a forest inventory; unique ecosystems; and impact(s) on the local environment (Headquarters, Seneca Army Depot Activity 1995). The following include recommendations made in the BRAC 1995 Implementation Plan (Headquarters, Seneca Army Depot Activity 1995).

A formal survey for endangered or threatened species, both floral and faunal, has not been undertaken at the Seneca Army Depot Activity (Headquarters, Seneca Army Depot Activity 1995). However, no known federally-listed endangered or threatened species, designated endangered species, or critical habitats are known to occur in the Seneca Army Depot Activity area, although some species may occur as transients. A survey for endangered and threatened species is presently ongoing and is scheduled for completion in December 1996.

FINAL

SECTIONTHREE

PROPERTY CHARACTERIZATION

- A survey to define the wetlands at the Seneca Army Depot Activity has been completed and became available in July 1996. After the survey, issues that remain to be addressed include how wetlands will be managed, who will manage them, and whether all or portions should be retained at all after installation closure. The environmental action plan will need to address any potential conflicts affecting migratory bird populations that may frequent the Seneca Army Depot Activity's wetlands (Headquarters, Seneca Army Depot Activity 1995).
- A foreseeable impact to the environment could result if any area that is
 presently used by migratory birds is taken out of use. There is also a need for
 some yearly maintenance of waterfowl nesting areas. Before closure, any
 ensuing impacts to migratory bird habitats and waterfowl nesting areas should
 be reviewed with both NYSDEC and U.S. Fish and Wildlife (Headquarters,
 Seneca Army Depot Activity 1995).
- A resident herd of white-tailed deer is of particular interest owing to the high frequency of a genetic trait that produces a white-coat color. At this time, the herd consists of about 225 with the white-coat color and about 300 brown deer. The white-coat condition probably occurs at the Seneca Army Depot Activity at this frequency because of the fence enclosure that surrounds the installation. If there was no fence, the herd would outbreed and the white-coat frequency would decrease. The presence of the fence requires the continual management of the herd, which has been shown to expand beyond the limited carrying capacity of the installation (Headquarters, Seneca Army Depot Activity 1995).
- A large portion of the Seneca Army Depot Activity is wooded and the timber is salable. A timber inventory has recently been completed, and there is no plan at present for harvesting (Headquarters, Seneca Army Depot Activity 1995).

FINAL

SECTIONTHREE

PROPERTY CHARACTERIZATION

• No unique ecosystems are known to exist at the Seneca Army Depot Activity (Headquarters, Seneca Army Depot Activity 1995).

4.0 INVESTIGATION RESULTS

This section describes the results of the EBS investigation. It discusses:

- Sources of potential contamination that have been addressed in prior reports
- Sources of potential contamination that have not been addressed by previous investigations
- Adjacent properties that may be potential sources of contamination to the installation property
- Areas containing contamination substances not regulated by CERCLA (non-CERCLA)
- Real property within the installation property that will be retained by the U.S. Army (reserve enclaves)

4.1 PREVIOUSLY IDENTIFIED SOURCES OF POTENTIAL CONTAMINATION

Seventy-two sites were classified as SWMUs in the final *Solid Waste Management Classification Study* completed in 1994 (Engineering Science, Inc. 1994c). Identification and classification of SWMUs was conducted by the U.S. Army in accordance with the decision process outlined in the Interagency Agreement (IAG) between the USACE, EPA, Region II, and NYSDEC. Twenty-four sites have been classified as No Action required; 20 as requiring Removal Action or Completion Report/Record of Decision; and 28 as requiring an RI/FS, Remedial Action, and ROD. The 28 sites requiring an RI/FS are divided into thirteen groups and RIs are final at two of these. One site is the Ash Landfill site (SEADs 3, 6, 8, 14, and 15) where the source area was decontaminated using low temperature thermal desorption. Additional work may be needed for the groundwater. The second site is the Open Burning Ground (SEAD-23). The Ash Landfill FS is currently under debate over unresolved remedial alternatives. Four new groups of RIs are planned and it is likely that all of the remaining groups will require the full process (Headquarters, Seneca Army Depot Activity 1995). The 72 recognized SWMUs are listed according to relative priority in Tables 4-1a through 4-1e (following Section Four). The priorities were determined in accordance with the IAG.

Numerous spills of petroleum products or hazardous materials and several LUSTs have been reported to NYSDEC and are listed in Section 2.1.2. Most of these involved small quantities of material and were quickly cleaned up. A single spill involving a very large quantity of material occurred in 1988. A leak of 3,500 gallons of fuel oil from the heating plant, Building 718, entered the North Depot STP (Building 715). The oil was contained in the STP sludge holding tank and subsequently cleaned up. No violations were listed for this spill, which was inspected by several New York state environmental officials (STV/Lyon Associates 1990).

A release of 1,900 gallons of fuel oil from a LUST occurred at Building 138 on November 19, 1992 (Case Number 9209672). The oil drained from the tank into the storm drain, then into a drainage ditch, and then into Kendaia Creek. The total length of the release covered about one mile. The incident was reported to NYSDEC and cleanup actions followed. The case is listed as closed in the database; however, a closure report was unavailable. Furthermore, an interview conducted during the 1995 EBS field investigation revealed that only 1,700 gallons of the product was recovered. For the purposes of this EBS, we are considering this case open.

4.2 POTENTIAL CONTAMINATION AREAS IDENTIFIED DURING THE EBS INVESTIGATION

Extensive environmental assessments have previously been conducted at the Seneca Army Depot Activity and are summarized in the preceding section. Because of this extensive work, most of the potential areas of contamination have already been identified. The following table summarizes additional areas identified during the 1995 EBS interviews and visual inspections. The BRAC Parcel Number and Label presented in this table correspond with those described in Section Five and illustrated on Figure 5-1.

Table 4-2 POTENTIAL CONTAMINATION AREAS

GEOGRAPHIC AREA	FACILITY	DESCRIPTION	SOURCE	BRAC PARCEL NUMBER AND LABEL	
Coast Guard	LORAN-C	Halon spill			
Lake Housing	Building 2409	Raw sewage spill	Visual Inspection	54(6)HR(P)	
Airfield	Skeet/Trap Range	Skeet/Trap Range	Interview, Visual Inspection	115 Q-X	
Airfield	Building 2302	Small arms range	Visual Inspection, Interview	114 Q-X	
Main Depot	"50 Area"	Dumping areas	Visual Inspection, Interview	57(6)PS/PR/HR	
Main Depot	Near Ovid Road	Small arms range	Visual Inspection, Interview	119 Q-X	
Warehouse	Building 325	PCB oil spill	Interview	77(6)PR/HR	
South Depot	DRMO Yard	Release of hazardous materials	Interview	78(6)HS/HR	
South Depot	Buildings 306 and 308	Release of hazardous materials	Visual Inspection, Interview	84(6)PS/PR(P)	
South Depot	Building 127	UST with evidence of petroleum release	Visual Inspection	88(6)PS/PR	
South Depot	Building 135	Stained soil in vehicle storage building	Visual Inspection, Interview	86(6)PR/HS/HR	
Special Weapons	Buildings 813-817	Storage and release of paints and solvents, potential radionuclide release, unknown burial activities	Visual Inspection, Interview	98(6)PS/PR/HS/HR	
North Depot	MP Service Station	Multiple petroleum releases	Visual Inspection, Interviews	99(6)PS/PR	
North Depot	Building 744	Indoor firing range	Interview	125 Q-X	
North Depot	Buildings 716 and 717	Petroleum release	Visual Inspection	102(6)PS/PR(P)	
Main Depot	Near Building 2131	Possible DDT disposal	Interview	106(6)HR	
Airfield	Near Building 2311	Connex with unknown contents	Visual Inspection	107(7)	
Main Depot	South end of Main Depot Area	Munitions burial sites	Interview	116 Q-X 117 Q-X	
Main Depot	Duck ponds area	Mounds with unknown contents	Visual Inspection	111(7) 112(7)	
Special Weapons	Building 810	Unknown use and contents	Visual Inspection Denied	98(6)PS/PR/HS/HR	
Special Weapons	Buildings 819, A0101, and A0102	Unknown use and contents	Visual Inspection Denied	98(6)PS/PR/HS/HR	
North Depot	Building 747	Storage of acid and petroleum products, release of petroleum products and solvents	Interview	100(6)PS/PR/HS/HR	
North Depot	Undeveloped area west of Building 715	Mounds with a rusty drum	Visual Inspection	113(7)	
South Depot	Open Area	Rumored coal ash disposal area	Interview	137(7)	
South Depot	Open Area	Rumored coal storage area	Interview	138(7)	
North Depot	Open Area	Rumored DDT can burial area	Interview	139(7)	
North Depot	Hill north of Post 3	Rumored drum burial area	Interview	140(7)	

The U.S. Army has compiled a list of stories and rumors regarding past activities at the Seneca Army Depot Activity (Seneca Army Depot Activity 1995a). This list is informally referred to as

the "rumors list," and it contains 17 different entries. At the request of the BRAC Environmental Coordinator (BEC) and Geographic Project Manager (GPM), the Woodward-Clyde EBS investigation pursued these rumors during interviews involving current or past employees who may have knowledge of these past activities. After the interviews were completed, these rumors were analyzed in relation to any information that had been obtained. The original list of rumors is included as Appendix H. In summary, confirmation was found for eight of these rumors, no confirmation was found for five, and conflicting information was obtained for four. Subsequent visual inspections and confirmed locations led to the inclusion of fourteen of the rumors into the list of potential contamination areas listed in Table 4-2. Table 4-3 provides a breakdown of the results of the rumored sites investigation.

Table 4-3
RESULTS OF RUMOR INVESTIGATION

RUMOR NUMBER	INVESTIGATION RESULTS	BRAC PARCEL NUMBER AND LABEL	
1	Rumor confirmed: two ammunition burial areas identified	116Q-X and 117Q-X	
2	Rumor confirmed: fill materials included concrete, dirt, and shale	5(2)PS/HS	
3	Conflicting information obtained: area possibly investigated as part of SEAD-7	3(1) and/or 113(7)	
4	Conflicting information obtained: specific location not identified		
5	Conflicting information obtained: area is part of SEAD-67	103(6)HR	
6	Rumor confirmed: a potential location has been identified	38(7)	
7	Rumor confirmed: solvents, paints, and acids dumped/buried east of Building 813	98(6)PS/PR/HS/HR	
8	Rumor not confirmed: no interviewees had any direct knowledge of this activity; a potential location has been identified	140(7)	
9	Rumor not confirmed: no interviewees had any direct knowledge of this activity; a potential location has been identified	139(7)	
10	Aerial photographs revealed no evidence of a pond in the reported area	3(1)	
11	Rumor not confirmed: no interviewees had any direct knowledge of this activity; a potential location has been identified	109(7)	

Table 4-3 (Continued)

RUMOR NUMBER	INVESTIGATION RESULTS	BRAC PARCEL NUMBER AND LABEL
12	Rumor not confirmed: no interviewees had any direct knowledge of this activity; former staging area identified in aerial	57(6)
13	photograph Rumor confirmed regarding cleaning, but no indication of use of hazardous materials; no specific location identified	3(1)
14	Rumor confirmed: a potential location has been identified	137(7)
15	Rumor confirmed: visual inspection identified three areas where materials have been dumped	57(6)PS/PR/HR
16	Conflicting information obtained: interviews indicated that crushed shale was used for fill and that oils and solvents were disposed of in the area	78(6)HS/HR
17	Rumor confirmed: rumored area is part of No Action SWMU SEAD-51	3(1)

4.3 SOURCES OF POTENTIAL CONTAMINATION FROM ADJACENT OR SURROUNDING PROPERTY

The search of federal and state computerized databases revealed one site on the state priorities list (SPL), five RCRA generators within 0.25 mile to 1 mile from the Seneca Army Depot Activity, six LUSTs on the NYSDEC LUST database, and 14 sites with USTs registered on the NYSDEC Petroleum Bulk Storage UST database.

The site on the SPL is Sampson State Park, which is located adjacent to and southeast of the Seneca Army Depot Activity.

The five RCRA generators located near the Seneca Army Depot Activity are listed in Table 4-4. Their locations are shown on Figure 3-1 according to their corresponding map numbers.

Table 4-4 RCRA GENERATORS

	MAP NUMBER	
Town of Varick, New York	Generates 100 kilograms per month (kg/mo) but less than 1,000 kg/mo of non-acutely hazardous waste.	6
Northside of White Road	Generates 100 kg/mo but less than 1,000 kg/mo of non-acutely hazardous waste.	10
Sampson State Park	Generates at least 1,000 kg/mo of non-acutely hazardous waste.	5
Service Station, Route 96A, Ovid	Generates at least 1,000 kg/mo of non-acutely hazardous waste.	7
Ronnie's Body Shop, Route 96, Ovid	Generates 100 kg/mo but less than 1,000 kg/mo of non-acutely hazardous waste.	7

Table 4-5 lists the 14 LUSTs that have been reported to be located within a 4-mile radius of the Seneca Army Depot Activity.

Table 4-5
LEAKING UNDERGROUND STORAGE TANKS

NAME	DISCOVERY DATE	SUBSTANCE	STATUS	GROUNDWATER GRADIENT RELATIONSHIP	MAP NUMBER
George Clark Residence	9/17/93	Petroleum	Case Closed/Cleanup Complete	Upgradient	2
Split Pine Farms	3/27/87	Diesel	Case Closed/Cleanup Complete	Crossgradient	4

Seneca County Highway Department	11/13/87	Gasoline	Case Closed/Cleanup Complete	Upgradient	AP-1
Howard's Mobile	12/23/87	Gasoline	Case Closed/Cleanup Complete	Crossgradient	7
Sunoco Service Station	Unknown	Gasoline	Case Closed/Cleanup Complete	Crossgradient	7

Based on these records, it appears that no LUSTs with ongoing investigations are located upgradient from the Seneca Army Depot Activity.

A visual inspection of adjacent properties resulted in the identification of three areas of possible contamination that could potentially affect the Seneca Army Depot Activity.

- The first is the Seneca County Highway Department yard, located in the town of Romulus, approximately 0.25 miles northeast of the Main Gate to the Seneca Army Depot Activity (Figure 3-1, AP-1). This county facility appears to be a heavy equipment and maintenance yard and shop. The property is approximately two acres in size and contains several buildings, including a large previously used AST that has been modified to hold roadway salt. This facility lies directly hydraulically upgradient from the Seneca Army Depot Activity and should be environmentally characterized for the potential of soil and groundwater contamination. Visual inspections revealed numerous USTs and ASTs in various states of neglect and disrepair. This area was photographed for documentary purposes.
- The second suspect adjacent property is a large AST (approximately 15 feet in diameter and 50 feet high) located about 500 feet due west of the intersection of West Kendaia Road and the West Patrol Road (Figure 3-1, AP-2). This tank has a large hole in the side, and a large visible stain of petroleum product was observed around the base. This area is located hydraulically upgradient from the Lake Housing Area.
- The third area, also discovered during a visual inspection, consists of farm trash that has been dumped down the slopes of a branch of Kendaia Creek (Figure 3-1, AP-3). Materials observed in this area included household refuse, 5-gallon buckets, and construction debris. The size of the dumping area is about 500 feet square and it is located hydraulically upgradient from the Lake Housing Area.

4.4 NON-CERCLA RELATED ENVIRONMENTAL, HAZARD, AND SAFETY ISSUES

The following summarizes the results of the records review pertaining to non-CERCLA contamination substances as well as any documented hazard or safety issues.

4.4.1 Asbestos-Containing Material

The Seneca Army Depot Activity has an asbestos management program that includes building surveys for asbestos in buildings and removal actions. Approximately 50 percent of the asbestos identified in the original surveys at the Seneca Army Depot Activity has been removed. Update/follow-up inspections of buildings that were not mothballed were scheduled to be performed at the end of fiscal year 1995. Results from these inspections were not available for this report as of December 1995.

4.4.1.1 Sources of Information

Information concerning the potential presence of asbestos in buildings on the site was available from the *Asbestos Management Plan Report* (Seneca Army Depot Activity *Asbestos Management Plan*), which summarized results from:

- 1. A 1988 survey of ACM in 144 buildings at the Seneca Army Depot Activity by Galson & Galson (the original report was also available [Galson & Galson 1988]);
- 2. A 1991 survey of 31 additional buildings by the Campbell Design Group;
- 3. As needed inspections of 180 housing units at the Seneca Army Depot Activity by depot personnel; and
- 4. Asbestos removal efforts at the Seneca Army Depot Activity.

4.4.1.2 **Designation of Buildings**

Designation of buildings at the Seneca Army Depot Activity was based on reported identification and/or removal of asbestos. If ACM was present but not fully remediated, the building was designated "A." If asbestos was never present or was identified and fully remediated, then the building was considered to be asbestos free and no designation was given. When asbestos was suspect (based on inspection or on construction dates before 1985) and no remediation was

performed, the building was designated "A(P)" for possible presence of asbestos. An asbestos abatement contract has been written, but had not been released at the time of the 1995 EBS.

It was not always possible to determine from statements in the *Asbestos Management Plan* whether full or partial remediation of asbestos had occurred in a building. Therefore, full remediation was assumed only when the *Asbestos Management Plan* (Seneca Army Depot Activity *Asbestos Management Plan*) stated "all identified asbestos-containing material (ACM) removed" for non-housing units and "all floor covering removed" for family housing units in Elliot Acres (the *Asbestos Management Plan* reported that only the floor covering in Elliot Acres contained asbestos); in other cases, partial remediation was assumed and the building was designated "A" for presence of asbestos.

4.4.1.3 Results

Information regarding the asbestos status for each building at the Seneca Army Depot Activity is presented in Appendix G. Of 457 buildings, asbestos is present and not fully remediated in 197 buildings (designated "A") and is possible (either suspected in the survey or not surveyed and constructed prior to 1985) and not remediated in 54 buildings (designated "A(P)"). The total area for buildings designated "A" and "A(P)" is 73.11 acres. Asbestos was known to be absent (either never present or present and fully remediated) in 205 buildings (no designation).

There are no asbestos-containing building materials in the 519 ammunition igloos.

4.4.2 Lead-Based Paint

The Seneca Army Depot Activity *BRAC 1995 Implementation Plan* (Headquarters, Seneca Army Depot Activity 1995) indicates that all housing units in Elliot Acres, Lake Housing, and "Colonels Row" will be inspected for LBP and that inspections of other buildings and structures will be performed at the depot's suggestion. However, no information on the status of LBP on buildings at the Seneca Army Depot Activity was available. Instead, potential for LBP was evaluated based on construction dates for buildings obtained from the Inventory of Military Real Property database (Seneca Army Depot Activity 1995b).

4.4.2.1 <u>Designation of Buildings</u>

Painted buildings constructed prior to 1978 were designated "L(P)" for potential LBP, whereas buildings constructed in or after 1977 were considered not to contain LBP and received no designation. LBP status was designated as "L(P)" for potential LBP in buildings with unknown construction dates.

4.4.2.2 Results

Information regarding LBP status for each building at the Seneca Army Depot Activity is presented in Appendix G. Of 456 buildings, LBP is possible in 365 buildings constructed before 1978 and for 4 buildings with unknown construction dates, and is presumed absent in 86 buildings constructed after 1977. The total area for buildings designated "L(P)" is 82.17 acres.

The 519 ammunition igloos were never painted and, therefore, do not constitute an LBP hazard.

4.4.3 Polychlorinated Biphenyls

The Seneca Army Depot Activity has a program for disposing of electrical equipment containing PCBs. Building 301, located in the Main Depot Area along Fayette Road, is the PCB Transformer Storage Facility. Decommissioned transformer units and other suspected PCB-contaminated electrical equipment are delivered to Building 301 by linemen. Sampling is conducted by the environmental coordinator to determine the concentrations of PCBs in the units and contaminated electrical equipment. The items are then disposed of by the DRMO. Transformers are stored in Building 301 for a maximum of seven months prior to disposal. It is not known to what extent the seven months policy was followed historically. This facility is a RCRA storage facility that will require closure.

There is no evidence of PCB releases from Building 301 based on regular inspections by the Seneca Army Depot Activity environmental coordinator. In addition, PCBs in soil samples in the vicinity of Building 301 were less than 1.0 milligrams per kilogram (mg/kg) and thus were below the regulatory limits established in EPA's PCB Spill Cleanup Policy (40 CFR 761). Therefore, Building 301 is not CERCLA regulated, but is qualified with a "P" for storage of equipment with

4.4.2.1 <u>Designation of Buildings</u>

Painted buildings constructed prior to 1978 were designated "L(P)" for potential LBP, whereas buildings constructed in or after 1977 were considered not to contain LBP and received no designation. LBP status was designated as "L(P)" for potential LBP in buildings with unknown construction dates.

4.4.2.2 Results

Information regarding LBP status for each building at the Seneca Army Depot Activity is presented in Appendix G. Of 456 buildings, LBP is possible in 365 buildings constructed before 1978 and for 4 buildings with unknown construction dates, and is presumed absent in 86 buildings constructed after 1977. The total area for buildings designated "L(P)" is 82.17 acres.

The 519 ammunition igloos were never painted and, therefore, do not constitute an LBP hazard.

4.4.3 Polychlorinated Biphenyls

The Seneca Army Depot Activity has a program for disposing of electrical equipment containing PCBs. Building 301, located in the Main Depot Area along Fayette Road, is the PCB Transformer Storage Facility. Decommissioned transformer units and other suspected PCB-contaminated electrical equipment are delivered to Building 301 by linemen. Sampling is conducted by the environmental coordinator to determine the concentrations of PCBs in the units and contaminated electrical equipment. The items are then disposed of by the DRMO. Transformers are stored in Building 301 for a maximum of seven months prior to disposal. It is not known to what extent the seven months policy was followed historically. This facility is a RCRA storage facility that will require closure.

There is no evidence of PCB releases from Building 301 based on regular inspections by the Seneca Army Depot Activity environmental coordinator. In addition, PCBs in soil samples in the vicinity of Building 301 were less than 1.0 milligrams per kilogram (mg/kg) and thus were below the regulatory limits established in EPA's PCB Spill Cleanup Policy (40 CFR 761). Therefore, Building 301 is not CERCLA regulated, but is qualified with a "P" for storage of equipment with

greater than 50 parts per million (ppm) PCBs in the absence of evidence of a PCB release. The area for Building 301 is 824 square feet. The qualified area for this parcel is 0.02 acres.

4.4.4 Radon

The Seneca Army Depot Activity *BRAC 1995 Implementation Plan* (Headquarters, Seneca Army Depot Activity 1995) states that all Class 1 and Class 2 structures (structures that have 24-hour occupancy, living quarters, or day care or children occupancy) were tested for radon and that testing of Class 3 structures (buildings with less than continual occupancy and warehouses) was due to be completed in 1995. Radon results from surveys of 303 buildings were available from the Seneca Army Depot Activity files (Seneca Army Depot Activity Radon Survey Results). Retesting of buildings exceeding mitigation levels was completed in May 1996.

4.4.4.1 <u>Designation of Buildings</u>

Buildings with radon levels of 4.0 pCi/L or greater were designated "R," while those with radon less than 4.0 pCi/L were below EPA recommended mitigation levels and received no designation. It should be noted that any buildings that were not tested did not receive any designation.

4.4.4.2 Results

Information regarding radon status for 303 buildings at the Seneca Army Depot Activity is presented in Appendix G. Retesting of these buildings in May 1996 revealed that only two remained above 4.0 pCi/L. The total area for these two buildings is 0.38 acres.

