SUBJECT: Final Construction Completion Report for the Old Construction Debris Landfill (SEAD-11) at Seneca Army Depot Activity; Contract FA8903-04-D-8675, Delivery Order 0031, CDRL A001D

Dear Mr. Hill:

Parsons Infrastructure & Technology Group Inc. (Parsons) is pleased to submit the Final Construction Completion Report for the Old Construction Debris Landfill (SEAD-11) at the Seneca Army Depot Activity (SEDA) in Romulus, New York. This Final Construction Completion Report describes the interim removal action construction activities completed at SEAD-11 between October 27, 2006 and January 5, 2007. Responses to USEPA comments received on May 25, 2007 were submitted on July 24, 2007. NYSDEC comments were received on December 6, 2007 and responses to these comments are enclosed. Copies of these responses are included as Appendix K of the subject document.

This work was performed in accordance with the Scope of Work (SOW) for Contract No. FA8903-04-D-8674, Task Order No. 0031.

Parsons appreciates the opportunity to provide you with the Construction Completion Report for this work. Should you have any questions, please do not hesitate to call me at (617) 449-1405 to discuss them.

Sincerely,

Todd Heino, P.E.
Project Manager

SUBJECT: Final Construction Completion Report for the Old Construction Debris Landfill (SEAD-11) at Seneca Army Depot Activity; Contract FA8903-04-D-8675, Delivery Order 0031, CDRL A001D

Dear Mr. Vazquez/Mr. Gupta/Mr. Sergott:

Parsons Infrastructure & Technology Group Inc. (Parsons) is pleased to submit the Final Construction Completion Report for the Old Construction Debris Landfill (SEAD-11) at the Seneca Army Depot Activity (SEDA) in Romulus, New York (USEPA Site ID# NY0213820830 and NY Site ID# 8-50-006). This Final Construction Completion Report describes the interim removal action construction activities completed at SEAD-11 between October 27, 2006 and January 5, 2007. Responses to USEPA comments received on May 25, 2007 were submitted on July 24, 2007. NYSDEC comments were received on December 6, 2007 and responses to these comments are enclosed. Copies of these responses are included as Appendix K of the subject document.

Parsons appreciates the opportunity to provide you with the Construction Completion Report for this work. Should you have any questions, please do not hesitate to call me at (617) 449-1405 to discuss them.

Sincerely,

Todd Heino, P.E.

EXECUTIVE SUMMARY

This Construction Completion Report for the Old Construction Debris Landfill (SEAD-11), located at the Seneca Army Depot Activity (SEDA or the Depot) in Romulus, New York is intended to provide record documentation of interim removal action (IRA) construction activities for SEAD-11. It provides documentation that all landfill material and soil exceeding cleanup goals or project-specific guidance values were removed and no further action at the site is required. These activities were conducted in accordance with the "Interim Removal Action Work Plan for SEAD-11, *Final*" (Parsons, 2006).

Parsons and the selected earthwork contractor, St George Enterprises, Inc., mobilized to the site on October 27, 2006. Excavation of the landfill began on November 1, 2006 at the southern edge of the landfill, moving north. Using the depth contours sketch provided in the Work Plan as a guide, the dozer excavated to a depth at which all landfill material was visibly removed and native material was visible. As the landfill was excavated, larger material was size reduced prior to stockpiling and disposal. A total of 20 tons of metal was placed in a roll off box for disposal as scrap. The excavated material was stockpiled on the northwest corner of the landfill in an area adjacent to the newly constructed truck load-out road. The northeast corner, where materials were stockpiled, was the final section to be excavated. Four intact drums were recovered containing roofing material and a fifth drum contained a petroleum based liquid. Waste characterization samples were collected from the drums. The five drums were disposed off-site by a disposal company. A total of 32,900 cubic yards (cy) of material were excavated from the landfill and a total of 42,188 tons were hauled off-site and disposed at Ontario County Landfill.

Confirmatory samples were collected at a frequency of one sample from the base of excavation every 2500 square feet (sf) and one sample along the perimeter every 50 linear feet (lf). The samples were analyzed for volatile organic compounds (VOCs), carcinogenic polycyclic aromatic hydrocarbons (cPAHs), and metals. Additional soil was excavated around the area of eight samples that failed to meet the cleanup goals or project-specific guidance values, and additional confirmatory samples were collected to confirm that the newly excavated area met the cleanup goals. The cleanup goals or project-specific guidance values proposed in the Work Plan for VOCs, cPAHs, and metals were NYSDEC TAGMs, 10 parts per million (ppm) benzo(a)pyrene toxicity equivalence (BTE), and USEPA Region IX Preliminary Remediation Goals (PRGs) for residential soil, respectively. In addition to QA/QC samples, a total of 80 final grid samples and 38 final perimeter samples were collected, and all of these samples met the cleanup goals. The sampling frequencies met the minimum requirements.