4.4.5 Unexploded Ordnance

Information on the potential presence of UXO at the Seneca Army Depot Activity was available from the following sources:

- 1. The *Solid Waste Management Classification Study* (Engineering Science, Inc. 1994c), which was used to identify buildings or areas in SWMUs potentially containing UXO;
- 2. The IRMP database, which was used to identify potential UXO based on names of buildings and areas; and

3. On-site interviews and visual inspections.

4.4.5.1 Designation of Buildings

Buildings and areas where UXO was stored or disposed are designated "X." Buildings possibly containing UXO stored for use or disposal and areas containing possible surface or buried UXO based on previous testing, dismantling, or deactivation of UXO were designated "X(P)."

4.4.5.2 Results

The UXO status for each building or area at the Seneca Army Depot Activity is presented in Appendix G. Forty-two buildings, ten areas, and all 519 igloos were also designated "X(P)" for possible UXO stored for use or disposal. The total area is 1,303.24 acres.

4.4.6 Radionuclides

The Seneca Army Depot Activity currently stores radioactive material (radiation calibration sources) in Buildings 321 and 806 and mixed waste in Building 803 (Engineering Science, Inc. 1994c). Building 803 is presently empty. A single row of eleven storage igloos was used to store pitchblende ore (Parcel 49(5)HS/HR). This area is one of the currently recognized SWMUs (SEAD-48) and it covers about 72.79 acres. Each of these igloos and the surrounding area of land have been qualified for radionuclides. Three parcels in the North Depot Area have also been qualified for radionuclides. They correspond with BRAC Parcels 53(5)HR, 98(6)PS/HS/HR, and 103(6)HR.

A decommissioning survey was performed in 1992 and 1993 on 64 Special Weapons Area ammunition igloos (A0101, A0102, A0201 to A0218, A0301 to A0317, A0401 to A0409, A0501 to A0508, and A0601 to A0610) to confirm that the igloos have no radiation contamination and could be released for unrestricted use (Radiological Assistance Team, Seneca Army Depot Activity 1993). This survey was conducted because these igloos have been used for the storage of special weapons. No fixed or removable radiological contamination was found at the surveyed sites that exceeded regulatory guidelines and requirements. At the request of the Seneca Army Depot Activity, these igloos will be qualified for radionuclides. Also at the installation's request, another 96 storage igloos located in the munitions storage area will be qualified for radionuclides. These

are listed in Appendix G and Table 5-4. These buildings and four areas were qualified for radionuclides. The total area of buildings and parcels designated "RD" is 438.00 acres.

4.4.7 Pesticides, Herbicides, and Fungicide Usage

The Seneca Army Depot Activity has a herbicide/pesticide management program (Absolom 1994; Seneca Army Depot Activity 1994b). Herbicides and pesticides are stored for use at the Seneca Army Depot Activity in Building 606 (Parcel 74(6)PS/HS/HR). The area of Building 606 is 3,414 square feet. No qualified designation was given to non-CERCLA herbicide/pesticide areas at the Seneca Army Depot Activity (in this case, Building 606).

4.5 RESERVE ENCLAVES

Even though some areas have been identified in the *BRAC 1995 Implementation Plan* (Headquarters, Seneca Army Depot Activity 1995) as being likely to be retained by DOD, all areas within the Seneca Army Depot Activity cantonment were investigated for this EBS. Areas that have been identified as being likely to be retained include: six warehouses for future storage of hazardous materials (Buildings 339, 347, 348, 350, 356, and 357); 20 strategic materials ore storage piles; a single administrative building (Building 103); and 36 areas of known environmental contamination.

Note:

Low Priority AOCs are SWMUs for which there is evidence or suspicion of waste disposal, but for which the types and/or the exact locations of the wastes have not necessarily been established, and for which further investigation is a low priority.

5.0 ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

This section presents the parcelization of the BRAC property in accordance with the criteria described in the CERFA guidance and the DOD *BCP Guidebook* (DOD 1993).

5.1 PARCEL DESIGNATIONS

Based on a review of installation documents; federal, state, and local records; and a site visit including employee interviews and visual inspections of the property and facilities, Woodward-Clyde divided the Seneca Army Depot Activity installation into BRAC parcels that represent the environmental condition of the property area. The BRAC parcels and corresponding categorizations are identified in Table 5-1a (following Section Five) and on the CERFA map, Figure 5-1. Areas containing non-CERCLA contamination substances are identified and delineated separately as qualified parcels and are presented in Table 5-1b (following Section Five). Qualified parcels overlay all environmental condition of the property categories (Categories 1 through 7). Parcels are labeled as described in Section 1.3. A 25-acre grid coordinate system is overlaid on the CERFA map to facilitate the parcelization discussion by geographically locating the various parcels.

Parcel boundaries are drawn using the best available information on the extent of contamination and do not follow map grid lines. Small point sources of contamination or storage, such as USTs, were delineated by circular 0.25-acre parcels centered on the source, as stipulated in DOD guidance. For consistency and to facilitate the summation of acreages, parcel acreages were calculated to two decimal places using the digitized map (Figure 5-1) and AutoCad Release 12. This method is not meant to imply an accuracy to one one-hundredth of an acre.

5.1.1 Category 1 Parcels

Woodward-Clyde's survey and subsequent parcelization of the Seneca Army Depot Activity identified four parcels, approximately 8,555 acres, as Category 1 parcels. The Category 1 parcels and locations on Figure 5-1 are described in the following sections.

BRAC Parcel Number and Label 1(1)

CERFA Map Location 18,6

This parcel is associated with most of the Lake Housing Area, with the exclusion of the housing area itself. This parcel consists of the area between the housing and the highway. The housing area is excluded from this parcel and placed in Parcel 5(2) because it is associated with petroleum storage activities. The parcel is designated as a Category 1 parcel because there has been no documented storage of hazardous substances or petroleum products; nor is there evidence of release, disposal, or migration from an adjacent property of hazardous substances or petroleum products within the identified area.

BRAC Parcel Number and Label 2(1)

CERFA Map Location 26,10

This parcel is associated with most of the Airfield Area, with the exclusion of those areas that are otherwise identified. The parcel is designated as a Category 1 parcel because there has been no documented storage of hazardous substances or petroleum products; nor is there evidence of release, disposal, or migration from an adjacent property of hazardous substances or petroleum products within the identified area.

BRAC Parcel Number and Label 3(1)

CERFA Map Location 16,15

This parcel is associated with most of the Main Depot, South Depot, Coast Guard, and North Depot Areas, with the exclusion of those areas that are otherwise identified. The parcel is designated as a Category 1 parcel because there has been no documented storage of hazardous substances or petroleum products; nor is there evidence of release, disposal, or migration from an adjacent property of hazardous substances or petroleum products within the identified area.

BRAC Parcel Number and Label 4(1)

CERFA Map Location 19,24

This parcel is associated with the small area within the Elliot Acres Housing Area. The parcel is designated as a Category 1 parcel because there has been no documented storage of hazardous

substances or petroleum products; nor is there evidence of release, disposal, or migration from an adjacent property of hazardous substances or petroleum products within the identified area.

5.1.2 Category 2 Parcels

Of the 10,634 acres that comprise the Seneca Army Depot Activity BRAC property, 30 parcels, approximately 111 acres, were designated as Category 2. The Category 2 parcels are identified on Figure 5-1 and summarized in the following sections.

BRAC Parcel Number and Label 5(2)PS/HS CERFA Map Location 17,2

This parcel is associated with 26 petroleum USTs and 34 ASTs located at the Lake Housing Area (Buildings 2401 to 2422, 2423 to 2439, 2441, 2443 to 2451, 2453 to 2456, 2466, 2470 to 2502, 2504 to 2505, 2507, 2508, 2510 to 2521, 2523 to 2524) and hazardous storage at Building 2456. Table 5-2 summarizes the USTs and ASTs associated with this parcel.

Table 5-2
USTs and ASTs ASSOCIATED WITH
BRAC PARCEL NUMBER AND LABEL 5(2)PS/HR

TANK SIZE AND TYPE	STATE REGISTRATION NUMBER	STATUS
550-gallon fuel oil USTs	141 to 144, 146 to 156, 158 to 164, and 166	In service since 1942
275-gallon fuel oil ASTs	3, 14, 22, 27, 54, 60, 63, 67, 173, 186, 189, 191 to 193, 199, 204 to 209, and 216 to 224	In service since 1988
1,000-gallon fuel oil UST	71	In service since 1981
Two 275-gallon fuel oil ASTs	72	In service since 1942
2,000-gallon fuel oil AST	73	In service since 1992
Two 275-gallon fuel oil ASTs	145	In service since 1991
500-gallon fuel oil UST	157	In service since 1986
550-gallon gasoline AST	174	In service since 1991
1,500-gallon fuel oil UST	184	Closed in place with NYSDEC approval

There have been no documented releases associated with these USTs or ASTs. Building 2456 is a boat house that is used for the storage of paints and solvents. A visual inspection during the

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

1995 EBS did not uncover any evidence of a release nor is there any record of a release associated with this building. This parcel is designated as Category 2.

BRAC Parcel Number and Label 7(2)PS

CERFA Map Location 28,10

This parcel is associated with a UST located at Building 2306. This UST (SRN 70) is used to store 1,000 gallons of fuel oil and has been in service since 1957. A visual inspection of the area did not reveal any evidence of contamination or release, and there is no record of any release. This parcel is designated as Category 2.

BRAC Parcel Number and Label 9(2)HS(P)

CERFA Map Location 30,23

This parcel is associated with a rumored acid storage site and is located near the southern end of the Main Depot Area. An interview confirmed that this area had been the location of an acid storage shed. A visual inspection of the area revealed the presence of a depression that the escort reported as being near the location of the acid storage shed. The escort also claimed that the structure itself had been moved. The shed was described as being a self-contained metal unit. and there is no record or evidence that there had ever been a release. This parcel is designated as Category 2.

BRAC Parcel Number and Label 10(2)PS

CERFA Map Location 28,26

This parcel is associated with a petroleum AST located at the LORAN-C facility (SRN 215). This AST is used to store 6,000 gallons of fuel oil. There has been no documented release associated with the AST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 11(2)HS

CERFA Map Location 24,22

This parcel is associated with Building 327, a warehouse. Visual inspections and interviews conducted during the 1995 EBS indicated that pesticides, soda ash, and antifreeze have been

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

stored in this building. There have been no documented releases associated with this building. This parcel is designated as Category 2.

BRAC Parcel Number and Label 12(2)HS

CERFA Map Location 24,22

This parcel is associated with Building 326, a warehouse. A visual inspection conducted during the 1995 EBS indicated that super topical bleach (STB) and chlorine impregnate are stored in this building. There have been no documented releases associated with this building. This parcel is designated as Category 2.

BRAC Parcel Number and Label 15(2)HS

CERFA Map Location 22,22

This parcel is associated with Building 324, a warehouse. Records indicated that columbite ore had been stored in this building from 1954 to 1974. A radionuclide survey of this building was previously conducted and no evidence of contamination was detected. There have been no documented releases associated with this building. This parcel is designated as Category 2.

BRAC Parcel Number and Label 16(2)HS

CERFA Map Location 22,23

This parcel is associated with Building 343, a warehouse. Visual inspections and interviews conducted during the 1995 EBS indicated that pesticides, soda ash, and antifreeze have been stored in this building. There have been no documented releases associated with this building. This parcel is designated as Category 2.

BRAC Parcel Number and Label 18(2)HS

CERFA Map Location 21,22

This parcel is associated with Building 333, a warehouse. Visual inspections and interviews conducted during the 1995 EBS indicated that solvents, STB, and diethylenetriamine (DS-2) have been stored in this building. There have been no documented releases associated with this building. This parcel is designated as Category 2.

BRAC Parcel Number and Label 20(2)PS/HS

CERFA Map Location 21,21

This parcel contains Buildings 316, 317, 318, and 372, ordnance repair warehouses, and shops. Records and interviews indicated that solvents and petroleum products have been stored in these buildings. There has been no documented release associated with these buildings. This parcel is designated as Category 2.

BRAC Parcel Number and Label 21(2)PS

CERFA Map Location 20,23

This parcel is associated with 63 petroleum USTs and 5 ASTs located at the Elliot Acres Family Housing Area (Buildings 200 to 219 and 221 to 245). Sixty-one tanks (SRNs 74 to 81, 86 to 87, 89, 91 to 124, 126 to 134, 136 to 140, and 200 to 201) are 550-gallon fuel oil USTs. Two (SRNs 125 and 135) are 1,000-gallon fuel oil USTs. Four tanks (SRNs 82 to 85) are 275-gallon fuel oil ASTs. One (SRN 90) is a 500-gallon fuel oil AST. Installation dates of these tanks range from 1942 to 1992. There have been no documented releases associated with any of these USTs or ASTs. This parcel is designated as Category 2.

BRAC Parcel Number and Label 22(2)PS

CERFA Map Location 19,23

This parcel is associated with a petroleum UST located at Building 101 (SRN 6). This UST is used to store 3,000 gallons of fuel oil and has been in service since 1942. There has been no documented release associated with this UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 23(2)PS

CERFA Map Location 18,23

This parcel is associated with a petroleum UST located at Building 103 (SRN 1). This UST is used to store 2,500 gallons of fuel oil and has been in service since 1988. There has been no documented release associated with this UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 25(2)PS/HS

CERFA Map Location 19,23

This parcel is associated with Building 117. This facility is a heavy equipment shop that has been used for battery maintenance and storage. Antifreeze and battery acid have been stored in this building. A waste oil UST (SRN 25) is associated with this building. This UST is used to store 2,005 gallons of waste oil. This UST is still in use and is one of the presently recognized SWMUs (SEAD-31). It has been previously classified as a No Action SWMU under CERCLA. There have been no documented releases associated with the building or UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 26(2)HS

CERFA Map Location 19,22

This parcel is associated with Building 125, a former paint shop. This building was used to store paints and solvents. There has been no documented release associated with this building. This parcel is designated as Category 2.

BRAC Parcel Number and Label 27(2)PS/HS

CERFA Map Location 18,23

This parcel is associated with a preventive medicine laboratory and a petroleum UST located at Building 106A (SRN 9). Medical waste materials have been stored in this facility in appropriate biohazard containers. This UST is used to store 5,000 gallons of fuel oil. There has been no documented releases associated with this UST or the medical wastes. This parcel is designated as Category 2.

BRAC Parcel Number and Label 28(2)HS

CERFA Map Location 18,22

This parcel is associated with two USTs located at Building 114. These USTs (SRNs 12 and 13) are used to store 1,000 gallons each of fuel oil, and both have been in service since 1943. A visual inspection of the area did not reveal any evidence of contamination or release, and there is no record of any release. This parcel is designated as Category 2.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 30(2)PS

CERFA Map Location 18,21

This parcel is associated with a petroleum UST located at Building 113 (SRN 11). This AST is used to store 2,000 gallons of fuel oil. There has been no documented release associated with this UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 31(2)PS/HS

CERFA Map Location 20,21

This parcel contains Building 312, an inflammable materials storage warehouse. Records and interviews indicated that solvents, paints, antifreeze, hydrofluorosilic acid, and petroleum products have been stored in this building. There has been no documented release associated with this building. This parcel is designated as Category 2.

BRAC Parcel Number and Label 32(2)PS

CERFA Map Location 2,15

This parcel is associated with a petroleum UST located at Building 800 (SRN 45). This UST is used to store 1,500 gallons of fuel oil and has been in service since 1981. There has been no documented release associated with this UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 33(2)PS

CERFA Map Location 2,15

This parcel is associated with a petroleum UST located at Building 729 (SRN 39). This UST is used to store 2,000 gallons of fuel oil and has been in service since 1986. There has been no documented release associated with this UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 34(2)PS

CERFA Map Location 3,3

This parcel is associated with Buildings 719, 720, and 721, and two USTs. These three buildings were associated with petroleum storage, a fueling station, and a maintenance shop. A visual inspection did not reveal any evidence of staining or leaking of petroleum product. Building 719

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

is a pump house for a 15,000-gallon gasoline UST (SRN 172). This UST has been in service since 1985. Building 720 is a motor vehicle shop. Building 721 is a military police maintenance and office building, which is served by a 12,000-gallon diesel UST (SRN 202) located north of the building. This UST has been in service since 1986. There have been no documented releases associated with these USTs or buildings. This parcel is designated as Category 2.

BRAC Parcel Number and Label 35(2)PS

CERFA Map Location 2,2

This parcel is associated with a petroleum UST located at Building 733 (SRN 40). This UST is used to store 1,000 gallons of fuel oil and has been in service since 1971. There has been no documented release associated with this UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 36(2)PS

CERFA Map Location 3,14

This parcel is associated with a petroleum UST located at Building 746 (SRN 43). This UST is used to store 3,000 gallons of fuel oil and has been in service since 1982. There has been no documented release associated with this UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 38(2)PS

CERFA Map Location 2,12

This parcel and area of real property is associated with two petroleum USTs located at Building 742 (SRNs 210 and 211). These USTs were used to store 3,000 gallons of gasoline each. They have been in service since 1990 but were both temporarily out of service at the time of the 1995 EBS investigation. There has been no documented release associated with these USTs. This parcel is designated as Category 2.

BRAC Parcel Number and Label 39(2)PS

CERFA Map Location 2,12

This parcel is associated with a petroleum UST located at Building 714 (SRN 37). This UST is used to store 1,000 gallons of fuel oil and has been in service since 1957. There has been no documented release associated with this UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 40(2)PS

CERFA Map Location 2,12

This parcel is associated with a petroleum UST located at Building 740 (SRN 42). This UST is used to store 1,000 gallons of fuel oil and has been in service since 1960. There has been no documented release associated with this UST. This parcel is designated as Category 2.

BRAC Parcel Number and Label 41(2)HS

CERFA Map Location 14,9

This parcel is associated with an acid storage area south of the truck gate. This area corresponds to one of the previously recognized SWMUs (SEAD-65A). No evidence of release has been observed, and pH testing by Engineering Science, Inc. of the soils in this area did not find pH values outside of the normal range for soils. This SWMU has been previously classified as a No Action SWMU under CERCLA. This parcel is designated as Category 2.

BRAC Parcel Number and Label 42(2)HS

CERFA Map Location 14,9

This parcel is associated with an acid storage area south of the truck gate. This area corresponds to one of the previously recognized SWMUs (SEAD-65B). No evidence of release has been observed, and pH testing by Engineering Science, Inc. of the soils in this area did not find pH values outside of the normal range for soils. This SWMU has been classified as a No Action SWMU under CERCLA. This parcel is designated as Category 2.

BRAC Parcel Number and Label 43(2)HS

CERFA Map Location 14,9

This parcel is associated with an acid storage area south of the truck gate. This area corresponds to one of the previously recognized SWMUs (SEAD-65C). No evidence of release has been observed, and pH testing by Engineering Science, Inc. of the soils in this area did not find pH values outside of the normal range for soils. This SWMU has been classified as a No Action SWMU under CERCLA. This parcel is designated as Category 2.

5.1.3 Category 3 Parcels

Of the 10,634 acres that comprise the Seneca Army Depot Activity BRAC property, ten parcels, approximately 21 acres, were designated as Category 3. The Category 3 parcels are identified on Figure 5-1 and are summarized in the following sections.

BRAC Parcel Number and Label 13(3)HS/HR

CERFA Map Location 23,22

This parcel is associated with Building 330, a warehouse. Visual inspections and interviews conducted during the 1995 EBS indicated that pesticides, soda ash, and antifreeze have been stored in this building. In 1993, five gallons of an unspecified hazardous substance were spilled inside of this building. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9306000). There have been no other documented releases associated with this building. This parcel is designated as Category 3.

BRAC Parcel Number and Label 14(3)HS/HR

CERFA Map Location 22,22

This parcel is associated with Building 331, a warehouse. Visual inspections and interviews conducted during the 1995 EBS indicated that pesticides, soda ash, and antifreeze have been stored in this building. In 1992, three gallons of an unspecified hazardous substance was spilled inside this building. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9208729). There have been no other documented releases associated with this building. This parcel is designated as Category 3.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 17(3)HS/HR

CERFA Map Location 22,22

This parcel is associated with Building 323, a warehouse. Visual inspections and interviews conducted during the 1995 EBS indicated that pesticides, soda ash, and antifreeze have been stored in this building. In 1992, three gallons of an unspecified hazardous substance were spilled inside this building. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9112897). This parcel is designated as Category 3.

BRAC Parcel Number and Label 19(3)HS/HR

CERFA Map Location 21,22

This parcel is associated with Building 307, a hazardous waste container storage facility. Records indicated that this building has been used for the storage of waste materials, such as PCBs, solvents, corrosive liquids, flammable solids, and flammable liquids. The building conforms to hazardous waste storage regulations in the state of New York (New York Regulations Title 6, Section 373-2) and is included in the RCRA Part B permit application. In 1991, 45 gallons of an unspecified hazardous substance were spilled inside this building. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9100990). This building is one of the previously recognized SWMUs (SEAD-1) and has been previously classified as a No Action SWMU under CERCLA. This parcel is designated as Category 3.

BRAC Parcel Number and Label 24(3)PS/PR/HS CERFA Map Location 19,23

This parcel is associated with Building 118, an auto shop, and Building 120, a gas station. A 500-gallon used oil AST (SRN 23) is located at Building 118. Building 118 is one of the presently recognized SWMUs (SEAD-30) and has been classified by Engineering Science, Inc. as a No Action SWMU under CERCLA. This designation was based on the previous presence of a 550-gallon waste oil UST (Former SRN 208) that has been removed. Records indicate that no evidence of release was observed when the tank was removed in 1992. In 1992, two gallons of diesel fuel were spilled inside Building 118. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9204312). Two USTs are located at Building 120; SRN 168 is a 20,000-gallon gasoline UST and SRN 176 is a 10,000-gallon diesel fuel UST. There have been

no documented releases associated with the AST or any of the USTs. This parcel is designated as Category 3.

BRAC Parcel Number and Label 29(3)PS/PR

CERFA Map Location 19,21

This parcel is associated with a petroleum AST located at Building 129 (SRN 187). This AST is used to store 60,000 gallons of fuel oil. In 1994, a 15-gallon release from this tank was reported because of mechanical failure. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9402116). This parcel is designated as Category 3.

BRAC Parcel Number and Label 44(3)PR/HR

CERFA Map Location 29,26

This parcel is associated with the LORAN-C building. Interviews revealed that in 1995 there was a 100-pound accidental release of halon in the control room of this building. The control room was evacuated and ventilated, and the released materials were cleaned up. No other actions were taken. In 1991, an unknown quantity of diesel fuel was released at this facility. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9306216). This parcel is designated as Category 3.

BRAC Parcel Number and Label 45(3)HS/HR

CERFA Map Location 27,25

This parcel is associated with Building 356, a warehouse. This building is one of the recognized SWMUs (SEAD-49) because it was used to store columbite ore from 1973 to 1993. According to the *Solid Waste Management Unit Classification Study*, no evidence of a release was observed, and a radiological survey of the building did not find any readings above background levels, leading to a No Action classification.

This building is presently used for the storage of DS-2. In June of 1995, three spills involving DS-2 were noted for this building. One spill of three gallons of DS-2 was reported to the NYSDEC (Spill No. 9503157). The other two spills involved two quarts of DS-2. The three

spills were inside 40-foot steel containers that were being off-loaded into Building 356. These spills were cleaned up, and the reported case is closed. This parcel is designated as Category 3.

BRAC Parcel Number and Label 46(3)HR

CERFA Map Location 18,21

This parcel is associated with a scrap wood storage site. This site is one of the presently recognized SWMUs (SEAD-10). Periodic releases to the air, because of the burning of wood in this area, have been documented. This SWMU has been previously classified as a No Action SWMU under CERCLA. This parcel is designated as Category 3.

BRAC Parcel Number and Label 47(3)PS/PR/HS

CERFA Map Location 2,14

This parcel is associated with Building 732, the Auto Hobby Shop in the North Administration Area. This building has been previously classified as a No Action SWMU (SEAD-29). Interviews conducted during the 1995 EBS revealed that numerous small quantity spills of petroleum products occurred in this building. However, there have been no reported spills inside this building since 1990. Before 1990, procedures were in place for addressing the spills as they occurred to ensure prompt cleanup. The petroleum product may have also drained into the floor drains and entered the storm sewer system. The presence of an oil/water separator has likely minimized any actual release. When this facility was closed and the hydraulic lifts were removed, sampling was conducted that indicated there was no need for any remedial actions. One UST (SRN 59) is located at this site. It has a 550-gallon capacity, is used to store waste oil, and has been in service since 1982. There has been no record of leakage from this tank. This parcel is designated as Category 3.

BRAC Parcel Number and Label 129(3)HR

CERFA Map Location 19,2

This parcel is associated with an area adjacent to Building 2438, located in the Lake Housing Area. In 1993, a release of 500 gallons of sewage occurred because of a mechanical failure. The spill was cleaned up, and the case is closed. (NYSDEC Identification Number 9213269). This parcel has been designated as Category 3.

BRAC Parcel Number and Label 130(3)PR/HR(P)

CERFA Map Location 24,23

This parcel is associated with Building 349, a warehouse. Three spills involving fuel oil, non-PCB oil, and an unknown substance, have been reported to have occurred inside this building The spills were cleaned up, and the cases are closed (see Table 2.3 for details). This parcel has been designated as Category 3.

BRAC Parcel Number and Label 131(3)PS/PR/HS/HR

CERFA Map Location 27,25

This parcel is associated with Building 357, a warehouse. At the time of the EBS site inspection, this building was not being used for hazardous storage. However, various types of hazardous materials were stored in this building in the past. Five spills involving small quantities (5 gallons or less) of unspecified hazardous materials have been reported to have occurred inside this building. The spills were all cleaned up, and the cases are closed (see Table 2-3 for identification numbers). In 1987, a leak of 75 gallons of fuel oil was reported at this building. The release was cleaned up, and the case is closed (NYSDEC Identification Number 8708149). This parcel has been designated as Category 5.

BRAC Parcel Number and Label 132(3)PR/HR(P)

CERFA Map Location 18,17

In 1992, a small spill of "waste oil" reportedly occurred near storage igloo C509. This incident involved motor oil and hydraulic fluid released from a tractor that overturned while mowing in this area. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9206638). This parcel has been designated as Category 3.

5.1.4 Category 4 Parcels

Of the 10,634 acres that comprise the Seneca Army Depot Activity BRAC property, four parcels, approximately two acres, were designated as Category 4. The Category 4 parcels are identified on Figure 5-1 and are summarized in the following sections.

BRAC Parcel Number and Label 6(4)PS/PR CERFA Map Location 28,10

This parcel is associated with a UST located at Building 2310 in the Airfield Area. This UST (SRN 185) is used to store 30,000 gallons of JP8 and has been in service since 1990. A visual JP8 inspection of the area did not reveal any evidence of contamination. In 1988, this tank was reported as leaking; an unknown quantity of jet fuel was released. All necessary remedial actions have been taken, and the case is closed (NYSDEC Identification Number 9402116). This parcel is designated as Category 4.

BRAC Parcel Number and Label 8(4)PS/PR

CERFA Map Location 28,10

This parcel is associated with reported spills and a UST located at Building 2305. This UST (SRN 69) is used to store 1,000 gallons of fuel oil and has been in service since 1957. A visual inspection of the area did not reveal any evidence of contamination. In 1987, this tank was listed as a LUST. Reportedly an unknown quantity of No. 2 fuel oil was released. All necessary remedial actions have been taken and the case is closed (NYSDEC Identification Number 9011429). Two spills were reported at or near Building 2305. These have a two-gallon release of non-PCB oil that was related to an automobile accident (NYSDEC Identification Number 9411405) and a twenty-five gallon release of fuel oil from an overfilled tank (NYSDEC Identification 9011429). This parcel is designated as Category 4.

BRAC Parcel Number and Label 37(4)PS/PR

CERFA Map Location 3,12

This parcel is associated with a petroleum UST located at Building 710 (SRN 36). This UST is used to store 1,000 gallons of fuel oil and has been in service since 1991. In 1989, this UST was reported as leaking; an unknown quantity of fuel oil was released. All necessary remedial actions were taken; and the case is closed (NYSDEC Identification Number 8907242). This parcel is designated as Category 4.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 133(4)PS/PR

CERFA Map Location 19,2

In 1992, a leach was reported involving an unknown quantity of fuel from an AST near Building 2452, located in the Lake Housing Area. All necessary remedial actions were taken, and the case is closed (NYSDEC Identification Number 9204266). This parcel has been designated as Category 4.

BRAC Parcel Number and Label 134(4)PS/PR

CERFA Map Location 2,14

In 1992, a leak was reported involving seven gallons of fuel oil from an AST near Building 752, located in the North Depot Area. All necessary remedial actions were taken, and the case is closed (NYSDEC Identification Number 9207220). This parcel has been designated as Category 4.

BRAC Parcel Number and Label 135(4)PS/PR

CERFA Map Location 19,23

In 1990, a leak was reported involving an unknown quantity of fuel oil from an AST near Building 212 in the Elliot Acres Housing Area. All necessary remedial actions were taken, and the case is closed (NYSDEC Identification Number 8910053). This parcel has been designated as Category 4.

BRAC Parcel Number and Label 136(4)PR

CERFA Map Location 2,11

This parcel is associated with Building 715, a sewage treatment plant. In 1987, a fuel line ruptured inside of Building 718, a boiler plant. The fuel oil entered the sewage system and traveled to Building 715 where it was contained in the secondary sewage treatment facility. The release was cleaned up, and the case is closed (NYSDEC Identification Number 8910830). This parcel has been designated as Category 4.

5.1.5 Category 5 Parcels

Of the 10,634 acres that comprise the Seneca Army Depot Activity BRAC property, six parcels, approximately 207 acres, were designated as Category 5. The Category 5 parcels are identified on Figure 5-1 and are summarized in the following sections.

BRAC Parcel Number and Label 48(5)HR CERFA Map Location 22,12

This parcel consists of a non-combustible landfill (SEAD-8), an incinerator cooling water pond (SEAD-3), an ash landfill (SEAD-6), refuse burning pits (SEAD-14), a solid waste incinerator (SEAD-15), and a disposal area west of Building 2203 (SEAD-64D).

The non-combustible landfill was used from 1974 to 1979 to dispose of materials that were either non-combustible or too bulky to be incinerated or burned. The incinerator cooling water pond was used from 1974 to 1979 to hold the cooling water and fly ash generated from the scrubber of the solid waste incinerator. The fly ash was removed every 18 months and disposed of at the ash landfill. The ash landfill was used from 1941 to the late 1950s or early 1960s, and again from 1974 to 1979. Ash from the refuse burning pits was disposed of from 1941 until the late 1950s or early 1960s. In 1994 and 1995, soil from the ash landfill was excavated and treated utilizing a Low Temperature Thermal Desorption system. Groundwater contamination at this site remains to be mitigated. The refuse burning pits were used from 1941 to 1974 to burn all wastes generated on the depot until the incinerator opened in 1974. After burning, metal was removed for recycling and the ash was pushed into the ash landfill. The solid waste incinerator was used from 1974 to 1979 to burn depot refuse.

The disposal area west of Building 2203 was reportedly used for the dumping of crushed heavy gauge metal drums, empty smoke generating canisters, and various other metallic debris. Five of these SWMUs (SEADs-3, 6, 8, 14, and 15) have been combined into an Operable Unit, referred to as the Ash Landfill, that is currently being investigated under the CERCLA RI/FS. Results of an ESI conducted by Engineering Science, Inc. indicated that one large debris pile in the southwestern portion of SEAD-64D may have impacted the soils and groundwater locally. Engineering Science, Inc. has recommended an RI/FS for this SWMU.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

This parcel is designated as Category 5.

BRAC Parcel Number and Label 49(5)HS/HR CERFA Map Location 29,19

This parcel is associated with 11 pitchblende storage igloos (EO801 to EO811) and a railroad loading area. In the 1940s, the igloos were used for the storage of about 2,000 barrels of pitchblende, a uranium ore. After the pitchblende was removed, the igloos were used for the storage of conventional munitions until about 1979. This area is a previously recognized SWMU (SEAD-48). In 1976, a radiological survey indicated that while no health hazards existed, the radiation levels present were in excess of allowable concentrations that would permit unrestricted use of the 11 storage igloos and the surrounding areas. Remediation was conducted in the 1980s, but NYSDEC and the New York State Department of Health found that contamination still existed. This SWMU has been classified as a Low Priority AOC under CERCLA, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 5.

BRAC Parcel Number and Label 50(5)PS/PR/HR(P) CERFA Map Location 21,22

This parcel consists of two waste oil storage USTs (SEAD-34), a boiler blowdown leach pit (SEAD-40), and two waste oil burning boilers at Building 319 (SEAD-37).

Both of the USTs have been in use since 1951 for fuel oil storage, and small quantities of waste oil were stored in them from 1982 to 1989. One tank has a 30,000-gallon capacity (SRN 196) and the other has a 20,000-gallon capacity (SRN 197). Limited sampling by Engineering Science, Inc. detected the presence of total petroleum hydrocarbon (TPH) in two soil samples. In 1994, a LUST were reported at this location; 40 gallons of gasoline were released. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9402630). This SWMU is classified as a Low Priority AOC, and an RI/FS of this SWMU is scheduled.

In 1994, 40 gallons of fuel oil were released in this area. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9402630). In 1992, 30 gallons of fuel oil were

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

released in this area. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9111882).

The boiler blowdown leach pit was used from the time the boilers were first placed in service to the time when the blowdown points were connected to the sanitary sewer system in 1979 or 1980, which constitutes a first step toward remediation of this area. Limited sampling by Engineering Science, Inc. detected TPH in surface and subsurface soil samples. This SWMU is classified as a Low Priority AOC, and remedial action has been recommended by Engineering Science, Inc.

The two boilers in Building 319 were used to burn a waste oil and No. 6 fuel oil mixture from 1982 to 1989 and are still functional. This SWMU is classified as a No Action SWMU under CERCLA.

This parcel is designated as Category 5.

BRAC Parcel Number and Label 51(5)PS/PR/HS/HR(P) **CERFA Map Location 21,21**

This parcel consists of two waste oil USTs (SEAD-28), three fuel oil USTs, and a steam (Jenny) cleaning waste tank (SEAD-27). All of these facilities are located at Building 360 in the Main Depot Area just west of the IPE Subarea. The two waste oil USTs (SRN 26, Building 355E; and SRN 206, Building 355W) had a 2,005-gallon capacity and had been used since 1981 to provide a fuel supplement to boilers. SRN 206 was found to contain water in 1993 and was subsequently removed. SRN 26 was unused and subsequently removed in December of 1994. A visual inspection in 1990 revealed that waste oil had been spilled around both of the tanks. Removal and appropriate disposal of surficial soil in this area was conducted, but NYSDEC requires that SEAD-28 be considered an AOC. It has been classified as a Low Priority AOC, and the development of a Site Inspection (SI) Workplan has been recommended by Engineering Science. Inc.

The three fuel oil USTs located in this parcel are SRN 29 (500-gallon), SRN 30 (500-gallon), and SRN 31 (1,000-gallon). Tanks 29 and 30 have been in place since 1969 and Tank 31 since 1980. There is no evidence of a release from any of these three USTs. The steam cleaning waste tank is an open-top concrete tank with a grate over the top. It has a maximum capacity of 4,500 gallons. It was in use from 1976 to 1989 to collect wastewater from the cleaning and degreasing of equipment that was being refurbished in Building 360. This SWMU has been previously classified as a Low Priority AOC, and a RCRA Closure Plan is under review. This parcel is designated as Category 5.

BRAC Parcel Number and Label 52(5)PR

CERFA Map Location 19,23

This parcel is associated with an oil spill that started from a failed UST at Building 138. The incident occurred on November 19, 1992 and involved the release of approximately 1,900 gallons of fuel oil. The oil drained from the tank into the storm drain, then into a drainage ditch, and ultimately into Kendaia Creek. The total length of the release is about one mile. The incident was reported to NYSDEC (LUST No. 9209672) and cleanup actions followed. However, based on an interview conducted during the 1995 EBS, and the unavailability of a closure report regarding this incident, it appears that additional remediation efforts may still be required. This parcel is designated as Category 5.

BRAC Parcel Number and Label 53(5)HR

CERFA Map Location 3,17

This parcel is associated with an area located northeast of Building 813 that was used for radioactive burial. This area is one of the previously recognized SWMUs (SEAD-12A). Reported radioactive waste was buried here in the form of swipes and other laboratory wastes. This area was excavated in 1986, and the trash was containerized and shipped to an authorized off-post radioactive waste landfill in December 1987. The results of an ESI conducted by Engineering Science, Inc. indicated that fill material sampled at this location has been contaminated by heavy metals. This SWMU is classified as a Moderately Low AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 5.

5.1.6 Category 6 Parcels

Of the 10,634 acres that comprise the Seneca Army Depot Activity BRAC property, 53 parcels, approximately 1,725 acres, were designated as Category 6. The Category 6 parcels are identified on Figure 5-1 and are summarized in the following sections.

BRAC Parcel Number and Label 54(6)HR(P)

CERFA Map Location 16,2

This parcel is associated with a lift station located by Building 2409, a former pump house presently used for dry storage. A raw sewage release was observed on the east side of this building during the 1995 EBS visual inspection. The lift station receives wastes from multiple sources, potentially containing hazardous substances. This parcel is designated as Category 6.

BRAC Parcel Number and Label 55(6)PR(P)/HR

CERFA Map Location 18,11

This parcel is the abandoned powder burning pit. This area is one of the previously recognized SWMUs (SEAD-24). Records indicate that black powder, M10 and M6 solid propellants, and probably explosive-contaminated trash were disposed of in this area from the 1940s to the 1950s. An ESI conducted at this site by Engineering Science, Inc. indicated soil contamination from arsenic has occurred. TPH was also documented in low concentrations. No adverse impacts to the groundwater have occurred. This SWMU has been classified as a High Priority AOC, and a removal action in conjunction with a limited investigation has been recommended by Engineering Sciences, Inc. This parcel is designated as Category 5.

BRAC Parcel Number and Label 56(6)PR

CERFA Map Location 29,12

This parcel is the site of an aviation fuel spill that occurred in 1990 and was revealed during an interview. The incident occurred on the "hot pad" located about 800 feet west of Building 2312. The spill involved more than 50 gallons of fuel, which ran off the pad into the grass. No records indicate that this spill was cleaned up. Records indicate that two other spills of aviation fuel also

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

occurred at this location. These spills were cleaned up, and these cases are closed (see Table 2-3 for details). This parcel is designated as Category 6.

BRAC Parcel Number and Label 57(6)PS/PR/HR CERFA Map Location 32,17

This parcel consists of a fuel oil AST at Building 2076, a UST at Building 2073, the former munitions washout plant (SEAD-4), a construction debris landfill (SEAD-11), a boiler plant blowdown leach pit at Building 2079 (SEAD-38), and dumping areas. Other buildings included within this parcel are S-2084, 2077, 2078, and 2081. The fuel oil AST located at Building 2076 (SRN 4) has a 275-gallon capacity and has been in service since 1988. No evidence of a release from this tank was found. In 1993, a leak of an unknown quantity of fuel oil was reported at Building 2079. The release was cleaned up, and the case is closed (NYSDEC Identification Number 9307375).

This parcel is also associated with a petroleum UST located at Building 2073 (SRN 203). This UST is used to store 1,000 gallons of fuel oil and has been in service since 1986. In 1992, 15 gallons of fuel oil were spilled at Building 2073. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9209232).

The munitions washout plant was used from 1948 to 1963. The results of an ESI conducted by Engineering Science, Inc. at this area indicate that impacts to the surface soils, sediment, surface water, and groundwater have occurred. An effort was made during the ESI to locate a leach field that was associated with this facility. The leach field was not found, but three different surface water drainages were found to be impacted. This SWMU has been classified as a High Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc.

The construction debris landfill was used from 1946 to 1949. An ESI conducted at this site by Engineering Science, Inc. indicates that impacts to the surface and subsurface soils have occurred. The results of a groundwater sampling program conducted by Engineering Science, Inc. indicate that iron, lead, and sodium were present in individual downgradient wells at

concentrations above criteria values. This SWMU has been classified as a Moderate Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc.

The boiler plant blowdown leach pit at Building 2079 was in use until 1979 or 1980. Results of a limited sampling program conducted by Engineering Science, Inc. at this site indicated that TPH was present in the surface soil samples at levels considered to be evidence of a release of petroleum hydrocarbons. This SWMU has been classified as a Low Priority AOC, and a Remedial Action has been recommended by Engineering Science, Inc.

Visual inspections during the 1995 EBS revealed that dumping activities have occurred in the "50 Area" west of Seneca Road and south of Indian Creek Road. Two of the dumping areas were observed to contain concrete blocks and fill dirt (SMK-42 and SMK-43; SMK are the initials of one of the field investigators and were used to label and track areas of visual inspection), one had steel drums (SMK-44), and one is believed to be a former railroad dump containing railroad ties and scrap metal (SMK-46). An aerial photograph from circa 1941 showed a construction staging area located within this parcel.

This parcel is designated as Category 6.

BRAC Parcel Number and Label 58(6) HR CERFA Map Location 31,19

This parcel is associated with a former garbage disposal area south of the classified yards and north of Ovid Road. This area is one of the previously recognized SWMUs (SEAD-64B). Results of an ESI conducted at this site by Engineering Science, Inc. indicate that minimal impacts to the soil, sediment, surface water, and groundwater have occurred. This SWMU is classified as a Low Priority AOC, and a mini-risk assessment has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 59(6)PS/PR/HR CERFA Map Location 31,22

This parcel is associated with an ammunition breakdown area at Buildings 608 and 612 (SEAD-52), an oil discharge adjacent to Building 609 (SEAD-60), and a UST and an AST at Building 609. The ammunition breakdown area has been in use from the 1940s to the present. A limited sampling program by Engineering Science, Inc. has detected the presence of explosive compounds in the soil, constituting evidence of a release. This SWMU is classified as a Low Priority AOC, and the development of an ESI Workplan has been recommended by Engineering Science, Inc.

The oil discharge area immediately west of Building 609 was discovered in 1989 and is believed to have come from a pipe located inside of the building. Results of an ESI conducted at this site by Engineering Science, Inc. revealed the presence of petroleum hydrocarbons and PAHs, heavy metals, and (to a lesser extent) PCB compounds in the surface soils. Semi-volatile organic compounds (SVOCs) and TPH were found in sediment samples taken downslope of the oilstained soil. TPH has also been shown to have impacted the groundwater beneath the oil release area. This SWMU is classified as a Low Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc.

Fuel oil storage has also occurred within this parcel. Associated with Building 609 are a UST and an AST. SRN 34 was a 3,000-gallon UST that had been in service since 1954. This tank was removed in August 1996 and will be replaced by a 3,000-gallon AST in October 1996. The SRN will remain as 34. SRN 35 is a 1,000-gallon AST that has been in service since 1953. No evidence of release from either of these tanks has been documented.

This parcel is designated as Category 6.

BRAC Parcel Number and Label 60(6)HR CERFA Map Location 32,23

This parcel is associated with a material proof and surveillance test area west of Building 616. This area was used between 1960 and 1980 and is one of the previously identified SWMUs

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

(SEAD-44A). The results of an ESI conducted at this site by Engineering Science, Inc. indicate that there have been no significant releases to the media investigated. However, organic compounds were detected at elevated concentrations in the berm excavation samples. This SWMU was classified as a Moderately Low Priority AOC, and a mini-risk assessment has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 61(6)HR

CERFA Map Location 30,22

This parcel is associated with a material proof and surveillance test area on Brady Road. This area was used between 1960 and 1980 and is one of the previously identified SWMUs (SEAD-44B). The results of an ESI conducted at this site by Engineering Science, Inc. indicated that there have been no significant releases to the media investigated. However, elevated concentrations of PAH compounds were detected in a soil sample. This SWMU was classified as a Moderately Low Priority AOC, and a mini-risk assessment has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 62(6)HR(P)

CERFA Map Location 31,23

This parcel is associated with a nicotine sulfate disposal area near Buildings 606 and 612. This area was previously reported to have been used for the burial of drums containing nicotine sulfate and is one of the previously identified SWMUs (SEAD-62). An ESI conducted at this site by Engineering Science, Inc. did not identify any areas that were used for the disposal of nicotine sulfate nor were there any areas that had been significantly impacted by a release of oil or other hazardous materials. This SWMU was classified as a Low Priority AOC, and a mini-risk assessment has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 63(6)PS/HS/HR

CERFA Map Location 30,25

This parcel is associated with the old missile propellant laboratory and a UST at Building 606 (SEAD-43), a disposal area southeast of Building 606 (SEAD-69), and a former herbicide and

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

pesticide storage area at Building 606 (SEAD-56). A 2,000-gallon fuel oil UST (SRN 33) was located at Building 606. This UST was installed in 1956 and it was removed in August 1996. This tank will not be replaced and its SRN has been reassigned. Building 606 was used as a missile propellant test laboratory in the 1960s. From 1976 to the present, the building has been used for pesticide and herbicide storage. It has been reported that debris, including fence posts, 2,4-D cans, and pesticide cans, has been disposed of southeast of Building 606. The results of an ESI conducted at these three SWMUs by Engineering Science, Inc. indicated that no significant impacts have occurred to any of the media investigated at this site. Limited releases of PAHs were detected in the soil samples collected in close proximity to Building 606. All of the remaining PAHs that were detected at these SWMUs were found at concentrations that were either below their respective Technical Assistance Guidance Memorandum levels (TAGMs) or exceeded their respective TAGMs by less than a factor of three. According to the ESI report (Engineering Science, Inc. 1995a), metals were the only other constituents that were detected at concentrations that slightly exceeded their respective criteria for soils, groundwater, surface water, and sediment. However, no significant concentrations of heavy metals were found at these SWMUs. All three of these SWMUs have been classified as Moderately Low Priority AOCs, and mini-risk assessments have been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 64(6)HR CERFA Map Location 25,22

This parcel is associated with a disposal area west of Building 2203. It has been reported that asbestos and debris, including metal drums, empty smoke-generating canisters, and other metal debris, have been dumped in this area. This parcel is one of the previously identified SWMUs (SEAD-64A). The results of an ESI conducted by Engineering Science, Inc. at this location suggest that there have been several localized impacts to the soil and groundwater. The SWMU was classified as a Low Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 65(6)HS/HR(P)

CERFA Map Location 25,22

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is zinc, which is considered a hazardous material. U.S. Army Toxic and Hazardous Materials Agency (USATHAMA) has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 66(6)HR

CERFA Map Location 26,22

This parcel is associated with a fire training pit and area located to the south of Building 328. This training pit and area have been in use from 1977 to the present. This parcel is one of the previously recognized SWMUs (SEAD-26). An ESI conducted at this site by Engineering Science, Inc. indicated that SVOCs were detected at concentrations above TAGM values in several of the surface and subsurface soil samples analyzed, and the site is considered to pose a threat. This SWMU has been classified as a High Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 67(6)HS/HR(P)

CERFA Map Location 26,26

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is chromite, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 68(6)HS/HR(P)

CERFA Map Location 25,25

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is aluminum oxide, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 69(6)HS/HR(P)

CERFA Map Location 26,26

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is antimony, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 70(6)HS/HR(P)

CERFA Map Location 26,26

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is ferro chrome, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 71(6)HS/HR(P)

CERFA Map Location 26,25

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is antimony, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 72(6)HS/HR

CERFA Map Location 25,24

This parcel is associated with the Tank Farm Area. At one time, there may have been as many as 60 ASTs used to store antimony, asbestos, silicon carbide, and rutile. Presently, only four of the tanks remain: Tanks 8 and 17, antimony storage; Tank 88, asbestos storage; and Tank 302, rutile storage. An ESI conducted of this area by Engineering Science, Inc. has documented a hazardous release associated with these ASTs (Engineering Science, Inc. 1995a). This area comprises two of the recognized SWMUs (SEADs 50 and 54) that have been combined as SEAD-50 and was previously classified as a Moderately Low Priority AOC. A Decision Document outlining a limited sampling program and a removal action was recommended. This parcel is designated as Category 6.