Once the excavation and confirmatory sampling was completed, the site was graded and seeded in order to restore vegetation. Backfilling the site was not necessary since the excavation of the landfill returned the site to its natural grade. The crew demobilized from the site on January 5, 2007.

Groundwater monitoring of the seven existing wells (MW11-1 through MW11-7) was completed between February 20 and February 22, 2007 to confirm that the groundwater has not been impacted since prior sampling events, and the groundwater is either meeting the GA standard or consistent with background concentrations. Three VOCs (1,1,2-trichloro-1,2,2-trifluoroethane, tetrachloroethene, and trichloroethene) were detected below their respective groundwater action levels. Three metals (aluminum, iron, and manganese) were detected at concentrations above their respective groundwater action levels; however the maximum detection of each of the metals was significantly below their respective SEDA site-wide background concentrations.

All landfill material and soil exceeding proposed cleanup goals or project-specific guidance values were removed from the site. The threat posed by the landfill material has been removed from the site. The remaining soil has been sampled and results demonstrate that the data meets cleanup goals or project-specific guidance values, the data meets NYSDEC's Unrestricted Use Soil Cleanup Objectives (SCOs), and metals data are consistent with SEDA site-specific background concentrations. Groundwater sampling conducted after the IRM was consistent with SEDA background concentrations. Based on the data, the groundwater has not been negatively impacted by the presence of the landfill materials and no further monitoring for groundwater is required. No further action is required for this site for either soil or groundwater. The Army will proceed with preparing and submitting a No Further Action (NFA) Proposed Plan and Record of Decision (ROD).

1.0 INTRODUCTION

This Construction Completion Report has been prepared for the Old Construction Debris Landfill (SEAD-11), located at the Seneca Army Depot Activity (SEDA or the Depot) in Romulus, New York. It is intended to provide record documentation of interim removal action (IRA) construction activities for SEAD-11 and to provide documentation that all landfill material and soil exceeding cleanup goals or project-specific guidance values were removed and no further action at the site is required.

This Construction Completion Report (CCR) describes IRA activities at SEAD-11 and presents sample collection and laboratory test results, record survey data, record (as-built) drawings, and photo documentation to demonstrate compliance with the requirements set forth by the "Interim Removal Action Work Plan for SEAD-11, *Final*" (Parsons, 2006a) (Final Work Plan).

1.1 Purpose of the Construction Completion Report

The purpose of this CCR is to document that all construction activities associated with IRA implementation at SEAD-11 were completed in accordance with the Final Work Plan unless otherwise noted and that no further action at SEAD-11 is required. The IRA involved the removal and off-site disposal of landfill material. Construction activities documented within this report were performed in accordance with the Final Work Plan, which included a Field Sampling Plan (FSP). This CCR will document that all required construction activities were completed. This document has been prepared for the Air Force Center for Engineering and the Environment (AFCEE) under Contract No. FA8903-04-D-8675, Task Order No. 0031.

1.2 Site Location and History

Since its inception in 1941, SEDA's primary mission was the receipt, storage, maintenance, and supply of military items. SEDA was proposed for the National Priorities List (NPL) in July 1989. In August 1990, SEDA was finalized and listed under Group 14 on the Federal Section of the NPL. To facilitate resolution of contamination issues at SEDA, the United States Environmental Protection Agency (USEPA), the New York State Department of Environmental Conservation (NYSDEC), and the Army entered into a FFA, also known as the Interagency Agreement (IAG). This agreement stated that future investigations would be based on Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) guidelines, and that the Resource Conservation and Recovery Act (RCRA) was considered an ARAR pursuant to Section 121 of CERCLA. In October 1995, SEDA was designated as a facility to be closed under the provisions of the Base Realignment and Closure (BRAC) process.

SEDA is a 10,587-acre former military facility located in Seneca County near Romulus, New York, which has been owned by the United States Government and operated by the Department of the Army since 1941. A location map for SEDA is shown in **Drawing C-1**. As shown in **Drawing C-1**, SEDA is located between Seneca Lake and Cayuga Lake in Seneca County.

SEAD-11, the Old Construction Debris Landfill, is retained by the Army pending the completion and close out of its environmental obligations at the site. SEAD-11 is located in the southwestern portion of the former Depot. The landfill reportedly operated in the 1940s, and today the site is abandoned. Its surface is generally vegetated with brush, grasses, and weeds, and it was characterized by an area of elevated topography that defined its general shape. Overall, the Old Construction Debris Landfill measured approximately 4 acres in size. A site plan is presented in **Drawing C-2**. There are no developed portions of the site.