BRAC Parcel Number and Label 73(6)HS/HR(P)

CERFA Map Location 24,23

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is chromite, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 74(6)HS/HR(P)

CERFA Map Location 24,22

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is ferro manganese, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 75(6)HS/HR(P)

CERFA Map Location 23,23

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is chromite, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 76(6)HS/HR(P)

USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 77(6)PR/HR

CERFA Map Location 22,22

This parcel is associated with an area to the north of Building 325 where PCBs were reported to have been spilled. An interview revealed that 55 gallons of PCB oil were spilled in this location, but it was uncertain when. It was reported that there was no cleanup of this release, and there is no record that this spill was ever reported to NYSDEC. This parcel is designated as Category 6.

BRAC Parcel Number and Label 78(6)HS/HR

CERFA Map Location 21,21

This parcel is associated with the DRMO yard to the west of Building 360. Interviews revealed that hazardous materials such as solvents and PCB oil have been dumped in this area. The parcel has been designated as Category 6.

BRAC Parcel Number and Label 79(6)HR

CERFA Map Location 20,22

This parcel is associated with a fire training and demonstration pad to the north of Ordnance Road and west of Administration Avenue. This facility has been in use since the late 1960s and is one of the previously recognized SWMUs (SEAD-25). An ESI conducted at this site by Engineering Science, Inc. revealed that BTEX compounds have impacted the surface and subsurface soils and groundwater at this site. This SWMU was classified as a High Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 80(6)PS/HR

CERFA Map Location 20,20

This parcel consists of an AST and a deactivation furnace located at Building 367. A 2,000-gallon fuel oil AST (SRN 32) was installed at this building in 1990. There is no record of release from this AST. This area corresponds with one of the previously identified SWMUs (SEAD-17). The furnace was used from 1962 to the present for the destruction of ammunition and is currently operating under interim status as part of the Part B RCRA permit. Proper closure of the site will

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

be required as part of the RCRA permit. An ESI conducted at this SWMU by Engineering Science, Inc. indicated that impacts to the surface soils from the release of SVOCs and heavy metals have occurred at this site. This SWMU is classified as a High Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 81(6)HS/HR CERFA Map Location 19,21

This parcel is associated with sewage sludge waste piles from the two sewage treatment plants. Sewage sludge has been deposited here since 1980. This area is one of the previously recognized SWMUs (SEAD-5). An ESI conducted at this SWMU by Engineering Science, Inc. revealed a significant release of PAHs in the material of the sewage sludge piles; however, it appears that the groundwater underneath the piles has not been impacted. This SWMU was classified as a Moderately Low AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 82(6)PS/PR/HS/HR CERFA Map Location 19,21

This parcel consists of a deactivation furnace located at Building S-311, a previously reported LUST at Building S-311, and a raw material storage yard at Building S-361. The deactivation furnace corresponds to one of the previously identified SWMUs (SEAD-16). The furnace was used from 1945 to the mid-1960s for the destruction of small arms. An ESI conducted at this SWMU by Engineering Science, Inc. indicated that impacts to the surface soils from the release of heavy metals and SVOCs have occurred at this site. This SWMU was classified as a High Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc.

The database search and Seneca Army Depot Activity records indicate that in 1993 a LUST was reported at Building S-311. It was reported that 20 gallons of No. 2 fuel oil were released and that the case is still open (NYSDEC Identification Number 9307284).

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

A raw material storage yard located west of Building S-361 and containing drums, scrap wood, and other materials was observed during the 1995 EBS.

This parcel is designated as Category 6.

BRAC Parcel Number and Label 83(6)HS/HR(P)

CERFA Map Location 19,19

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is chromite, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. contain drums, scrap wood, and other materials. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 84(6)PS/PR/HR(P)

CERFA Map Location 18,19

This parcel is associated with Building 306, an inspector's workshop, and Building 308, a boiler house. Records indicate that a 1,000-gallon fuel oil UST (SRN 20) is located at Building 308. This UST has been in service since 1942. Interviews conducted during the 1995 EBS revealed that petroleum has been released in the area of Building 306. The interviews also revealed that paints and solvents have been stored in this building and may have been released. This parcel is designated as Category 6.

BRAC Parcel Number and Label 85(6)PR/HR

CERFA Map Location 19,21

This parcel is associated with a fill area west of Building 135. The contents of this fill area are unknown. This area corresponds to one of the previously identified SWMUs (SEAD-59). An ESI conducted at this SWMU by Engineering Science, Inc. identified several areas that have been impacted by releases of volatile organic compounds (VOCs), SVOCs, TPH, and, to a lesser extent, heavy metals. Analyses also indicated that the groundwater has been moderately

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

impacted by TPH. This SWMU was classified as a Moderately Low Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 86(6)PR/HS/HR

CERFA Map Location 19,22

This parcel is associated with Building 135. This building has been used for vehicle storage over the last 25 years. A visual inspection during the 1995 EBS documented that the dirt floor was extensively stained with oil, fuel, and hydraulic fluid. An interview for the 1995 EBS revealed that this building had been used for acid storage. This interview also documented the release of acids in this building. This parcel is designated as Category 6.

BRAC Parcel Number and Label 87(6)PS/PR/HR(P)

CERFA Map Location 19,23

This parcel consists of a waste oil UST (SEAD-33), two waste oil burning boilers (SEAD-36), and a boiler blowdown leach pit (SEAD-39). All of these facilities are located at Building 121. The UST (SRN 198) has a 30,000-gallon capacity and has been in use since 1943. Small quantities of waste oil were stored in it from 1982 to 1989, and it was also used to store fuel oil. Limited sampling conducted by Engineering Science, Inc. detected the presence of TPH in the soil adjacent to this tank. This SWMU was classified as a Low Priority AOC, and a mini-risk assessment has been recommended by Engineering Science, Inc.

The waste oil burning boilers were used to burn a waste oil and No. 6 fuel oil mixture from 1982 to 1989. The only releases known are permitted air emissions. This SWMU was classified as a No Action SWMU under CERCLA by Engineering Science, Inc. The boiler blowdown leach pit was in use until the blowdown points were connected to the sanitary sewer in 1979 or 1980. Results of limited sampling performed at this site by Engineering Science, Inc. revealed TPH in the soil. This SWMU has been classified as a Low Priority AOC, and a Remedial Action has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 88(6)PS/PR

CERFA Map Location 19,22

This parcel is associated with a UST and stained mound located near Building 127. The UST (SRN 177) has a 12,000-gallon capacity and is used to store diesel fuel. It has been in service since 1985. A visual inspection of this UST during the 1995 EBS documented some discoloration of the concrete at the base of the pump. The visual inspection also noted an earthen mound with oil or hydraulic fluid staining to the southwest of Building 127. This parcel is designated as Category 6.

BRAC Parcel Number and Label 89(6)HR

CERFA Map Location 18,22

This parcel is associated with an alleged paint/solvent disposal area located west of Building 127. This site is one of the previously recognized SWMUs (SEAD-71). The results of an ESI conducted at this location by Engineering Science, Inc. revealed that the soils have been impacted by waste materials that were placed in at least one disposal pit on site. Groundwater at the site has not been significantly impacted by any of the constituents for which analyses were conducted during the ESI. This SWMU is classified as a Low Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 90(6)PR(P)/HR

CERFA Map Location 17,22

This parcel is associated with an old scrap wood site located north of Kendaia Road and south of the East Patrol Road. The site was used to dispose of scrap wood from 1984 to 1986, and construction debris was dumped at this site from 1977 to 1984. This site is one of the recognized SWMUs (SEAD-9). The results of an ESI conducted at this site by Engineering Science, Inc. indicated that releases of PAHs, hydrocarbons, and inorganic metals have occurred in the fill material of the site. These results also indicated that TPH has impacted the groundwater downgradient of the site. This SWMU was classified as a Moderately Low Priority AOC, and a mini-risk assessment has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 91(6)HS/HR(P)

CERFA Map Location 17,19

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is chromite, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 92(6)HS/HR(P)

CERFA Map Location 16,19

This parcel is associated with a former pesticide storage area that is known to have been located in the vicinity of Buildings 5 and 6. This area corresponds with one of the previously recognized SWMUs (SEAD-66). The exact location of the former pesticide storage area is unknown. However, a small shed adjacent to Building 5 and a concrete pad adjacent to Building 6 are considered as possible locations of the former pesticide area. Limited sampling conducted in this area resulted in the detection of pesticide compounds above NYSDEC TAGMs. This SWMU has been classified as a Low Priority AOC, and an RI/FS Scoping Plan is being developed. This parcel is designated as Category 6.

BRAC Parcel Number and Label 93(6)HS/HR(P)

CERFA Map Location 16,19

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is aluminum oxide, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 94(6)HR

CERFA Map Location 16,20

This parcel is associated with Sewage Treatment Plant No. 4 (SEAD-20) and a dump site to the east of the plant (SEAD-67). Sewage Treatment Plant No. 4 has been used from 1942 to the present. The facility is operated under a NYDES permit. This SWMU was classified as a No Action SWMU under CERCLA by Engineering Science, Inc.

The area to the east of Sewage Treatment Plant No. 4 was reportedly used as a dump site. An ESI conducted at this SWMU by Engineering Science, Inc. identified soils and sediment that have been impacted predominately by PAHs and mercury. Groundwater and surface water at the site have not been significantly impacted by any of the constituents for which analyses were conducted during the investigation. This SWMU has been classified as a Low Priority AOC, and a limited sampling program and removal action have been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 95(6)HS/HR(P) CERFA Map Location 16,19

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is ferro manganese, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 96(6)HR(P)

CERFA Map Location 11,19

This parcel is associated with an abandoned IRFNA Disposal Site. This facility was in use during the 1960s, and this area corresponds to one of the locations of a previously identified SWMU (SEAD-13). An ESI conducted at this SWMU by Engineering Science, Inc. indicates that impacts to the groundwater have occurred at this site. This SWMU was classified as a

Moderate Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 97(6)HR(P)

CERFA Map Location 11,20

This parcel is associated with an abandoned IRFNA Disposal Site. This facility was in use during the 1960s and this area corresponds to one of the locations of a previously identified SWMU (SEAD-13). An ESI conducted at this SWMU by Engineering Science, Inc. indicates that impacts to the groundwater have occurred at this site. This SWMU was classified as a Moderate Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 98(6)PS/PR/HS/HR

CERFA Map Location 4,17

This parcel is associated with Buildings 801, 802, 803, 804, 805, 806, 807, 810, 813, 814, 815, 816, 817 and 819, and storage igloos A0101 and A0102. It also includes three of the previously recognized SWMUs (SEAD-72, SEAD-12B, and SEAD-19). Building 803 (SEAD-72) is a mixed waste storage building that at one time was used to store classified materials. Floor drains are located in each vault drain to the exterior and front of the building. No evidence of release has been documented, and, during a site visit by NYSDEC, it was noted that the floor drains had been plugged. This facility is a RCRA facility operating under interim status and must undergo closure as a requirement of the RCRA permit. This SWMU was previously classified as a No Action SWMU under CERCLA.

SEAD-12B consists of Building 804 and two burial pits located to the north, and Building 805. One of the pits was used for dry storage and the other contained a UST that was used for wastewater storage. The wastewater was generated during the washing of radioactive-contaminated clothing. The area was excavated in 1986. An ESI conducted at this SWMU by Engineering Science, Inc. indicated that although there has been no impacts to soils at this location, the groundwater has been impacted by the release of radionuclides. Building 805 is included in the SWMU because it has the potential to have residual radioactive contamination.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

This SWMU has been classified as a Moderately Low Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc.

In 1989, an unknown quantity of fuel oil was released from a tank at Building 806. All necessary remedial actions have been taken, and the case is closed (NYSDEC Identification Number 8907722). In 1991, seven gallons of gasoline were released from a tank at Building 807. The release was cleaned up, and the case is closed (NYSDEC Identification Number 9412037).

SEAD-19 consists of Building 810 and a classified document incinerator. The incinerator was operated from 1956 to 1983. This SWMU was previously classified as a No Action SWMU under CERCLA.

Building 815 was a paint shop, and Buildings 813 and 814 were used for storage. Extensive amounts of paints and solvents were used and stored in these facilities. There was no visible evidence of spills or leaks in these buildings. However, interviews conducted during the 1995 EBS revealed that unknown quantities of paints and solvents were disposed of into the drainage ditch that flows north, immediately east of Building 813.

Buildings 816 and 817 were associated with a classified mission. The majority of Building 816 was not available for inspection. Interviews with a radiation protection officer revealed that a potential release of radionuclides occurred within the area of these buildings. Two radiation screening rooms, with venting leading directly outside the buildings, were also observed. Aerial photograph analysis during the 1995 EBS also revealed disturbed ground directly west of Building 816. A visual inspection of this area during the 1995 EBS confirmed that the disturbance had occurred. Interviews and records searches could not confirm or deny whether or not any burial activities were conducted in this area.

A visual inspection was attempted at Building 810 during the 1995 EBS, but access to this entire building was denied based on the classified mission of the building. A visual inspection was attempted of the ammunition storage igloos A0101 and A0102 and the surrounding area. Access to this area during the 1995 EBS was denied based on the classified mission of the area. A visual inspection of Building 819 was performed, but its mission could not be described.

Nine USTs are also located within this parcel. A 1,000-gallon fuel oil UST (SRN 46) is located at Building 802. This UST has been in service since 1956. A fuel oil UST (SRN 47) with a 1,000-gallon capacity is located at Building 805. This UST has been in service since 1956. A UST located at Building 806 (SRN 48) is used to store 1,000 gallons of fuel oil and has been in service since 1991. A visual inspection of the area did not reveal any evidence of contamination or release, and there is no record of any release. A UST located at Building 812 (SRN 52) is used to store 1,500 gallons of fuel oil and has been in service since 1956. A visual inspection of the area did not reveal any evidence of contamination or release, and there is no record of any release. The tank list shows two fuel oil USTs associated with Building 819. SRN 57 was a 3,000-gallon UST that had been in service since 1957. This tank was removed and replaced with a 1,000-gallon AST (SRN 26) in August 1996. SRN 182 is a 10,000-gallon UST that has been in service since 1981. There is a 2,500-gallon UST (SRN 53) located at Building 813 that has been in service since 1990. There is a 3,000-gallon UST (SRN 55) located at Building 816 that has been in service since 1983. There is a 1,000-gallon UST (SRN 56) located at Building 817 that has been in service since 1989.

An RI/FS Workplan that is currently under regulatory review has been prepared for this parcel by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 99(6)PS/PR CERFA Map Location 3,15

This parcel is associated with a former Military Police (MP) fueling station located northwest of Building 810. Two ASTs located behind Building 810 (SRNs 50 and 51) are presently located at this site. Both of these date to 1963, are used to store fuel oil, and have a 550-gallon capacity. A visual inspection during the 1995 EBS did not reveal any staining or stressed vegetation. However, interviews with base personnel revealed that the MPs fueled their vehicles in this area on a daily basis. Interviewees were certain that they had witnessed frequent spilling of petroleum products. This parcel is designated as Category 6.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 100(6)PS/PR/HS/HR

CERFA Map Location 3,14

This parcel is associated with Building 747. A visual inspection was attempted at this building; however, access to the building and the surrounding area was denied. The tank list shows that there is a 4,000-gallon fuel oil UST (SRN 44) associated with this building that has been in service since 1982. No release has been documented for this UST. An interview conducted during the mid-EBS meeting in January 1996 revealed that this building has been used for storage of battery acids and paints and that releases of petroleum product and solvents have occurred. In 1992, 10 gallons of fuel oil were reportedly spilled at this building. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9207312). This parcel is designated as Category 6.

BRAC Parcel Number and Label 101(6)PS/PR/HS/HR

CERFA Map Location 3,13

This parcel is associated with Building 718 and four of the previously recognized SWMUs (SEAD-32, SEAD-35, SEAD-41, and SEAD-61). Building 718 was a boiler house for the entire North Depot Area. Several documented releases were associated with this building and have been investigated, including a 3000-gallon fuel oil release that was reported in 1987 (NYSDEC Identification Number 8910830).

SEAD-32 consists of two waste oil storage USTs that were used to store small quantities of waste oil from 1982 to 1989. Results of limited sampling conducted by Engineering Science, Inc. detected elevated readings of TPH in soils in this area and in one groundwater sample. This SWMU was classified as a Low Priority AOC, and a mini-risk assessment has been recommended by Engineering Science, Inc.

SEAD-35 consists of three waste oil burning boilers inside of Building 718. This SWMU was previously classified as a No Action SWMU under CERCLA.

SEAD-41 is the boiler blowdown leach pit that is located in the vicinity of Building 718. The results of the limited sampling at this SWMU detected TPH in the soils. This SWMU was

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

classified as a Low Priority AOC, and remedial action has been recommended by Engineering Science, Inc.

SEAD-61 is a UST (SRN 38) that is used to store waste oil before burning in the adjacent boiler plant. It has a 10,000-gallon capacity and was installed in 1989. No releases from this UST have been documented. This SWMU was previously classified as a No Action SWMU under CERCLA.

Two other fuel oil USTs are associated with Building 718. SRN 194 has a 40,000-gallon capacity and has been in place since 1956. SRN 195 has a 20,000-gallon capacity and has been in place since 1978. No releases have been documented from either of these USTs.

In 1994, 3 ounces of an unspecified hazardous material were released inside of Building 718. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9313511).

This parcel is designated as Category 6.

BRAC Parcel Number and Label 102(6)PS/PR(P) CERFA Map Location 3,13

This parcel is associated with Buildings 716 and 717. Specifically, this is a 40,600-gallon fuel oil AST (SRN 188) that has been in service since 1956 and an associated fueling area. There has been no record of leaking or spilling of petroleum product at this location. However, based on a 1995 EBS visual inspection, the area directly around the fueling station exhibited staining. This particular tank has been out-of-service and empty since 1989. The berm drain has been kept open since that time. A visual inspection conducted by the Seneca Army Depot Activity Environmental Department staff on April 24, 1996 revealed only small puddles of water inside of the berm. This parcel is designated as Category 6.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 103(6)HR

CERFA Map Location 5,13

This parcel is associated with a miscellaneous components burial ground west of storage igloos A0101 and A0102. This area includes one of the previously recognized SWMUs (SEAD-63). Records revealed that miscellaneous components (i.e., classified parts) were buried in this area and have not yet been excavated. An ESI conducted by Engineering Science, Inc. at this SWMU revealed numerous burial pits that were shown to contain miscellaneous military components. The ESI results also indicated that the soils have been significantly impacted by PAHs, cadmium, and radionuclides, and that gross alpha and gross beta radiation are impacting surface water and groundwater quality. This SWMU has been classified as a Low Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

BRAC Parcel Number and Label 104(6)PR/HS/HR

CERFA Map Location 5,9

This parcel consists of an Open Burning Ground (SEAD-23), an Open Detonation Ground (SEAD-45), an explosive ordnance disposal area (SEAD-57), and a filled area at Building T-2110 (SEAD-70). The Open Burning Ground was used from the late 1960s to 1986 or 1987. Wastes burned here included explosives, contaminated trash, fuses containing lead, and projectiles containing TNT, Comp B, and Amatol. This SWMU was previously classified as a High Priority AOC and is currently an Active RI/FS.

The Open Detonation Ground was in use from 1941 to 1994. Large, obsolete, and unserviceable ammunition and components were destroyed here by detonation. An ESI conducted at this locality by Engineering Science, Inc. indicates that impacts to the surface soils and sediment from the release of heavy metals and nitroaromatic compounds, and to a lesser extent by SVOCs, have occurred at this site. Other analyses completed during the ESI indicated that various metals have impacted the groundwater at this site. This SWMU has been classified as a High Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

In 1994, 530 pounds of an unknown substance were reportedly spilled at the Open Burning Grounds. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9400993). In 1993, 80 gallons of diesel fuel were reportedly spilled at the Open Detonation Grounds. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9213247). In 1994, a fuel oil tank at the Open Detonation Grounds was reported as leaking; 100 gallons of fuel oil were released. All necessary remedial actions were taken, and the case is closed (NYSDEC Identification Number 9400104).

In 1995, 100 gallons of diesel fuel were released at Building 2134 because of a mechanical failure. The spill was cleaned up, and the case is closed (NYSDEC Identification Number 9413197).

The Open Burning/Open Detonation Grounds are currently RCRA facilities operating on interim status. Proper closure of these facilities will be required as part of the RCRA permit.

The explosive ordnance disposal area was used from 1941 to 1994. In the past, the area was used for open detonation, and it may have been used for the disposal of explosives. An ESI conducted at this SWMU by Engineering Science, Inc. indicated that impacts to the soils and groundwater from heavy metals have occurred at this site. This SWMU was classified as a Moderate Priority AOC, and an RI/FS has been recommended by Engineering Science, Inc.

The filled area east of Building T-2110 has previously been used to dispose of construction debris. The results of an ESI conducted at this SWMU by Engineering Science, Inc. indicated that the sediment in the wetland surrounding SEAD-70 and the soils that compose the landfill material have been impacted by moderate releases of PAHs (in the sediment) and arsenic (in the soil). This SWMU was classified as a Low Priority AOC, and a mini-risk assessment has been recommended by Engineering Science, Inc.

The area along both sides of the East-West Baseline Road and west of the North-South Baseline Road was used for live fire training activities. This training involved the demolition of vehicles and resulted in the release of significant quantities of petroleum products. This area is also likely to be contaminated by explosive compounds and metals.

Due to the inability to define the extent of activities associated with these areas, they were combined into a single parcel. This parcel is designated as Category 6.

BRAC Parcel Number and Label 105(6)HS/HR(P)

CERFA Map Location 15,13

This parcel is associated with an open ore storage pile. Records indicate that the ore stored at this location is aluminum oxide, which is considered a hazardous material. USATHAMA has concluded that the uncovered ore could migrate into the environment through air dispersal of dust particulate or transport of particulate through surface water runoff. At a minimum, remediation will be required that specifically includes removal of the ore. This parcel is designated as Category 6.

BRAC Parcel Number and Label 106(6)HR

CERFA Map Location 17,11

This parcel is associated with a debris area east of Booster Station 2131 and a possible DDT disposal area. This area corresponds with one of the previously identified SWMUs (SEAD-58). An ESI conducted at this site by Engineering Science, Inc. indicates that the soils, groundwater, and surface water have not been impacted by any of the constituents for which analyses were conducted. The sediment in the drainage swales in the area is the only medium that has been impacted by moderate releases of PAHs. This SWMU was classified as a Moderately Low Priority AOC, and a mini-risk assessment has been recommended by Engineering Science, Inc. This parcel is designated as Category 6.

5.1.7 Category 7 Parcels

Of the 10,634 acres that comprise Seneca Army Depot Activity BRAC property, 11 parcels, approximately 12 acres, are designated as Category 7. The Category 7 parcels are identified on Figure 5-1 and are summarized in the following sections.

BRAC Parcel Number and Label 107(7)

CERFA Map Location 30,10

This parcel is associated with a vented connex near Building 2311 at the Airfield. This connex was observed during the 1995 EBS visual inspection. The contents of this connex are unknown and, therefore, an accurate category designation could not be determined. This parcel is designated as Category 7.

BRAC Parcel Number and Label 108(7)HS(P)/HR(P)

CERFA Map Location 22,22

This parcel is associated with the reported former pest control shop in Building 335. This site is one of the previously recognized SWMUs (SEAD-68). No documented or visual evidence of a release has been discovered. However, NYSDEC has classified this area as an AOC and the Seneca Army Depot Activity agrees. This SWMU has been classified as a Low Priority AOC, and an RI/FS Scoping Plan is being developed. This parcel is designated as Category 7.

BRAC Parcel Number and Label 109(7)

CERFA Map Location 17,20

This parcel consists of earthen mounds that may be related to a small arms range that was reported in this area. It could not be determined if these mounds were in fact the location of a small arms range that was reported in an interview during the 1995 EBS. Therefore, an accurate category designation could not be determined. This parcel is designated as Category 7.

BRAC Parcel Number and Label 110(7)

CERFA Map Location 11,21

This parcel is associated with a suspect mound in the Duck Ponds Area that was observed during the 1995 EBS. The contents of this mound could not be determined; therefore, an accurate category designation could not be determined. This parcel is designated as Category 7.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 111(7)

CERFA Map Location 3,17

This parcel is associated with a suspect mound in the Duck Ponds Area that was observed during the 1995 EBS. The contents of this mound could not be determined; therefore, an accurate category designation could not be determined. This parcel is designated as Category 7.

BRAC Parcel Number and Label 112(7)

CERFA Map Location 2,17

This parcel is associated with a suspect mound in the Duck Ponds Area that was observed during the 1995 EBS. The contents of this mound could not be determined; therefore, an accurate category designation could not be determined. This parcel is designated as Category 7.

BRAC Parcel Number and Label 113(7)

CERFA Map Location 2,11

This parcel is associated with open land north of Building 715. A visual inspection of this area during the 1995 EBS revealed several suspect mounding areas and a rusty drum protruding from a mound of soil. No evidence of soil staining or groundwater contamination could be determined from the visual inspection. During the 1995 EBS, interviewees were asked if they had any knowledge of this area, but no one had any information. This parcel is designated as Category 7.

BRAC Parcel Number and Label 137(7)

CERFA Map Location 19,22

This parcel is associated with an area where it has been rumored that coal ash was disposed. Although corroboration of this activity was not found, the U.S. Army has agreed to conduct limited sampling in this area. This parcel has been designated as Category 7.

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

BRAC Parcel Number and Label 138(7)

CERFA Map Location 19,22

This parcel is associated with an area that was used for outdoor coal storage. This activity and location have been confirmed, and the U.S. Army has agreed to conduct limited sampling in this area. This parcel has been designated as Category 7.

BRAC Parcel Number and Label 139(7)

CERFA Map Location 2,14

This parcel is associated with an area where it has been rumored that empty DDT cans were disposed. Although corroboration of this activity was not found, the U.S. Army has agreed to conduct a geophysical study in this area and, if warranted, limited sampling. This parcel has been designated as Category 7.

BRAC Parcel Number and Label 140(7)

CERFA Map Location 2,12

This parcel is associated with a hill located north of Post 3 it has been rumored that drains were disposed. Although corroboration of this activity was not found, the U.S. Army has agreed to conduct a geophysical study in this area and, if warranted by the results of the geophysical study, limited sampling. This parcel has been designated as Category 7.

5.1.8 Qualified Parcels

In determining the qualified parcels, Woodward-Clyde observed the following guidelines:

• If a complete asbestos survey/reinspection has not been conducted, then buildings constructed prior to 1985 were assumed to contain ACM. An "A(P)" for the possible presence of asbestos was used to qualify the parcel. Where buildings had been surveyed, and ACM was identified, then these buildings were designated with "A."

- If a complete LBP survey has not been conducted, then buildings and structures constructed prior to 1978 were assumed to contain LBP. An "L(P)" for the possible presence of LBP was used to qualify the parcel. Where buildings had been surveyed, and LBP was identified as being present, then these buildings were designated "L."
- A distinction is made between the presence of PCBs within equipment, such as
 transformers, that have not leaked and PCBs in soil from leaking equipment. PCBs
 in soil from leaking equipment is considered a CERCLA issue, while non-leaking,
 out-of-service equipment with greater than 50 ppm PCBs qualified the parcel with
 the designation "P."
- Buildings with radon levels of 4.0 pCi/L or greater were designated "R," while
 those with radon less than 4.0 pCi/L were below mitigation levels and received no
 designation. Buildings for which there has been no radon survey remain
 unqualified.
- Buildings possibly containing UXO stored for use or disposal and areas containing possible surface or buried UXO based on previous testing, dismantling, or deactivation of UXO were designated "X(P)." Buildings and areas where UXO was stored or disposed of were designated "X." Also, locations of former firing ranges were UXO-qualified and designated "X."
- Buildings and areas where radioactive materials were stored were designated "RD."

There are 917 parcels, approximately 1,804.58 acres, that are identified as qualified parcels as described in Table 5-1b. On the CERFA map, Figure 5-1, qualified buildings are keyed by building numbers, and areas of land that are qualified are shown with a unique qualified parcel label. Tables 5-3 and 5-4 (following Section Five) elaborate upon potential UXO and radionuclide hazards identified at the Seneca Army Depot Activity. In addition to buildings, several areas of open land were qualified. These are described in the following sections.

BRAC Parcel Number and Label 114(2)Q-X

CERFA Map Location 30,11

This parcel is associated with a firing range located in the area to the east of Building 2302 at the Airfield. This area was identified in a visual inspection and interview during the 1995 EBS.

BRAC Parcel Number and Label 115Q-X

CERFA Map Location 29,11

This parcel is associated with a former trap/skeet range located to the east of Building 2301 at the Airfield. This area was identified in a visual inspection and interview during the 1995 EBS.

BRAC Parcel Number and Label 116Q-X

CERFA Map Location 32,16

This parcel corresponds with BRAC Parcel 57(6)PS/PR/HR. Two non-CERCLA issues pertain to this parcel. First, at the eastern edge of the parcel was the former Munitions Washout Plant. Records indicate that explosive compounds were leached into the soils outside of the plant. Second, an interview conducted during the 1995 EBS site inspection revealed that munitions may have been buried in the northeast portion of this parcel.

BRAC Parcel Number and Label 117Q-X

CERFA Map Location 30,18

This parcel is associated with an area that is suspected to be an ammunition burial/disposal area. Interviews conducted during the 1995 EBS identified that burial of ammunition took place in this general location.

BRAC Parcel Number and Label 118Q-RD

CERFA Map Location 29,19

This parcel corresponds with BRAC Parcel 49(5)HS/HR. It consists of a series of 11 storage igloos and the surrounding area. These igloos were used to store pitchblende ore.

BRAC Parcel Number and Label 119Q-X

CERFA Map Location 32,20

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

This parcel is believed to be the location of a small arms range. Interviews during the 1995 EBS indicated that this area had been used as a small arms range. A visual inspection of the area revealed a 250-foot long accurate berm with a dirt track road leading to it.

BRAC Parcel Number and Label 120Q-X

CERFA Map Location 32,23

This parcel corresponds with BRAC Parcel 60(6)HR. This area was a material proof and surveillance test area located west of Building 616.

BRAC Parcel Number and Label 121Q-X

CERFA Map Location 30,22

This parcel corresponds with BRAC Parcel 61(6)HR. This area was a material proof and surveillance test area on Brady Road.

BRAC Parcel Number and Label 122Q-X

CERFA Map Location 11,21

This parcel is associated with a small arms range that was used for testing firing tracers and 3.5-inch rockets. This area corresponds with one of the previously identified SWMUs (SEAD-46). This SWMU was classified as a Low Priority AOC, and a RI/FS Scoping Plan is being developed by Engineering Science, Inc.

BRAC Parcel Number and Label 123Q-RD

CERFA Map Location 4,16

This parcel corresponds with BRAC Parcel 98(6)PS/HS/HR. This area was used as a part of the special weapons mission that was formerly at the depot. Although the nature of this mission is classified, it is known that several radioisotopes were stored in buildings within this area.

BRAC Parcel Number and Label 124Q-RD

CERFA Map Location 3,17

SECTIONFIVE

ENVIRONMENTAL CONDITION OF THE PROPERTY AREA

This parcel corresponds with BRAC Parcel 53(5)HR. This area was used for the burial of radioactive materials.

BRAC Parcel Number and Label 125Q-X

CERFA Map Location 2,13

This parcel is associated with Building 744. Building 744 was a physical activities center or health club facility. Interviews conducted during the 1995 EBS revealed that a shooting range existed in the basement of the facility. These interviews also reported that the shooting range was dismantled, but no records could be found documenting the cleaning process.

BRAC Parcel Number and Label 126Q-RD

CERFA Map Location 5,13

This parcel corresponds with BRAC Parcel 103(6)HR. This area was used for the burial of miscellaneous classified components.

BRAC Parcel Number and Label 127Q-X

CERFA Map Location 5,8

This parcel corresponds with BRAC Parcel 104(6)PR/HS/HR. This area includes the Open Burning/Open Detonation Grounds and the live fire training area along East-West Baseline Road.

BRAC Parcel Number and Label 128Q-X

CERFA Map Location 18,11

This parcel corresponds with BRAC Parcel 55(6)PR(P)/HR. This area is the abandoned powder burning pit. Black powder, M10 and M6 solid propellants, and probably explosive-contaminated trash were disposed of in this area.

Notes:

* BRAC parcel label definitions are as follows:

Qualified parcel label definitions are as follows:

PS = petroleum storage

PR = petroleum release or disposal

HS = hazardous substance storage

HR = hazardous substance release or disposal

A = asbestos containing material

L = lead-based paint

P = polychlorinated biphenyls

R = radon

X = UXO and/or ordnance fragments

RD = radionuclides

(P) = possible (unverified)

Page 10 of 10

^b Acreage figures are approximate; they have been calculated using AutoCad Release 12.

^c EBS Source of Evidence numbers refer to documents listed in Table 2-1 of this report.

Notes:

^a BRAC parcel label definitions are as follows:

PS = petroleum storage

PR = petroleum release or disposal

HS = hazardous substance storage

HR = hazardous substance release or disposal

Qualified parcel label definitions are as follows:

A = asbestos containing material

L = lead-based paint

P = polychlorinated biphenyls

R = radon

X = UXO and/or ordnance fragments

RD = radionuclides

(P) = possible (unverified)

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

Copyright 2018 by Environmental Data Resources, Inc. All rights reserved. Reproduction in any media or format, in whole or in part, of any report or map of Environmental Data Resources, Inc., or its affiliates, is prohibited without prior written permission.

Summary Details:

Conditions at proposal July 14, 1989): The Seneca Army Depot encompasses more than 10,000 acres in Seneca County, New York. It lies between Cayuga and Seneca Lakes in the Finger Lakes region and abuts the town of Romulus. The Army has stored and disposed of military explosives at the facility since its

inception in 1941. Seneca Army Depot is participating in the

Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean

up contamination from ha ardous materials. During preliminary

MAP FINDINGS Map ID

Direction Distance Elevation

Site Database(s) **EPA ID Number**

SENECA ARMY DEPOT ACTIVITY (Continued)

1000200707

EDR ID Number

investigations, the Army identified a number of potentially contaminated areas, including an unlined 13-acre landfill in the west-centralportion of the depot, where solid waste and incinerator ash were disposed of intermittently for 30 years during 1941-79; two incinerator pits adjacent to the landfill, where refuse was burned at least once a week during 1941-74; a 90-acre open burning/detonation area in the northwest portion of the depot, where explosives and related wastes have been burned and detonated during the past 30 years; and the APE-1236 Deactivation Furnace in the east-central portion of the depot, where small arms are destroyed. Monitoring wells on the depot downgradient of the old landfill contain elevated concentrations of trans-1,2-dichloroethylene and trichloroethylene, according to tests conducted in 1987 by an Army contractor. An estimated 1,350 people obtain drinking water from private wells within 3 miles of the depot. Status August 30, 1990): EPA, the State, and the Army are negotiating an Interagency Agreement under CERCLA Section 120 to cover future activities at the depot. The Army plans to conduct a remedial investigation/feasibility study to determine the type and extent of contamination at the site and identify alternatives for remedial action. Field work is scheduled to start in the fallof 1990.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D008
Waste name: LEAD

Waste code: D018
Waste name: BENZENE

Waste code: D039

. Waste name: TETRACHLOROETHYLENE

Waste code: D040

Waste name: TRICHLOROETHYLENE

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US Base Realignment and Closure (BRAC) is a process used to close excess military installations and realign the total asset inventory in order to save money on operations and maintenance.

FEDERAL FACILITY HAZARDOUS WASTE DOCKET

SUPERFUND NPL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting

requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RADINFO (Radiation Information Database) contains basic information about certain facilities that the U.S. Environmental Protection Agency (EPA) regulates for radiation and radioactivity. The regulations that govern radiation across the federal government are complex, and, therefore, RADINFO may not include every facility you might expect to find.

Site Description:

The Seneca Army Depot (SEDA) previously occupied approximately 10,600 acres of land located in the Towns of Varick and Romulus in Seneca County, New York. The former military facility was owned by the U.S. Government and operated by the Army between 1941 and approximately 2000, when the SEDA military mission ceased. The SEDA s historic military mission included receipt, storage, distribution, maintenance, and demilitarization of conventional ammunition, explosives and special weapons. The SEDA is located in an uplands area, which forms a divide separating two of the New York Finger Lakes, Cayuga Lake on the east and Seneca Lake on the west. The elevation of the facility is approximately 600 feet (ft.) above Mean Sea Level (MSL). On July 14, 1989, the USEPA proposed the SEDA for inclusion on the National Priorities List (NPL). The USEPA recommendation was approved and finalized on August 30, 1990, when the SEDA was listed in Group 14 of the Federal Facilities portion of the NPL. Once the SEDA was listed on the NPL, the Army, the USEPA, and NYSDEC identified 57 solid waste management units (SWMUs) where historic data or information suggested, or evidence existed to support, that hazardous materials or hazardous wastes had been handled and may have been released and migrated into the environment. Each of these sites was identified in the Federal Facilities Agreement (FFA) signed by the three parties in 1993 (USEPA, NYSDEC, and Army, 1993). This list of SWMUs was subsequently expanded to include 72 sites when the Army completed the SWMU Classification Report, Final (Parsons, 1994), which was required under the terms of the FFA. The SEDA was a generator and Treatment, Storage and Disposal Facility (TSDF) and thus, subject to regulation under the Resource Conservation and Recovery Act (RCRA). Under this permit system, corrective action is required at all SWMUs, as needed. Remedial goals are the same for CERCLA and RCRA; thus, when the 72 SWMUs were classified in the SWMU Classification Report, Final (Parsons, 1994), the Army recommended that they be listed either as areas requiring NA or as Areas of Concern (AOCs). SWMUs listed as AOCs in the SWMU Classification Report, Final (Parsons, 1994) were scheduled for further investigations based upon data and potential risks to the environment. In 1995, the SEDA was designated for closure under the Department of Defense s (DoD s) Base Realignment and Closure (BRAC) process. With the SEDA's inclusion on the BRAC list, the Army's emphasis expanded from expediting necessary investigations and remedial actions at prioritized sites to include the release of non-affected portions of the Depot to the surrounding community for their reuse for non-military purposes (i.e., industrial, municipal, and residential). Since the inclusion of the SEDA in the BRAC program, approximately 8,000 acres have been released to the community. An additional 250 acres of land have been transferred to the U.S. Coast Guard for continued operation of a LORAN(LOng RAange Navigation) Station (which was recently closed by the Coast Guard). Groundwater contamination in excess of drinking water standards is evident at limited portions of the site, including downgradient of the Ash Landfill. Remediation of the Ash Landfill plume is ongoing. Soil contamination, primarily with metals, has been found at a larger numbers of areas of concern at the site. Numerous Interim Remedial Measures have been undertaken by the Army to remove contaminated

S100124509

EDR ID Number

soils and, in most cases, these actions have constituted the final

remedy at these areas of concern.

Health Problem: The Seneca Army Depot is fenced and there is 24-hour security

limiting the potential for public exposure to site-related

contaminants. All current buildings on the Seneca Army Depot are supplied with public water so exposures to contaminated groundwater on-site are not expected. Quarterly water samples taken from residential wells downgradient from the Ash Landfill have not shown site-related contamination. The three parcels transferred to date (prison, housing, and north end) have been determined to pose no unacceptable risk to reusers. NYSDOH staff will continue to evaluate the potential for human health impacts from contamination at the Seneca Army Depot paying special attention to those areas to be

transferred from Department of Defense ownership.

military mission included receipt, storage, distribution,

maintenance, and demilitarization of conventional ammunition, explosives and special weapons. The SEDA is located in an uplands area, which forms a divide separating two of the New York Finger Lakes, Cayuga Lake on the east and Seneca Lake on the west. The elevation of the facility is approximately 600 feet (ft.) above Mean Sea Level (MSL). On July 14, 1989, the USEPA proposed the SEDA for inclusion on the National Priorities List (NPL). The USEPA

recommendation was approved and finalized on August 30, 1990, when the SEDA was listed in Group 14 of the Federal Facilities portion of the NPL. Once the SEDA was listed on the NPL, the Army, the USEPA,

and NYSDEC identified 57 solid waste management units (SWMUs) where historic data or information suggested, or evidence existed to support, that hazardous materials or hazardous wastes had been handled and may have been released and migrated into the environment. Each of these sites was identified in the Federal Facilities

Agreement (FFA) signed by the three parties in 1993 (USEPA, NYSDEC,

and Army, 1993). This list of SWMUs was subsequently expanded to include 72 sites when the Army completed the SWMU Classification Report, Final (Parsons, 1994), which was required under the terms of the FFA. The SEDA was a generator and Treatment, Storage and Disposal Facility (TSDF) and thus, subject to regulation under the Resource

Conservation and Recovery Act (RCRA). Under this permit system, corrective action is required at all SWMUs, as needed. Remedial goals are the same for CERCLA and RCRA; thus, when the 72 SWMUs were classified in the SWMU Classification Report, Final (Parsons, 1994), the Army recommended that they be listed either as areas requiring NA or as Areas of Concern (AOCs). SWMUs listed as AOCs in the SWMU Classification Report, Final (Parsons, 1994) were scheduled for

Direction Distance Elevation

Site Database(s) EPA ID Number

SENECA ARMY DEPOT (Continued)

EDR ID Number

further investigations based upon data and potential risks to the environment. In 1995, the SEDA was designated for closure under the Department of Defense s (DoD s) Base Realignment and Closure (BRAC) process. With the SEDA s inclusion on the BRAC list, the Army s emphasis expanded from expediting necessary investigations and remedial actions at prioritized sites to include the release of non-affected portions of the Depot to the surrounding community for their reuse for non-military purposes (i.e., industrial, municipal, and residential). Since the inclusion of the SEDA in the BRAC program, approximately 8,000 acres have been released to the community. An additional 250 acres of land have been transferred to the U.S. Coast Guard for continued operation of a LORAN(LOng RAange Navigation) Station (which was recently closed by the Coast Guard).

Env Problem:

Groundwater contamination in excess of drinking water standards is evident at limited portions of the site, including downgradient of the Ash Landfill. Remediation of the Ash Landfill plume is ongoing. Soil contamination, primarily with metals, has been found at a larger numbers of areas of concern at the site. Numerous Interim Remedial Measures have been undertaken by the Army to remove contaminated soils and, in most cases, these actions have constituted the final remedy at these areas of concern.

Health Problem:

The Seneca Army Depot is fenced and there is 24-hour security limiting the potential for public exposure to site-related contaminants. All current buildings on the Seneca Army Depot are supplied with public water so exposures to contaminated groundwater on-site are not expected. Quarterly water samples taken from residential wells downgradient from the Ash Landfill have not shown site-related contamination. The three parcels transferred to date (prison, housing, and north end) have been determined to pose no unacceptable risk to reusers. NYSDOH staff will continue to evaluate the potential for human health impacts from contamination at the Seneca Army Depot paying special attention to those areas to be transferred from Department of Defense ownership.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

> SR 07/09/01 CLOSURE REPORT DOCUMENTED CLOSURE OF TWO TANK PITS; AREA ONE WAS RELATED TO THE REMOVAL OF A 10000 GALLON WASTE OIL TANK (UST), CONFIRMATORY SAMPLES INDICATED ONE EXCEEDANCE OF STARS MEMO #1

FOR SOIL (N-BUTYLBENZENE AT 100 PPB VS. 100 PPB STARS VALUE).

GROUNDWATER SAMPLE FROM EXCAVATION DOCUMENTED SEVERAL PETROLEUM CONSTITUENTS, BUT AT RELATIVELY MINOR CONCENTRATIONS. THERE ARE NO NEARBY RECEPTORS, AND BASED ON CLEAN SOIL SAMPLES, FURTHER ACTIONS WERE NOT REQUIRED. TAGM 4046 NUMBERS WERE NOT CONTRAVENED AREA 2 WAS RELATED TO THE REMOVAL OF A 20000 GALLON AND 40000 GALLON #6 FUEL OIL TANKS. AGAIN GROUNDWATER CONTAMINATION WAS DOCUMENTED AT LOW LEVELS, NOT REQUIRING A CLEANUP. SOIL ANALYTICAL RESULTS INDICATED SEVERAL EXCEEDANCES OF STARS CRITERIA FOR TOTAL CONCENTRATIONS, HOWEVER SUBSEQUENT TCLP ANALYSES INDICATED ONLY ONE EXCEEDANCE OF STARS (70 PPB FOR PHENANTHRENE). THE SOIL RESULTS DID INDICATE EXCEEDANCES OF SEVERAL HUMAN HEALTH GUIDANCE VALUES, AND LETTER (DATED 11/29/00) WAS SENT REQUESTING EXCAVATION OF SOILS IN THE AREAS IN QUESTION TO ELIMINATE POTENTIAL EXPOSURE CONCERNS. ON MAY 18,01 LETTER RECEIVED FROM SENECA CO. IDA WHICH PROPOSED FILLING IN EXCAVATIONS WITHOUT FURTHER SOIL REMOVAL. THE STATE HEALTH DEPARTMENT WAS IN AGREEMENT WITH IDA PROPOSAL, AND LETTER WAS SENT CLOSING THE SPILL. NO FURTHER ACTIONS NECESSARY. 04/29/10: PAPER FILE REMOVED PER FILE RETENTION

POLICY. "

Remarks: "SAMPLE RESULTS CAME BACK AFTER REMOVING A #6 FUEL OIL UNDERGROUND

TANK, EXCEEDING VALUES, BOTH IN THE SOIL AND IN THE GROUNDWATER. '

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

SR 07/07/2000 JM SPOKE TO TOM GRASEK. THE TANK REMOVED WAS 500

GALLONS AND WAS IN GOOD CONDITION. CLEMETT, THE CONTRACTOR REMOVING THE TANK, ATTEPMTED TO DIG OUT OF THE CONTAMINATION. HOWEVER, AT 15 FEET PETROLEUM CONTAMINATION WAS STILL PRESENT. A LARGER BACKHOE WILL BE NEEDED TO DIG FURTHER AND WILL BE AVAILABLE IN ABOUT TWO WEEKS. THEREFORE, THE EXCAVATION WAS LEFT OPEN AND A FENCE PLACED AROUND THE

HOLE. IN THE EXCAVTION THERE WERE OLD FUEL LINES PRESENT WHICH MAY

INDICATE A PREVIOUS TANK AND POSSIBLY THE SOURCE OF THE

CONTAMINATION. 08/15/00 - SR CONTACTED TOM GRASEK OF SEDA, ADDITIONAL EXCAVATION OF IMPACTED SOILS WAS PERFORMED, TOTAL SOIL REMOVED ESTIMATED AT 200 CUBIC YARDS, DEPTH OF EXCAVATION APPROXIMATELY 20 FEET. CONFIRMATORY SAMPLES TAKEN AND TO BE FORWARDED. SOIL TO BE BURNED ON SITE, POSSIBLY STARTING NEXT WEEK. 01/24/03 DISPOSAL RECEIPTS RECEIVED FOR IMPACTED SOIL. NFA. CLOSE. 02/14/2013: PAPER

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

SR 8/5/99 MZ TELCON WITH TOM GRASEK WHO STATED THAT THE CONTRACTOR'S (MARTIN DISPOSAL SERVICES) FRONT END LOADER RUPTURED A LINE. THE LINE HAS NOT BEEN REPAIRED YET, BUT SHOULD BE BY THE END OF TODAY OR EARLY TOMORROW. BECAUSE OF THIS, THE LOADER WILL NOT BE MOVED. THE SPILL WAS TO AN OLD ASPHALT SURFACE. SENECA ARMY DEPOT CLEANED UP ANY OIL THAT WAS OBSERVED AROUND/ADJACENT TO THE LOADER. THIS MATERIAL WAS EXCAVATED AND STAGED ON AND COVERED WITH PLASTIC. BOOMS HAVE BEEN DEPLOYED AROUND THE LOADER AND THE AREA THAT IS IMPACTED (NOT CLEANED UP YET) IS COVERED WITH PLASTIC. GRASEK STATED THAT MARTIN DISPOSAL SERVICES WILL BE HIRING A CONTRACTOR TO COMPLETE THE CLEANUP ONCE THE LOADER IS REPAIRED AND MOVED. MARTIN DISPOSAL IS RESPONSIBLE FOR PROPER DISPOSAL OF CONTAMINATION. 03/15/00 - CLEANUP COMPLETED, NO

ACTION WAS NEEDED BY SPILLS. CLOSE."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead DEC Field was

SR 06/30/03 - APPROXIMATELY 135 CUBIC YARDS OF CONTAMINATED SOILS EXCAVATED IN MARCH 03 FROM ALONG SOUTH AND SOUTHWEST SIDE OF BLDG. 117. SOIL DISPOSED OF AT ONTARIO CO. LANDFILL. CONFIRMATORY SOIL SAMPLES INDICATE SOME EXCEEDANCES OF TAGM 4046 FOR SEMI-VOLATILES, ESPECIALLY ON WEST WALL AND BOTTOM OF EXCAVATION. SOILS WERE

EXCAVATED TO TOP OF BEDROCK (SHALE) AT 5 TO 6 FEET BELOW SURFACE. THE FOLLOWING CONSTITUENTS WERE FOUND AT CONCENTRATIONS ABOVE TAGM VALUES: BENZO (A) ANTHRACENE, CHYSENE, BENZO (B) FLOURANTHENE, BENZO (K) FLOURANTHENE, BENZO (A) PYRENE, INDENO (1,2,3-CD) PYRENE, AND

DIBENZO (A,H) ANTHRACENE. DUE TO SITE CONSTRAINTS (BUILDING, DEPTH TO ROCK) AND LACK OF NEARBY RECEPTORS, ADDITIONAL REMEDIAL ACTIONS WILL

NOT BE REQUIRED. CLOSE SPILL."

Remarks: "TANK CLOSURE REPORT SUBMITTED BY EP&S, DOCUMENTS EXCEEDANCES OF

STARS FOR SEMI-VOLATILES, TOTAL CONCENTRATION OF 136.5 PPM. ANALYSIS WAS FROM SOIL SAMPLE COLLECTED AFTER REMOVAL OF A DOUBLE-WALLED FIBERGLASS WASTE OIL UST. NO CONTAMINATION WAS EVIDENT DURING THE

REMOVAL WORK. SR FOLLOWING UP."

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

HIST SPILLS: SPILLS Database

This database contains records of chemical and petroleum spill incidents. Under State law, petroleum and hazardous chemical spills that can impact the waters of the state must be reported by the spiller (and, in some cases, by anyone who has knowledge of the spills). In 2002, the Department of Environmental Conservation stopped providing updates to its original Spills Information Database. This database includes fields that are no longer available from the NYDEC as of January 1, 2002. Current information may be found in the NY SPILLS database. Department of Environmental Conservation.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary

and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Day Care Providers Source: Department of Health Telephone: 212-676-2444

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Northwest Map: 5937503 GENEVA SOUTH, NY

Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

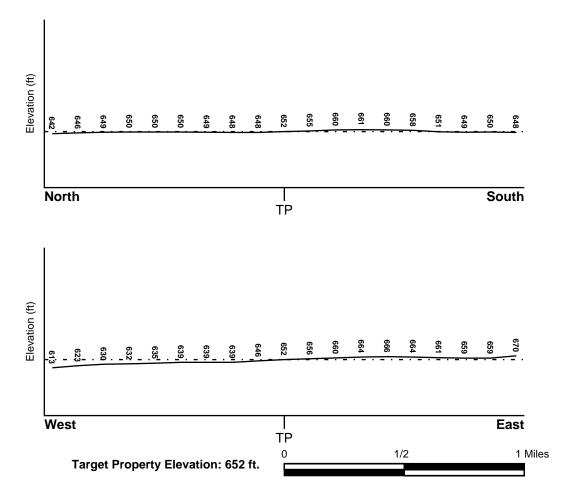

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property FEMA Source Type

Not Reported

Additional Panels in search area: FEMA Source Type

Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

ROMULUS YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION
MAP ID FROM TP GROUNDWATER FLOW
Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Darien

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Somewhat poorly drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 23 inches

Soil Layer Information							
	Boundary		Soil Texture Class	Classification		Saturated hydraulic	
Layer	Upper Lower			AASHTO Group	Unified Soil	conductivity micro m/sec	Con Roadilon
1	0 inches	9 inches	silt loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 14 Min: 4	Max: 7.3 Min: 5.6
2	9 inches	24 inches	silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 7.3 Min: 6.1
3	24 inches	29 inches	gravelly silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 4 Min: 1.4	Max: 8.4 Min: 7.4
4	29 inches	59 inches	channery silty clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 1.4 Min: 0.42	Max: 8.4 Min: 7.4

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Freshwater Wetlands

Telephone: 518-402-8961

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Telephone: 518-402-8072

These files contain records, in the database, of wells that have been drilled.

RADON

State Database: NY Radon Source: Department of Health Telephone: 518-402-7556 Radon Test Results

Area Radon Information Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency

(USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor

radon levels.

Summary Details:

Conditions at proposal July 14, 1989): The Seneca Army Depot encompasses more than 10,000 acres in Seneca County, New York. It lies between Cayuga and Seneca Lakes in the Finger Lakes region and abuts the town of Romulus. The Army has stored and disposed of military explosives at the facility since its

inception in 1941. Seneca Army Depot is participating in the

Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean

up contamination from ha ardous materials. During preliminary

MAP FINDINGS Map ID

Direction Distance Elevation

Site Database(s) **EPA ID Number**

SENECA ARMY DEPOT ACTIVITY (Continued)

1000200707

EDR ID Number

investigations, the Army identified a number of potentially contaminated areas, including an unlined 13-acre landfill in the west-centralportion of the depot, where solid waste and incinerator ash were disposed of intermittently for 30 years during 1941-79; two incinerator pits adjacent to the landfill, where refuse was burned at least once a week during 1941-74; a 90-acre open burning/detonation area in the northwest portion of the depot, where explosives and related wastes have been burned and detonated during the past 30 years; and the APE-1236 Deactivation Furnace in the east-central portion of the depot, where small arms are destroyed. Monitoring wells on the depot downgradient of the old landfill contain elevated concentrations of trans-1,2-dichloroethylene and trichloroethylene, according to tests conducted in 1987 by an Army contractor. An estimated 1,350 people obtain drinking water from private wells within 3 miles of the depot. Status August 30, 1990): EPA, the State, and the Army are negotiating an Interagency Agreement under CERCLA Section 120 to cover future activitiesat the depot. The Army plans to conduct a remedial investigation/feasibility study to determine the type and extent of contamination at the site and identify alternatives for remedial action. Field work is scheduled to start in the fallof 1990.

. Waste code: D001

. Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US Base Realignment and Closure (BRAC) is a process used to close excess military installations and realign the total asset inventory in order to save money on operations and maintenance.

FEDERAL FACILITY HAZARDOUS WASTE DOCKET

SUPERFUND NPL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting

requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RADINFO (Radiation Information Database) contains basic information about certain facilities that the U.S. Environmental Protection Agency (EPA) regulates for radiation and radioactivity. The regulations that govern radiation across the federal government are complex, and, therefore, RADINFO may not include every facility you might expect to find.

> acres of land located in the Towns of Varick and Romulus in Seneca County, New York. The former military facility was owned by the U.S. Government and operated by the Army between 1941 and approximately

The Seneca Army Depot (SEDA) previously occupied approximately 10,600

2000, when the SEDA military mission ceased. The SEDA s historic military mission included receipt, storage, distribution,

maintenance, and demilitarization of conventional ammunition, explosives and special weapons. The SEDA is located in an uplands area, which forms a divide separating two of the New York Finger Lakes, Cayuga Lake on the east and Seneca Lake on the west. The elevation of the facility is approximately 600 feet (ft.) above Mean Sea Level (MSL). On July 14, 1989, the USEPA proposed the SEDA for inclusion on the National Priorities List (NPL). The USEPA recommendation was approved and finalized on August 30, 1990, when the SEDA was listed in Group 14 of the Federal Facilities portion of the NPL. Once the SEDA was listed on the NPL, the Army, the USEPA, and NYSDEC identified 57 solid waste management units (SWMUs) where historic data or information suggested, or evidence existed to support, that hazardous materials or hazardous wastes had been handled and may have been released and migrated into the environment. Each of these sites was identified in the Federal Facilities

Agreement (FFA) signed by the three parties in 1993 (USEPA, NYSDEC, and Army, 1993). This list of SWMUs was subsequently expanded to include 72 sites when the Army completed the SWMU Classification Report, Final (Parsons, 1994), which was required under the terms of the FFA. The SEDA was a generator and Treatment, Storage and Disposal Facility (TSDF) and thus, subject to regulation under the Resource Conservation and Recovery Act (RCRA). Under this permit system,

corrective action is required at all SWMUs, as needed. Remedial goals are the same for CERCLA and RCRA; thus, when the 72 SWMUs were classified in the SWMU Classification Report, Final (Parsons, 1994), the Army recommended that they be listed either as areas requiring NA or as Areas of Concern (AOCs). SWMUs listed as AOCs in the SWMU Classification Report, Final (Parsons, 1994) were scheduled for further investigations based upon data and potential risks to the environment. In 1995, the SEDA was designated for closure under the Department of Defense s (DoD s) Base Realignment and Closure (BRAC) process. With the SEDA s inclusion on the BRAC list, the Army s emphasis expanded from expediting necessary investigations and remedial actions at prioritized sites to include the release of non-affected portions of the Depot to the surrounding community for

their reuse for non-military purposes (i.e., industrial, municipal, and residential). Since the inclusion of the SEDA in the BRAC

EDR ID Number

program, approximately 8,000 acres have been released to the community. An additional 250 acres of land have been transferred to the U.S. Coast Guard for continued operation of a LORAN(LOng RAange Navigation) Station (which was recently closed by the Coast Guard). Groundwater contamination in excess of drinking water standards is

evident at limited portions of the site, including downgradient of the Ash Landfill. Remediation of the Ash Landfill plume is ongoing. Soil contamination, primarily with metals, has been found at a larger numbers of areas of concern at the site. Numerous Interim Remedial Measures have been undertaken by the Army to remove contaminated soils and, in most cases, these actions have constituted the final

remedy at these areas of concern.

Health Problem: The Seneca Army Depot is fenced and there is 24-hour security

limiting the potential for public exposure to site-related

contaminants. All current buildings on the Seneca Army Depot are supplied with public water so exposures to contaminated groundwater on-site are not expected. Quarterly water samples taken from residential wells downgradient from the Ash Landfill have not shown site-related contamination. The three parcels transferred to date (prison, housing, and north end) have been determined to pose no unacceptable risk to reusers. NYSDOH staff will continue to evaluate the potential for human health impacts from contamination at the Seneca Army Depot paying special attention to those areas to be

transferred from Department of Defense ownership.

Site Description: The Seneca Army Depot (SEDA) previously occupied approximately 10,600

acres of land located in the Towns of Varick and Romulus in Seneca County, New York. The former military facility was owned by the U.S. Government and operated by the Army between 1941 and approximately 2000, when the SEDA military mission ceased. The SEDA s historic

military mission included receipt, storage, distribution,

maintenance, and demilitarization of conventional ammunition, explosives and special weapons. The SEDA is located in an uplands area, which forms a divide separating two of the New York Finger Lakes, Cayuga Lake on the east and Seneca Lake on the west. The elevation of the facility is approximately 600 feet (ft.) above Mean Sea Level (MSL). On July 14, 1989, the USEPA proposed the SEDA for

inclusion on the National Priorities List (NPL). The USEPA

recommendation was approved and finalized on August 30, 1990, when the SEDA was listed in Group 14 of the Federal Facilities portion of Map ID Direction Distance Elevation MAP FINDINGS

EDR ID Number

the NPL. Once the SEDA was listed on the NPL, the Army, the USEPA, and NYSDEC identified 57 solid waste management units (SWMUs) where historic data or information suggested, or evidence existed to support, that hazardous materials or hazardous wastes had been handled and may have been released and migrated into the environment. Each of these sites was identified in the Federal Facilities Agreement (FFA) signed by the three parties in 1993 (USEPA, NYSDEC, and Army, 1993). This list of SWMUs was subsequently expanded to include 72 sites when the Army completed the SWMU Classification Report, Final (Parsons, 1994), which was required under the terms of the FFA. The SEDA was a generator and Treatment, Storage and Disposal Facility (TSDF) and thus, subject to regulation under the Resource Conservation and Recovery Act (RCRA). Under this permit system, corrective action is required at all SWMUs, as needed. Remedial goals are the same for CERCLA and RCRA; thus, when the 72 SWMUs were classified in the SWMU Classification Report, Final (Parsons, 1994), the Army recommended that they be listed either as areas requiring NA or as Areas of Concern (AOCs). SWMUs listed as AOCs in the SWMU Classification Report, Final (Parsons, 1994) were scheduled for further investigations based upon data and potential risks to the environment. In 1995, the SEDA was designated for closure under the Department of Defense s (DoD s) Base Realignment and Closure (BRAC) process. With the SEDA's inclusion on the BRAC list, the Army's emphasis expanded from expediting necessary investigations and remedial actions at prioritized sites to include the release of non-affected portions of the Depot to the surrounding community for their reuse for non-military purposes (i.e., industrial, municipal, and residential). Since the inclusion of the SEDA in the BRAC program, approximately 8,000 acres have been released to the community. An additional 250 acres of land have been transferred to the U.S. Coast Guard for continued operation of a LORAN(LOng RAange Navigation) Station (which was recently closed by the Coast Guard). Groundwater contamination in excess of drinking water standards is

Env Problem:

Groundwater contamination in excess of drinking water standards is evident at limited portions of the site, including downgradient of the Ash Landfill. Remediation of the Ash Landfill plume is ongoing. Soil contamination, primarily with metals, has been found at a larger numbers of areas of concern at the site. Numerous Interim Remedial Measures have been undertaken by the Army to remove contaminated soils and, in most cases, these actions have constituted the final remedy at these areas of concern.

Health Problem:

The Seneca Army Depot is fenced and there is 24-hour security limiting the potential for public exposure to site-related contaminants. All current buildings on the Seneca Army Depot are supplied with public water so exposures to contaminated groundwater on-site are not expected. Quarterly water samples taken from residential wells downgradient from the Ash Landfill have not shown site-related contamination. The three parcels transferred to date (prison, housing, and north end) have been determined to pose no unacceptable risk to reusers. NYSDOH staff will continue to evaluate the potential for human health impacts from contamination at the Seneca Army Depot paying special attention to those areas to be transferred from Department of Defense ownership.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

SR 07/09/01 CLOSURE REPORT DOCUMENTED CLOSURE OF TWO TANK PITS; AREA ONE WAS RELATED TO THE REMOVAL OF A 10000 GALLON WASTE OIL TANK (UST), CONFIRMATORY SAMPLES INDICATED ONE EXCEEDANCE OF STARS MEMO #1

FOR SOIL (N-BUTYLBENZENE AT 100 PPB VS. 100 PPB STARS VALUE).

GROUNDWATER SAMPLE FROM EXCAVATION DOCUMENTED SEVERAL PETROLEUM CONSTITUENTS, BUT AT RELATIVELY MINOR CONCENTRATIONS. THERE ARE NO NEARBY RECEPTORS, AND BASED ON CLEAN SOIL SAMPLES, FURTHER ACTIONS WERE NOT REQUIRED. TAGM 4046 NUMBERS WERE NOT CONTRAVENED AREA 2 WAS RELATED TO THE REMOVAL OF A 20000 GALLON AND 40000 GALLON #6 FUEL OIL TANKS, AGAIN GROUNDWATER CONTAMINATION WAS DOCUMENTED AT LOW LEVELS. NOT REQUIRING A CLEANUP. SOIL ANALYTICAL RESULTS INDICATED SEVERAL EXCEEDANCES OF STARS CRITERIA FOR TOTAL CONCENTRATIONS, HOWEVER SUBSEQUENT TCLP ANALYSES INDICATED ONLY ONE EXCEEDANCE OF STARS (70 PPB FOR PHENANTHRENE). THE SOIL RESULTS DID INDICATE EXCEEDANCES OF SEVERAL HUMAN HEALTH GUIDANCE VALUES, AND LETTER (DATED 11/29/00) WAS SENT REQUESTING EXCAVATION OF SOILS IN THE AREAS IN QUESTION TO ELIMINATE POTENTIAL EXPOSURE CONCERNS. ON MAY 18,01 LETTER RECEIVED FROM SENECA CO. IDA WHICH PROPOSED FILLING IN EXCAVATIONS WITHOUT FURTHER SOIL REMOVAL. THE STATE HEALTH DEPARTMENT WAS IN AGREEMENT WITH IDA PROPOSAL, AND LETTER WAS SENT CLOSING THE SPILL. NO FURTHER ACTIONS NECESSARY. 04/29/10: PAPER FILE REMOVED PER FILE RETENTION

POLICY. "

Remarks: "SAMPLE RESULTS CAME BACK AFTER REMOVING A #6 FUEL OIL UNDERGROUND

TANK, EXCEEDING VALUES, BOTH IN THE SOIL AND IN THE GROUNDWATER. "

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

SR 8/5/99 MZ TELCON WITH TOM GRASEK WHO STATED THAT THE CONTRACTOR'S (MARTIN DISPOSAL SERVICES) FRONT END LOADER RUPTURED A LINE. THE LINE HAS NOT BEEN REPAIRED YET, BUT SHOULD BE BY THE END OF TODAY OR EARLY TOMORROW. BECAUSE OF THIS, THE LOADER WILL NOT BE MOVED. THE SPILL WAS TO AN OLD ASPHALT SURFACE. SENECA ARMY DEPOT CLEANED UP ANY OIL THAT WAS OBSERVED AROUND/ADJACENT TO THE LOADER. THIS MATERIAL WAS EXCAVATED AND STAGED ON AND COVERED WITH PLASTIC. BOOMS HAVE BEEN DEPLOYED AROUND THE LOADER AND THE AREA THAT IS IMPACTED (NOT CLEANED UP YET) IS COVERED WITH PLASTIC. GRASEK STATED THAT MARTIN DISPOSAL SERVICES WILL BE HIRING A CONTRACTOR TO COMPLETE THE CLEANUP ONCE THE LOADER IS REPAIRED AND MOVED. MARTIN DISPOSAL IS RESPONSIBLE FOR

PROPER DISPOSAL OF CONTAMINATION. 03/15/00 - CLEANUP COMPLETED, NO

ACTION WAS NEEDED BY SPILLS. CLOSE."

Remarks: "A front end loader blew a hydraulic line, spilling hydraulic fluid

to the ground. Cleanup is in progress. Faxed to SR at 1300 Hrs. MZ

left message for Grasek to phone DEC with update."

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

SR 06/30/03 - APPROXIMATELY 135 CUBIC YARDS OF CONTAMINATED SOILS EXCAVATED IN MARCH 03 FROM ALONG SOUTH AND SOUTHWEST SIDE OF BLDG. 117. SOIL DISPOSED OF AT ONTARIO CO. LANDFILL. CONFIRMATORY SOIL SAMPLES INDICATE SOME EXCEEDANCES OF TAGM 4046 FOR SEMI-VOLATILES, ESPECIALLY ON WEST WALL AND BOTTOM OF EXCAVATION. SOILS WERE EXCAVATED TO TOP OF BEDROCK (SHALE) AT 5 TO 6 FEET BELOW SURFACE. THE FOLLOWING CONSTITUENTS WERE FOUND AT CONCENTRATIONS ABOVE TAGM VALUES: BENZO (A) ANTHRACENE, CHYSENE, BENZO (B) FLOURANTHENE, BENZO (B) FLOURANTHENE, BENZO (B) PAPENE INDENO (12.3.CD) PAPENE AND

(K) FLOURANTHENE, BENZO (A) PYRENE, INDENO (1,2,3-CD) PYRENE, AND DIBENZO (A,H) ANTHRACENE. DUE TO SITE CONSTRAINTS (BUILDING, DEPTH TO ROCK) AND LACK OF NEARBY RECEPTORS, ADDITIONAL REMEDIAL ACTIONS WILL

NOT BE REQUIRED. CLOSE SPILL."

Remarks: "TANK CLOSURE REPORT SUBMITTED BY EP&S, DOCUMENTS EXCEEDANCES OF

STARS FOR SEMI-VOLATILES, TOTAL CONCENTRATION OF 136.5 PPM. ANALYSIS WAS FROM SOIL SAMPLE COLLECTED AFTER REMOVAL OF A DOUBLE-WALLED FIBERGLASS WASTE OIL UST. NO CONTAMINATION WAS EVIDENT DURING THE

REMOVAL WORK. SR FOLLOWING UP."

ROMULUS	S100123263	3 VOID DUPLICATE OF 8707060	MAIN ST		NY LTANKS

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

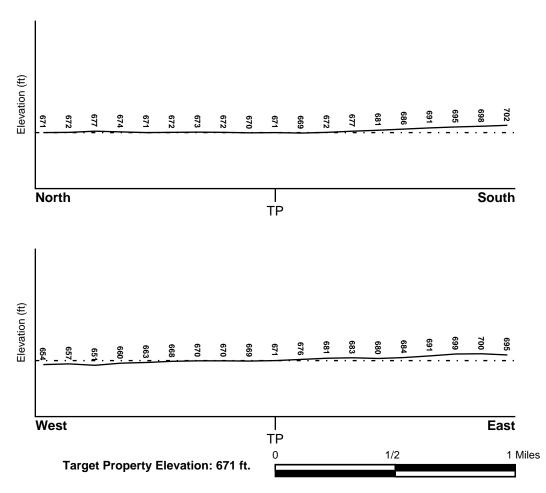

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property FEMA Source Type

Not Reported

Additional Panels in search area: FEMA Source Type

Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

ROMULUS YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION
MAP ID FROM TP GROUNDWATER FLOW
Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Ilion

Soil Surface Texture: silty clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

			Soil Layer	r Information			
Layer	Boundary			Classification		Saturated hydraulic	
	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Summary Details:

Conditions at proposal July 14, 1989): The Seneca Army Depot encompasses more than 10,000 acres in Seneca County, New York. It lies between Cayuga and Seneca Lakes in the Finger Lakes region and abuts the town of Romulus. The Army has stored and disposed of military explosives at the facility since its

inception in 1941. Seneca Army Depot is participating in the

Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean

up contamination from ha ardous materials. During preliminary

MAP FINDINGS Map ID

Direction Distance Elevation

Site Database(s) **EPA ID Number**

SENECA ARMY DEPOT ACTIVITY (Continued)

1000200707

EDR ID Number

investigations, the Army identified a number of potentially contaminated areas, including an unlined 13-acre landfill in the west-centralportion of the depot, where solid waste and incinerator ash were disposed of intermittently for 30 years during 1941-79; two incinerator pits adjacent to the landfill, where refuse was burned at least once a week during 1941-74; a 90-acre open burning/detonation area in the northwest portion of the depot, where explosives and related wastes have been burned and detonated during the past 30 years; and the APE-1236 Deactivation Furnace in the east-central portion of the depot, where small arms are destroyed. Monitoring wells on the depot downgradient of the old landfill contain elevated concentrations of trans-1,2-dichloroethylene and trichloroethylene, according to tests conducted in 1987 by an Army contractor. An estimated 1,350 people obtain drinking water from private wells within 3 miles of the depot. Status August 30, 1990): EPA, the State, and the Army are negotiating an Interagency Agreement under CERCLA Section 120 to cover future activitiesat the depot. The Army plans to conduct a remedial investigation/feasibility study to determine the type and extent of contamination at the site and identify alternatives for remedial action. Field work is scheduled to start in the fallof 1990.

SENECA ARMY DEPOT ACTIVITY Site name:

Classification: Large Quantity Generator

Waste code:

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET. WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

. Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL

KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE,

2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF

THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

AIR SYNTHETIC MINOR

US Base Realignment and Closure (BRAC) is a process used to close excess military installations and realign the total asset inventory in order to save money on operations and maintenance.

FEDERAL FACILITY HAZARDOUS WASTE DOCKET

SUPERFUND NPL

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting

requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FIS (New York - Facility Information System) is New York's Department of Environmental Conservation (DEC) information system for tracking environmental facility information found across the State.

HAZARDOUS WASTE BIENNIAL REPORTER

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RADINFO (Radiation Information Database) contains basic information about certain facilities that the U.S. Environmental Protection Agency (EPA) regulates for radiation and radioactivity. The regulations that govern radiation across the federal government are complex, and, therefore, RADINFO may not include every facility you might expect to find.

Site Description: The Seneca Army Depot (SEDA) previously occupied approximately 10,600

acres of land located in the Towns of Varick and Romulus in Seneca County, New York. The former military facility was owned by the U.S. Government and operated by the Army between 1941 and approximately 2000, when the SEDA military mission ceased. The SEDA s historic military mission included receipt, storage, distribution, maintenance, and demilitarization of conventional ammunition, explosives and special weapons. The SEDA is located in an uplands area, which forms a divide separating two of the New York Finger Lakes, Cayuga Lake on the east and Seneca Lake on the west. The elevation of the facility is approximately 600 feet (ft.) above Mean Sea Level (MSL). On July 14, 1989, the USEPA proposed the SEDA for inclusion on the National Priorities List (NPL). The USEPA recommendation was approved and finalized on August 30, 1990, when the SEDA was listed in Group 14 of the Federal Facilities portion of the NPL. Once the SEDA was listed on the NPL, the Army, the USEPA, and NYSDEC identified 57 solid waste management units (SWMUs) where historic data or information suggested, or evidence existed to support, that hazardous materials or hazardous wastes had been handled and may have been released and migrated into the environment. Each of these sites was identified in the Federal Facilities Agreement (FFA) signed by the three parties in 1993 (USEPA, NYSDEC, and Army, 1993). This list of SWMUs was subsequently expanded to include 72 sites when the Army completed the SWMU Classification Report, Final (Parsons, 1994), which was required under the terms of the FFA. The SEDA was a generator and Treatment, Storage and Disposal Facility (TSDF) and thus, subject to regulation under the Resource Conservation and Recovery Act (RCRA). Under this permit system, corrective action is required at all SWMUs, as needed. Remedial goals are the same for CERCLA and RCRA; thus, when the 72 SWMUs were classified in the SWMU Classification Report, Final (Parsons, 1994), the Army recommended that they be listed either as areas requiring NA or as Areas of Concern (AOCs). SWMUs listed as AOCs in the SWMU Classification Report, Final (Parsons, 1994) were scheduled for further investigations based upon data and potential risks to the environment. In 1995, the SEDA was designated for closure under the Department of Defense s (DoD s) Base Realignment and Closure (BRAC) process. With the SEDA s inclusion on the BRAC list, the Army s emphasis expanded from expediting necessary investigations and remedial actions at prioritized sites to include the release of non-affected portions of the Depot to the surrounding community for

their reuse for non-military purposes (i.e., industrial, municipal, and residential). Since the inclusion of the SEDA in the BRAC

EDR ID Number

program, approximately 8,000 acres have been released to the community. An additional 250 acres of land have been transferred to the U.S. Coast Guard for continued operation of a LORAN(LOng RAange Navigation) Station (which was recently closed by the Coast Guard). Groundwater contamination in excess of drinking water standards is

evident at limited portions of the site, including downgradient of the Ash Landfill. Remediation of the Ash Landfill plume is ongoing. Soil contamination, primarily with metals, has been found at a larger numbers of areas of concern at the site. Numerous Interim Remedial Measures have been undertaken by the Army to remove contaminated soils and, in most cases, these actions have constituted the final

remedy at these areas of concern.

Health Problem: The Seneca Army Depot is fenced and there is 24-hour security

limiting the potential for public exposure to site-related

contaminants. All current buildings on the Seneca Army Depot are supplied with public water so exposures to contaminated groundwater on-site are not expected. Quarterly water samples taken from residential wells downgradient from the Ash Landfill have not shown site-related contamination. The three parcels transferred to date (prison, housing, and north end) have been determined to pose no unacceptable risk to reusers. NYSDOH staff will continue to evaluate the potential for human health impacts from contamination at the Seneca Army Depot paying special attention to those areas to be

transferred from Department of Defense ownership.

Site Description: The Seneca Army Depot (SEDA) previously occupied approximately 10,600

> acres of land located in the Towns of Varick and Romulus in Seneca County, New York. The former military facility was owned by the U.S. Government and operated by the Army between 1941 and approximately 2000, when the SEDA military mission ceased. The SEDA s historic

military mission included receipt, storage, distribution,

maintenance, and demilitarization of conventional ammunition, explosives and special weapons. The SEDA is located in an uplands area, which forms a divide separating two of the New York Finger Lakes, Cayuga Lake on the east and Seneca Lake on the west. The elevation of the facility is approximately 600 feet (ft.) above Mean Sea Level (MSL). On July 14, 1989, the USEPA proposed the SEDA for

inclusion on the National Priorities List (NPL). The USEPA

recommendation was approved and finalized on August 30, 1990, when the SEDA was listed in Group 14 of the Federal Facilities portion of

Database(s) EPA ID Number

SENECA ARMY DEPOT (Continued)

S100124509

the NPL. Once the SEDA was listed on the NPL, the Army, the USEPA, and NYSDEC identified 57 solid waste management units (SWMUs) where historic data or information suggested, or evidence existed to support, that hazardous materials or hazardous wastes had been handled and may have been released and migrated into the environment. Each of these sites was identified in the Federal Facilities Agreement (FFA) signed by the three parties in 1993 (USEPA, NYSDEC, and Army, 1993). This list of SWMUs was subsequently expanded to include 72 sites when the Army completed the SWMU Classification Report, Final (Parsons, 1994), which was required under the terms of the FFA. The SEDA was a generator and Treatment, Storage and Disposal Facility (TSDF) and thus, subject to regulation under the Resource Conservation and Recovery Act (RCRA). Under this permit system, corrective action is required at all SWMUs, as needed. Remedial goals are the same for CERCLA and RCRA; thus, when the 72 SWMUs were classified in the SWMU Classification Report, Final (Parsons, 1994), the Army recommended that they be listed either as areas requiring NA or as Areas of Concern (AOCs). SWMUs listed as AOCs in the SWMU Classification Report, Final (Parsons, 1994) were scheduled for further investigations based upon data and potential risks to the environment. In 1995, the SEDA was designated for closure under the Department of Defense s (DoD s) Base Realignment and Closure (BRAC) process. With the SEDA's inclusion on the BRAC list, the Army's emphasis expanded from expediting necessary investigations and remedial actions at prioritized sites to include the release of non-affected portions of the Depot to the surrounding community for their reuse for non-military purposes (i.e., industrial, municipal, and residential). Since the inclusion of the SEDA in the BRAC program, approximately 8,000 acres have been released to the community. An additional 250 acres of land have been transferred to the U.S. Coast Guard for continued operation of a LORAN(LOng RAange Navigation) Station (which was recently closed by the Coast Guard). Groundwater contamination in excess of drinking water standards is

Env Problem:

Groundwater contamination in excess of drinking water standards is evident at limited portions of the site, including downgradient of the Ash Landfill. Remediation of the Ash Landfill plume is ongoing. Soil contamination, primarily with metals, has been found at a larger numbers of areas of concern at the site. Numerous Interim Remedial Measures have been undertaken by the Army to remove contaminated soils and, in most cases, these actions have constituted the final remedy at these areas of concern.

Health Problem:

The Seneca Army Depot is fenced and there is 24-hour security limiting the potential for public exposure to site-related contaminants. All current buildings on the Seneca Army Depot are supplied with public water so exposures to contaminated groundwater on-site are not expected. Quarterly water samples taken from residential wells downgradient from the Ash Landfill have not shown site-related contamination. The three parcels transferred to date (prison, housing, and north end) have been determined to pose no unacceptable risk to reusers. NYSDOH staff will continue to evaluate the potential for human health impacts from contamination at the Seneca Army Depot paying special attention to those areas to be transferred from Department of Defense ownership.

(UST), CONFIRMATORY SAMPLES INDICATED ONE EXCEEDANCE OF STARS MEMO #1 FOR SOIL (N-BUTYLBENZENE AT 100 PPB VS. 100 PPB STARS VALUE). GROUNDWATER SAMPLE FROM EXCAVATION DOCUMENTED SEVERAL PETROLEUM CONSTITUENTS, BUT AT RELATIVELY MINOR CONCENTRATIONS. THERE ARE NO NEARBY RECEPTORS, AND BASED ON CLEAN SOIL SAMPLES, FURTHER ACTIONS WERE NOT REQUIRED. TAGM 4046 NUMBERS WERE NOT CONTRAVENED AREA 2 WAS RELATED TO THE REMOVAL OF A 20000 GALLON AND 40000 GALLON #6 FUEL OIL TANKS. AGAIN GROUNDWATER CONTAMINATION WAS DOCUMENTED AT LOW LEVELS, NOT REQUIRING A CLEANUP. SOIL ANALYTICAL RESULTS INDICATED SEVERAL EXCEEDANCES OF STARS CRITERIA FOR TOTAL CONCENTRATIONS, HOWEVER SUBSEQUENT TCLP ANALYSES INDICATED ONLY ONE EXCEEDANCE OF STARS (70 PPB FOR PHENANTHRENE). THE SOIL RESULTS DID INDICATE EXCEEDANCES OF SEVERAL HUMAN HEALTH GUIDANCE VALUES, AND LETTER (DATED 11/29/00) WAS SENT REQUESTING EXCAVATION OF SOILS IN THE AREAS IN QUESTION TO ELIMINATE POTENTIAL EXPOSURE CONCERNS. ON MAY 18,01 LETTER RECEIVED FROM SENECA CO. IDA WHICH PROPOSED FILLING IN EXCAVATIONS WITHOUT FURTHER SOIL REMOVAL. THE STATE HEALTH DEPARTMENT WAS IN AGREEMENT WITH IDA PROPOSAL, AND LETTER WAS SENT CLOSING THE SPILL. NO FURTHER ACTIONS NECESSARY. 04/29/10: PAPER FILE REMOVED PER FILE RETENTION POLICY. "

"SAMPLE RESULTS CAME BACK AFTER REMOVING A #6 FUEL OIL UNDERGROUND

TANK, EXCEEDING VALUES, BOTH IN THE SOIL AND IN THE GROUNDWATER. "

DEC Memo: "Prior to Sept, 2004 data translation this spill Lead_DEC Field was

SR 8/5/99 MZ TELCON WITH TOM GRASEK WHO STATED THAT THE CONTRACTOR'S (MARTIN DISPOSAL SERVICES) FRONT END LOADER RUPTURED A LINE. THE LINE HAS NOT BEEN REPAIRED YET, BUT SHOULD BE BY THE END OF TODAY OR EARLY TOMORROW. BECAUSE OF THIS, THE LOADER WILL NOT BE MOVED. THE SPILL WAS TO AN OLD ASPHALT SURFACE. SENECA ARMY DEPOT CLEANED UP ANY OIL THAT WAS OBSERVED AROUND/ADJACENT TO THE LOADER. THIS MATERIAL WAS EXCAVATED AND STAGED ON AND COVERED WITH PLASTIC. BOOMS HAVE BEEN DEPLOYED AROUND THE LOADER AND THE AREA THAT IS IMPACTED (NOT CLEANED UP YET) IS COVERED WITH PLASTIC. GRASEK STATED THAT MARTIN DISPOSAL SERVICES WILL BE HIRING A CONTRACTOR TO COMPLETE THE CLEANUP ONCE THE LOADER IS REPAIRED AND MOVED. MARTIN DISPOSAL IS RESPONSIBLE FOR PROPER DISPOSAL OF CONTAMINATION. 03/15/00 - CLEANUP COMPLETED, NO

ACTION WAS NEEDED BY SPILLS. CLOSE.'

Remarks: "A front end loader blew a hydraulic line, spilling hydraulic fluid

to the ground. Cleanup is in progress. Faxed to SR at 1300 Hrs. MZ

left message for Grasek to phone DEC with update."

SR 06/30/03 - APPROXIMATELY 135 CUBIC YARDS OF CONTAMINATED SOILS EXCAVATED IN MARCH 03 FROM ALONG SOUTH AND SOUTHWEST SIDE OF BLDG. 117. SOIL DISPOSED OF AT ONTARIO CO. LANDFILL. CONFIRMATORY SOIL SAMPLES INDICATE SOME EXCEEDANCES OF TAGM 4046 FOR SEMI-VOLATILES, ESPECIALLY ON WEST WALL AND BOTTOM OF EXCAVATION. SOILS WERE EXCAVATED TO TOP OF BEDROCK (SHALE) AT 5 TO 6 FEET BELOW SURFACE. THE FOLLOWING CONSTITUENTS WERE FOUND AT CONCENTRATIONS ABOVE TAGM VALUES: BENZO (A) ANTHRACENE, CHYSENE, BENZO (B) FLOURANTHENE, BENZO (K) FLOURANTHENE, BENZO (A) PYRENE, INDENO (1,2,3-CD) PYRENE, AND DIBENZO (A,H) ANTHRACENE. DUE TO SITE CONSTRAINTS (BUILDING, DEPTH TO ROCK) AND LACK OF NEARBY RECEPTORS, ADDITIONAL REMEDIAL ACTIONS WILL

NOT BE REQUIRED. CLOSE SPILL."

Remarks: "TANK CLOSURE REPORT SUBMITTED BY EP&S, DOCUMENTS EXCEEDANCES OF

STARS FOR SEMI-VOLATILES, TOTAL CONCENTRATION OF 136.5 PPM. ANALYSIS WAS FROM SOIL SAMPLE COLLECTED AFTER REMOVAL OF A DOUBLE-WALLED FIBERGLASS WASTE OIL UST. NO CONTAMINATION WAS EVIDENT DURING THE

REMOVAL WORK. SR FOLLOWING UP."

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

State and tribal institutional control / engineering control registries

RES DECL: Restrictive Declarations Listing

A restrictive declaration is a covenant running with the land which binds the present and future owners of the property. As a condition of certain special permits, the City Planning Commission may require an applicant to sign and record a restrictive declaration that places specified conditions on the future use and development of the property. Certain restrictive declarations are indicated by a D on zoning maps.

VCP: Voluntary Cleanup Agreements

New York established its Voluntary Cleanup Program (VCP) to address the environmental, legal and financial barriers that often hinder the redevelopment and reuse of contaminated properties. The Voluntary Cleanup Program was developed to enhance private sector cleanup of brownfields by enabling parties to remediate sites using private rather than public funds and to reduce the development pressures on "greenfield" sites.

ERP: Environmental Restoration Program Listing

In an effort to spur the cleanup and redevelopment of brownfields, New Yorkers approved a \$200 million Environmental Restoration or Brownfields Fund as part of the \$1.75 billion Clean Water/Clean Air Bond Act of 1996 (1996 Bond Act). Enhancements to the program were enacted on October 7, 2003. Under the Environmental Restoration Program, the State provides grants to municipalities to reimburse up to 90 percent of on-site eligible costs and 100% of off-site eligible costs for site investigation and remediation activities. Once remediated, the property may then be reused for commercial, industrial, residential or public use.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

E DESIGNATION: E DESIGNATION SITE LISTING

The (E (Environmental)) designation would ensure that sampling and remediation take place on the subject properties, and would avoid any significant impacts related to hazardous materials at these locations. The (E) designations would require that the fee owner of the sites conduct a testing and sampling protocol, and remediation where appropriate, to the satisfaction of the NYCDEP before the issuance of a building permit by the Department of Buildings pursuant to the provisions of Section 11-15 of the Zoning Resolution (Environmental Requirements). The (E) designations also include a mandatory construction-related health and safety plan which must be approved by NYCDEP.

HSWDS: Hazardous Substance Waste Disposal Site Inventory

The list includes any known or suspected hazardous substance waste disposal sites. Also included are sites delisted from the Registry of Inactive Hazardous Waste Disposal Sites and non-Registry sites that U.S. EPA Preliminary Assessment (PA) reports or Site Investigation (SI) reports were prepared. Hazardous Substance Waste Disposal Sites are eligible to be Superfund sites now that the New York State Superfund has been refinanced and changed. This means that the study inventory has served its purpose and will no longer be maintained as a separate entity. The last version of the study inventory is frozen in time. The sites on the study will not automatically be made Superfund sites, rather each site will be further evaluated for listing on the Registry. So overtime they will be added to the registry or not.

SPDES: State Pollutant Discharge Elimination System

New York State has a state program which has been approved by the United States Environmental Protection Agency for the control of wastewater and stormwater discharges in accordance with the Clean Water Act. Under New York State law the program is known as the State Pollutant Discharge Elimination System (SPDES) and is broader in scope than that required by the Clean Water Act in that it controls point source discharges to groundwaters as well as surface waters.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Version Date: 2013

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

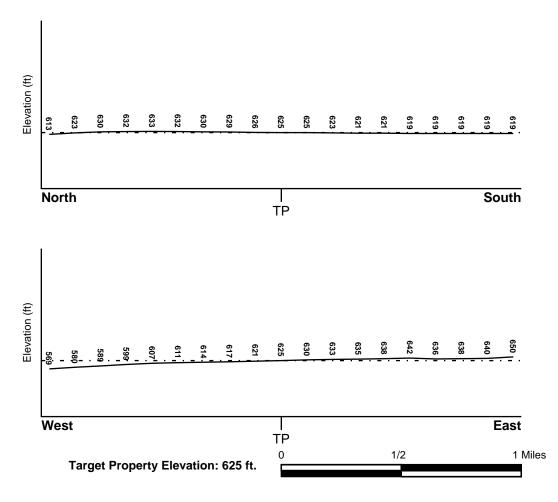

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property FEMA Source Type

Not Reported

Additional Panels in search area: FEMA Source Type

Not Reported

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

GENEVA SOUTH YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION

MAP ID FROM TP GROUNDWATER FLOW

Not Reported

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Romulus

Soil Surface Texture: silty clay loam

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high

water table, or are shallow to an impervious layer.

Soil Drainage Class: Poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 15 inches

			Soil Laye	r Information			
Layer	Boundary			Classification		Saturated hydraulic

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX C SEAD 12 – Building 819 Asbestos Inspection Report

ASBESTOS INSPECTION SEAD 12 – Building 819

SENECA ARMY DEPOT ACTIVITY, NEW YORK CONSERVATION/RECREATION AREA

Prepared for:

U.S. Army Base Realignment and Closure Office

Prepared by:

PARSONS

100 High Street Boston, MA 02110

July 2018

Limited Asbestos Inspection, SEAD 12, Building 819 Seneca Army Depot Activity, Romulus, NY Conservation/Recreation Area

A survey to determine the presence of asbestos-containing material (ACM) was conducted at SEAD 12, Building 819, at the former Seneca Army Depot in Romulus, New York. The survey was performed by Parsons, in accordance with the New York State Department of Labor (NYSDOL) and the U.S. Environmental Protection Agency (EPA) regulations. Parsons conducted the survey on 25 June 2018, by a NYSDOL-certified Asbestos Building Inspector, Daniel Douglass (Attachment 1).

The survey was completed in accordance with local, state and federal regulations, and in compliance with sampling protocol detailed in the Asbestos Hazard Emergency Response Act (AHERA). Representative bulk samples of suspect-ACM were collected randomly from homogeneous surfaces. The number of samples collected was determined by the type and quantity of the material. A total of 32 material samples were collected and submitted to the laboratory for analysis.

Laboratory services were provided by HSE Consulting Services, LLC, of Cicero, New York. HSE is accredited by the New York State Department of Health Environmental Laboratory Approval Program (ELAP; ID #11973). Sample analysis was conducted using Polarized Light Microscopy with dispersion staining (PLM-DS) in accordance with the New York State ELAP 198.1 Method. Transmission Electron Microscopy (TEM) analysis was performed to address New York State Department of Health (NYSDOH) ELAP requirements, which require re-analysis of non-friable, organically bound (NOB) samples with asbestos reported as non-detected (ELAP Method 198.4) (Attachment 2).

Any building material containing greater than one percent asbestos is considered an ACM. Suspect asbestos-containing materials identified in the building which are not sampled and not analyzed are presumed asbestos-containing material (PACM). Inaccessible areas, the roof, crawl spaces, electrical systems or areas / materials deemed unsafe for sampling were not inspected.

ACM is considered to be either friable or non-friable. A material is friable if it can be crumbled, pulverized, or reduced to powder by hand pressure. Asbestos fibers from a friable material are generally easier to become airborne than fibers from a non-friable material.

Building 819 – Building 819 is a vacant, one-story masonry structure with a flat roof and no basement. The building was formerly used for weapons assembly and quality insurance (QA) inspection for special weapons maintenance. The building was built in approximately 1957. Two large bays with overhead doors comprise the southern portion of the building along with several smaller rooms. A large room is located in the northeastern portion of the building and was used as an electrical room. A smaller room in the northwestern section of the building housed a boiler and heating units. The structure contains an estimated 8,267 square feet of space.

The following materials were determined to contain asbestos (**Attachment 2**):

Door caulk – White / light gray caulk material found between the masonry block walls and metal door frames.

Floor tile and associated mastic – Tan nine-inch by nine-inch floor tiles and associated black mastic located in several rooms. Much of this material is loose, broken and in poor condition. Floor tile was also found to contain asbestos in a previous ACM survey.

Pipe and fitting insulation – Insulating material found on one-inch and two-inch diameter water and/or steam lines is found in several areas in the building, much of it overhead. Pipe and fitting insulation was also found to contain asbestos in a previous ACM survey. All non-fiberglass pipe and fitting insulation in the building is considered ACM.

Roofing and flashing materials – The roof was not accessed or sampled during this survey. The material is believed to be built-up type of roofing and is considered PACM.

Fire doors – Two types of metal-clad fire doors were identified in the building. Large sliding doors, likely with a wood core, may have an inner asbestos layer; smaller exterior walk-through doors may also have an asbestos inner-layer. These inner layers are enclosed within the metal outer surfaces and are inaccessible; the doors are considered PACM.

The following materials were sampled, with laboratory results indicating no asbestos detected:

- Flexible, fabric HVAC duct connector
- Breeching insulation
- Wall sheetrock and associated joint compound and paper layer
- Baseboard and associated mastic
- Boiler chimney insulation, labeled as "Metalbestos"
- HVAC duct mastic

The following table summarizes the survey results; ACMs are listed first, shaded:

		DESCRIPTION /		FOR A	CM ONLY:			
MATERIAL	MATERIAL SAMPLE ID		ASBESTOS CONTENT	CONDITION, FRIABILITY	APPROXIMATE QUANTITY			
Door caulk	S819-DRCK-1-1	Gray caulk at door	5.1% Chrysotile	Fair,	10 SF

Duly Authorized Representative - Thomas H Abrams:

This license has been issued in accordance with applicable provisions of Article 30 of the Labor Law of New York State and of the New York State Codes, Rules and Regulations (12 NYCRR Part 56). It is subject to suspension or revocation for a (1) serious violation of state, federal or local laws with regard to the conduct of an asbestos project, or (2) demonstrated lack of responsibility in the conduct of any job involving asbestos or asbestos material.

This license is valid only for the contractor named above and this license or a photocopy must be prominently displayed at the asbestos project worksite. This license verifies that all persons employed by the licensee on an asbestos project in New York State have been issued an Asbestos Certificate, appropriate for the type of work they perform, by the New York State Department of Labor.

APPENDIX D Interview Documentation

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 46, SEAD 13, and SEAD 002-R-01 Interview Form

Name of Interviewee: Mr. Randall W. Battaglia

Date of Response: 27 March 2019

Question 1: What is your name, title, and basis of knowledge of the subject site identified as SEAD 46, SEAD 13, and SEAD 002-R-01?

Answer 1:

Randall W. Battaglia, PMP Project Manager New York District, US Army Corps of Engineers BRACD Environmental Coordinator, Seneca Army Depot

Basis of knowledge: 33 years at Seneca Army Depot, including 10 years as the installation environmental coordinator, 23 years as an on-site project manager, and 2 years dual hatted as project manager and BRAC environmental coordinator.

Question 2: A determination of the environmental condition of SEAD 46, SEAD 13, and SEAD 002-R-01 was made based upon the Community Environmental Response Facilitation Act (CERFA) Report, dated March 22, 1996, as amended on December 6, 1996, an Environmental Baseline Survey (EBS), dated March 12, 1997, as revised on December 3,1997, and the previous reports referenced in the Environmental Condition of Property Report (ECP) currently in preparation. Based on your knowledge of the site, is there any reason to believe that environmental conditions at the subject site exist that have not been documented in the reports referenced for development of this ECP?

Answer 2: There have been no activities at this site that would adversely affect the conditions documented above. Since the noted reports, SEAD 46 had soil investigations, groundwater investigations, and munitions surveys/removals. These actions are documented in the Final Record of Decision, SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70, dated 27 April 2017. Munitions land use controls are to be implemented and institutional controls as a protective remedy.

Question 3: Was or is the area in question used as a gasoline station, motor repair facility, dry cleaners, photo developing laboratory, plating shop, medical or dental facility, junkyard or landfill, training area, or as a waste treatment, storage, disposal, processing, or recycling facility?

Answer 3: No.

Question 4: Has there been any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemical or individual containers stored or used in the area in question?

Answer 4: No.

Question 5: Are there drums, sacks, cartons, or other containers of chemicals located on the property in question?

Answer 5: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 46, SEAD 13, and SEAD 002-R-01 Interview Form

Question 6: Was or is the area in question used for any waste generation or disposal activities?

Answer 6: No.

Question 7: Was or is the area in question used as a firing or bombing range, or both?

Answer 7: SEAD 46 was used as a QA test firing range for 3.5-inch rockets.

Question 8: Have there been or are there storage tanks containing hazardous substances or petroleum products located on the property in question?

Answer 8: No.

Question 9: Have spills, leaks, or other releases of hazardous substance or petroleum products occurred to the best of your knowledge?

Answer 9: No.

Question 10: Have unidentified waste materials, tires, automotive or industrial batteries, ordnance or any other waste materials been dumped, buried, or burned, or a combination thereof, in the area in question?

Answer 10: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 002-R-01 Interview Form

Name of Interviewee: Mr. Randall W. Battaglia

Date of Response: 27 March 2019

Question 1: What is your name, title, and basis of knowledge of the subject site identified as SEAD 002-R-01?

Answer 1:

Randall W. Battaglia, PMP Project Manager New York District, US Army Corps of Engineers BRACD Environmental Coordinator, Seneca Army Depot

Basis of knowledge: 33 years at Seneca Army Depot, including 10 years as the installation environmental coordinator, 23 years as an on-site project manager, and 2 years dual hatted as project manager and BRAC environmental coordinator.

Question 2: A determination of the environmental condition of SEAD 002-R-01 was made based upon the Community Environmental Response Facilitation Act (CERFA) Report, dated March 22, 1996, as amended on December 6, 1996, an Environmental Baseline Survey (EBS), dated March 12, 1997, as revised on December 3,1997, and the previous reports referenced in the Environmental Condition of Property Report (ECP) currently in preparation. Based on your knowledge of the site, is there any reason to believe that environmental conditions at the subject site exist that have not been documented in the reports referenced for development of this ECP?

Answer 2: There have been no activities at this site that would adversely affect the conditions documented above. Since the noted reports, SEAD 002-R-01 had soil investigations and munitions surveys/removals. These actions are documented in the Final Record of Decision, SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70, dated 27 April 2017. Munitions land use controls are to be implemented and institutional controls as a protective remedy.

Question 3: Was or is the area in question used as a gasoline station, motor repair facility, dry cleaners, photo developing laboratory, plating shop, medical or dental facility, junkyard or landfill, training area, or as a waste treatment, storage, disposal, processing, or recycling facility?

Answer 3: No.

Question 4: Has there been any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemical or individual containers stored or used in the area in question?

Answer 4: No.

Question 5: Are there drums, sacks, cartons, or other containers of chemicals located on the property in question?

Answer 5: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 002-R-01 Interview Form

Question 6: Was or is the area in question used for any waste generation or disposal activities?

Answer 6: No.

Question 7: Was or is the area in question used as a firing or bombing range, or both?

Answer 7: This area consisted of two areas which were both EOD disposal areas, according to an archive search. Limited munitions debris was found at these areas during a munitions survey. SEAD 002-R-01 is adjacent to and co-located in the same parcel as SEAD 46. The surveys had no UXO requiring disposal.

Question 8: Have there been or are there storage tanks containing hazardous substances or petroleum products located on the property in question?

Answer 8: No.

Question 9: Have spills, leaks, or other releases of hazardous substance or petroleum products occurred to the best of your knowledge?

Answer 9: No.

Question 10: Have unidentified waste materials, tires, automotive or industrial batteries, ordnance or any other waste materials been dumped, buried, or burned, or a combination thereof, in the area in question?

Answer 10: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 003-R-01 (SEAD 57) Interview Form

Name of Interviewee: Mr. Randall W. Battaglia

Date of Response: 27 March 2019

Question 1: What is your name, title, and basis of knowledge of the subject site identified as SEAD 003-R-01 (SEAD 57)?

Answer 1:

Randall W. Battaglia, PMP Project Manager New York District, US Army Corps of Engineers BRACD Environmental Coordinator, Seneca Army Depot

Basis of knowledge: 33 years at Seneca Army Depot, including 10 years as the installation environmental coordinator, 23 years as an on-site project manager, and 2 years dual hatted as project manager and BRAC environmental coordinator.

Question 2: A determination of the environmental condition of SEAD 003-R-01 (SEAD 57) was made based upon the Community Environmental Response Facilitation Act (CERFA) Report, dated March 22, 1996, as amended on December 6, 1996, an Environmental Baseline Survey (EBS), dated March 12, 1997, as revised on December 3,1997, and the previous reports referenced in the Environmental Condition of Property Report (ECP) currently in preparation. Based on your knowledge of the site, is there any reason to believe that environmental conditions at the subject site exist that have not been documented in the reports referenced for development of this ECP?

Answer 2: There have been no activities at this site that would adversely affect the conditions documented above. Since the noted reports, SEAD 003-R-01 (SEAD 57) had soil investigations, groundwater investigations, and munitions surveys/removals. These actions are documented in the Final Record of Decision, SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70, dated 27 April 2017. Munitions land use controls are to be implemented and institutional controls as a protective remedy.

Question 3: Was or is the area in question used as a gasoline station, motor repair facility, dry cleaners, photo developing laboratory, plating shop, medical or dental facility, junkyard or landfill, training area, or as a waste treatment, storage, disposal, processing, or recycling facility?

Answer 3: No.

Question 4: Has there been any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemical or individual containers stored or used in the area in question?

Answer 4: No.

Question 5: Are there drums, sacks, cartons, or other containers of chemicals located on the property in question?

Answer 5: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 003-R-01 (SEAD 57) Interview Form

Question 6: Was or is the area in question used for any waste generation or disposal activities?

Answer 6: No. This area was an EOD training area.

Question 7: Was or is the area in question used as a firing or bombing range, or both?

Answer 7: No.

Question 8: Have there been or are there storage tanks containing hazardous substances or petroleum products located on the property in question?

Answer 8: No.

Question 9: Have spills, leaks, or other releases of hazardous substance or petroleum products occurred to the best of your knowledge?

Answer 9: No.

Question 10: Have unidentified waste materials, tires, automotive or industrial batteries, ordnance or any other waste materials been dumped, buried, or burned, or a combination thereof, in the area in question?

Answer 10: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 007-R-01 Interview Form

Name of Interviewee: Mr. Randall W. Battaglia

Date of Response: 27 March 2019

Question 1: What is your name, title, and basis of knowledge of the subject site identified as SEAD 007-R-01?

Answer 1:

Randall W. Battaglia, PMP
Project Manager
New York District, US Army Corps of Engineers
BRACD Environmental Coordinator, Seneca Army Depot

Basis of knowledge: 33 years at Seneca Army Depot, including 10 years as the installation environmental coordinator, 23 years as an on-site project manager, and 2 years dual hatted as project manager and BRAC environmental coordinator.

Question 2: A determination of the environmental condition of SEAD 007-R-01 was made based upon the Community Environmental Response Facilitation Act (CERFA) Report, dated March 22, 1996, as amended on December 6, 1996, an Environmental Baseline Survey (EBS), dated March 12, 1997, as revised on December 3,1997, and the previous reports referenced in the Environmental Condition of Property Report (ECP) currently in preparation. Based on your knowledge of the site, is there any reason to believe that environmental conditions at the subject site exist that have not been documented in the reports referenced for development of this ECP?

Answer 2: There have been no activities at this site that would adversely affect the conditions documented above. Since the noted reports, SEAD 007-R-01 had soil investigations and munitions surveys/removals. These actions are documented in the Final Record of Decision, SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70, dated 27 April 2017. Munitions land use controls are to be implemented and institutional controls as a protective remedy.

Question 3: Was or is the area in question used as a gasoline station, motor repair facility, dry cleaners, photo developing laboratory, plating shop, medical or dental facility, junkyard or landfill, training area, or as a waste treatment, storage, disposal, processing, or recycling facility?

Answer 3: No.

Question 4: Has there been any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemical or individual containers stored or used in the area in question?

Answer 4: No.

Question 5: Are there drums, sacks, cartons, or other containers of chemicals located on the property in question?

Answer 5: No.

Question 6: Was or is the area in question used for any waste generation or disposal activities?

Answer 6: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 007-R-01 Interview Form

Question 7: Was or is the area in question used as a firing or bombing range, or both?

Answer 7: This area was a training range, titled the Rifle Grenade Range, for the Light Anti-Tank (LAW) weapon. This area was designed and constructed in the late 1980's, managed under a strict SOP, and used predominantly training rounds which contained minimal explosives. The ranges had targets. Munitions investigations confirmed this use. This area had no UXO requiring disposal.

Question 8: Have there been or are there storage tanks containing hazardous substances or petroleum products located on the property in question?

Answer 8: No.

Question 9: Have spills, leaks, or other releases of hazardous substance or petroleum products occurred to the best of your knowledge?

Answer 9: No.

Question 10: Have unidentified waste materials, tires, automotive or industrial batteries, ordnance or any other waste materials been dumped, buried, or burned, or a combination thereof, in the area in question?

Answer 10: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 70 Interview Form

Name of Interviewee: Mr. Randall W. Battaglia

Date of Response: 27 March 2019

Question 1: What is your name, title, and basis of knowledge of the subject site identified as SEAD 70?

Answer 1:

Randall W. Battaglia, PMP Project Manager New York District, US Army Corps of Engineers BRACD Environmental Coordinator, Seneca Army Depot

Basis of knowledge: 33 years at Seneca Army Depot, including 10 years as the installation environmental coordinator, 23 years as an on-site project manager, and 2 years dual hatted as project manager and BRAC environmental coordinator.

Question 2: A determination of the environmental condition of SEAD 70 was made based upon the Community Environmental Response Facilitation Act (CERFA) Report, dated March 22, 1996, as amended on December 6, 1996, an Environmental Baseline Survey (EBS), dated March 12, 1997, as revised on December 3,1997, and the previous reports referenced in the Environmental Condition of Property Report (ECP) currently in preparation. Based on your knowledge of the site, is there any reason to believe that environmental conditions at the subject site exist that have not been documented in the reports referenced for development of this ECP?

Answer 2: There have been no activities at this site that would adversely affect the conditions documented above. Since the noted reports, SEAD 70 had soil investigations, groundwater investigations, munitions, and a soil removal action. These actions are documented in the Final Record of Decision, SEAD-46, SEAD 003-R-01 (SEAD-57), SEAD 002-R-01 and SEAD 007-R-01 (Seneca AD Munitions Response Sites) and SEAD-70, dated 27 April 2017.

Question 3: Was or is the area in question used as a gasoline station, motor repair facility, dry cleaners, photo developing laboratory, plating shop, medical or dental facility, junkyard or landfill, training area, or as a waste treatment, storage, disposal, processing, or recycling facility?

Answer 3: No.

Question 4: Has there been any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemical or individual containers stored or used in the area in question?

Answer 4: No.

Question 5: Are there drums, sacks, cartons, or other containers of chemicals located on the property in question?

Answer 5: No.

Question 6: Was or is the area in question used for any waste generation or disposal activities?

Answer 6: No. The fill area was determined to be only soil.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 70 Interview Form

Question 7: Was or is the area in question used as a firing or bombing range, or both?

Answer 7: No.

Question 8: Have there been or are there storage tanks containing hazardous substances or petroleum products located on the property in question?

Answer 8: No.

Question 9: Have spills, leaks, or other releases of hazardous substance or petroleum products occurred to the best of your knowledge?

Answer 9: No.

Question 10: Have unidentified waste materials, tires, automotive or industrial batteries, ordnance or any other waste materials been dumped, buried, or burned, or a combination thereof, in the area in question?

Answer 10: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 12 Interview Form

Name of Interviewee: Mr. Randall W. Battaglia

Date of Response: 27 March 2019

Question 1: What is your name, title, and basis of knowledge of the subject site identified as SEAD 12?

Answer 1:

Randall W. Battaglia, PMP
Project Manager
New York District, US Army Corps of Engineers
BRACD Environmental Coordinator, Seneca Army Depot

Basis of knowledge: 33 years at Seneca Army Depot, including 10 years as the installation environmental coordinator, 23 years as an on-site project manager, and 2 years dual hatted as project manager and BRAC environmental coordinator.

Question 2: A determination of the environmental condition of SEAD 12 was made based upon the Community Environmental Response Facilitation Act (CERFA) Report, dated March 22, 1996, as amended on December 6, 1996, an Environmental Baseline Survey (EBS), dated March 12, 1997, as revised on December 3,1997, and the previous reports referenced in the Environmental Condition of Property Report (ECP) currently in preparation. Based on your knowledge of the site, is there any reason to believe that environmental conditions at the subject site exist that have not been documented in the reports referenced for development of this ECP?

Answer 2: Since the documents noted above, studies and a remedial action were conducted, and documented in a March 30, 2015 ROD. No institutional controls and no other land use controls were required for SEAD 12 in its entirety, except for a requirement for a vapor intrusion for the use of buildings 813/814, interconnected buildings formerly used as a paint shop.

Question 3: Was or is the area in question used as a gasoline station, motor repair facility, dry cleaners, photo developing laboratory, plating shop, medical or dental facility, junkyard or landfill, training area, or as a waste treatment, storage, disposal, processing, or recycling facility?

Answer 3: No.

Question 4: Has there been any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemical or individual containers stored or used in the area in question?

Answer 4: No.

Question 5: Are there drums, sacks, cartons, or other containers of chemicals located on the property in question?

Answer 5: No.

Question 6: Was or is the area in question used for any waste generation or disposal activities?

Answer 6: No.

Question 7: Was or is the area in question used as a firing or bombing range, or both?

Answer 7: No.

Environmental Condition of Property (ECP) Seneca Army Depot Activity SEAD 12 Interview Form

Question 8: Have there been or are there storage tanks containing hazardous substances or petroleum products located on the property in question?

Answer 8: No, not on the remaining parcels to be transferred.

Question 9: Have spills, leaks, or other releases of hazardous substance or petroleum products occurred to the best of your knowledge?

Answer 9: No, not on the remaining parcels to be transferred.

Question 10: Have unidentified waste materials, tires, automotive or industrial batteries, ordnance or any other waste materials been dumped, buried, or burned, or a combination thereof, in the area in question?

Answer 10: No. There were batteries in the 12C area that were excavated during the remediation. The site was completely remediated.

FINDING OF SUITABILITY TO TRANSFER (FOST)

Seneca Army Depot Activity Airfield Access Road (Sutton Road), Airfield Parcel Interview Form

Name of Interviewee:

Mr. Randall W. Battaglia

Date of Response:

19 March 2019

Question 1: What is your name, title, and basis of knowledge of the subject site identified as Airfield Access Road (Sutton Road) property (0.505 acres, which includes no buildings and includes half of an existing roadway and road shoulder)?

Answer 1:

Randall W. Battaglia, PMP

Project Manager

New York District, US Army Corps of Engineers

BRACD Environmental Coordinator, Seneca Army Depot

Basis of knowledge: 33 years at Seneca Army Depot, including 10 years as the installation environmental coordinator, 23 years as an on-site project manager, and 2 years dual hatted as project manager and BRAC environmental coordinator. Programs and projects pertaining to Sutton Road include RCRA Corrective Action, CERCLA, and BRAC Environmental Baseline Surveys of all property to determine suitability to transfer property.

Question 2: A determination of the environmental condition of the Airfield Access Road (Sutton Road) property (0.505 acres, which includes no buildings and includes half of an existing roadway and road shoulder) was made based upon the Community Environmental Response Facilitation Act (CERFA) Report, dated March 22, 1996, as amended on December 6, 1996, an Environmental Baseline Survey (EBS), dated March 12, 1997, as revised on December 3,1997, and Final Investigation of Environmental Baseline Survey Non-Evaluated sites SEAD-199A, SEAD-122(A,B,C,D,E), SEAD-123(A,B,C,D,E,F), SEAD 46, SEAD-68, SEAD-120(A,B,C,D,E,F,G,H,I,J), and SEAD-121(A,B,C,D,E,F,G,H,I) dated May 1999. Based on your knowledge of the site, is there any reason to believe that environmental conditions at the subject site have changed significantly since the EBS last issued in 1997 and 1999?

Answer 2:

The Airfield parcel that previously was suitable to transfer was bounded by the centerline of Sutton Road. This boundary was based upon survey data that was available at the time. Recent information showed that the Army in fact owned an additional 0.505 acres, namely the north side of Sutton Road. This information was provided by the Seneca County Industrial Development Agency (IDA). The IDA determined this ownership due to title search and survey data during subsequent efforts to transfer the property to a third party. The EBS, as revised, shows the southern side of Sutton road to be Category 1. Based upon my knowledge of the site, and additionally an Environmental Condition of Property update site visit in October 2018, there is no reason to believe that environmental conditions at Sutton Road have changed since the EBS.

Question 3: Was or is the area in question used as a gasoline station, motor repair facility, dry cleaners, photo developing laboratory, plating shop, medical or dental facility, junkyard or landfill, training area, or as a waste treatment, storage, disposal, processing, or recycling facility?

Answer 3:

No, for all activities listed. The area in question was used as a road.

FINDING OF SUITABILITY TO TRANSFER (FOST)

Seneca Army Depot Activity Airfield Access Road (Sutton Road), Airfield Parcel Interview Form

Question 4: Has there been any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemical or individual containers stored or used in the area in question?

Answer 4:

No, and no debris or other indications of disposal were observed in the site visit.

Question 5: Are there drums, sacks, cartons, or other containers of chemicals located on the property in question?

Answer 5:

No, and there were none observed in the parcel during the site visit.

Question 6: Was or is the area in question used for any waste generation or disposal activities?

Answer 6:

No, and there were none observed in the parcel during the site visit.

Question 7: Was or is the area in question used as a firing or bombing range, or both?

Answer 7:

No, and there were none observed in the parcel during the site visit.

Question 8: Have there been or are there storage tanks containing hazardous substances or petroleum products located on the property in question?

Answer 8:

No, and there were none observed in the parcel during the site visit.

Question 9: Have spills, leaks, or other releases of hazardous substance or petroleum products occurred to the best of your knowledge?

Answer 9:

No, and there were none observed in the parcel during the site visit.

Question 10: Have unidentified waste materials, tires, automotive or industrial batteries, ordnance or any other waste materials been dumped, buried, or burned, or a combination thereof, in the area in question?

Answer 10:

No, and there were none observed in the parcel during the site visit.