The site is bound to the east by SEDA railroad tracks; beyond these tracks is an upward sloping field covered with grass and low brush. The southern perimeter of the landfill is vegetated with deciduous trees; the area further south of the site is covered with dense low brush. West of the site is an open grass field that ends at West Patrol Road and the perimeter security fence that rings the former SEDA boundary. Indian Creek is located approximately 1,000 feet west of the "toe" of the former landfill. The site is bounded to the north by Indian Creek Road, beyond which is an open grass field which gives way to trees and low brush several hundred feet from the road.

The relief of the landfill was well defined on the generally west-sloping regional topography in the area. Prior to the IRA, the landfill surface sloped mostly to the northwest. A thicker fill layer was indicated in the southern and western portions of the landfill and resulted in steeper scarps on its south and southwestern sides. The more gently sloping hills on the north and northwestern sides suggested a thinner layer of fill. The landfill had an average thickness of 4 feet. Assorted construction debris included metal, scrap wood, and several empty 55-gallon drums were observed on the southern and southwestern edges of the landfill.

1.3 Contaminants of Concern

Landfill Material

A total of 14 test pits were excavated in SEAD-11 to characterize the type and thickness of fill present within the landfill. As predicted by a geophysical survey, much of the landfill material was metallic debris, including various scrap metal, metallic rods, and metallic webbing. In addition, crushed 55-gallon drums and other metal containers were found in the landfill. Although abundant metallic material was encountered, the dominant type of fill was nonmetallic, including soil, large concrete slabs and fragments, ash material, roofing material, gypsum blocks, rail road ties, asphalt, and construction debris (concrete, glass, and nails). The edge of the landfill was defined by the geophysical survey except in areas where woods did not allow surveying.

Soil Data

The results of the soil sampling completed during the ESI and the additional sampling program indicated that impacts to the surface and subsurface soil had occurred at this site. Soil immediately underlying the landfill material had been impacted above relevant cleanup goals by volatile organic compounds (VOCs), carcinogenic polycyclic aromatic hydrocarbons (cPAHs), and metals.

Soil analytical results showed that two VOCs, acetone and TCE, cPAHs, and metals were detected at concentrations above their respective cleanup goals or project-specific guidance values. Soil concentrations of particular note in landfill materials included TCE (up to 42 ppm) and lead (up to 7,210 ppm).

Groundwater Data

Groundwater at the site appears to have been impacted by metals and possibly VOCs. Tetrachloroethene and TCE were detected in groundwater samples at concentrations below their respective NYS Class GA standard. The results of the groundwater sampling program at SEAD-11 indicate that aluminum, antimony, iron, manganese, sodium, and thallium were present in individual wells at concentrations above groundwater standard values; however, these metals were found at levels generally consistent with background concentrations historically observed at SEDA. SVOCs, pesticides, PCBs, herbicides, nitrate/nitrite, and nitroaromatics were not detected above groundwater standard values.

1.4 Report Organization

The first section of this report serves as an introduction to the CCR and provides site history. **Section 2** details the pre-construction activities completed at SEAD-11. **Section 3** summarizes the construction activities, including the earthwork and confirmatory sample collection and analysis. **Section 4** addresses differences from the Final Work Plan. **Section 5** presents post-construction activities, including groundwater monitoring results. **Section 6** presents the conclusions and recommendations. References are provided in **Section 7**.

Appendix A includes the daily reports; **Appendix B** includes the waste disposal characterization data; **Appendix C** provides photo documentation of the field work; **Appendix D** presents the complete analytical results of the confirmatory samples; the chain of custodies for the confirmatory soil samples are provided in **Appendix E**, and the SDG case narratives from the laboratory are included as **Appendix F**; data validation sheets are presented in **Appendix G**; **Appendix H** includes the drum disposal characterization data; **Appendix I** includes a summary of the non-hazardous solid waste manifests and a CD of the manifest; complete groundwater results are presented in **Appendix J**; and the Army's responses to regulator comments are included as **Appendix K**.

2.0 PRE-CONSTRUCTION ACTIVITIES

This section discusses the activities performed in preparation for IRA implementation at SEAD-11. These activities included a health and safety kick-off meeting; establishment of site access and security, such as access roads, fencing, and signage; clearing requirements; utility clearance; establishment of work and staging areas; control of run-on and run-off waters; water management; establishment of erosion and sedimentation controls; well protection; disposal characterization and approval; a pre-construction meeting; and a site survey.

2.1 Health and Safety Meeting

Prior to the commencement of construction, a health and safety indoctrination meeting was held at SEDA on October 27, 2006. Parsons employees, SEDA personnel, and the earthwork subcontractor, St George Enterprises, Inc., attended the health and safety meeting. A review of the project health and safety requirements and procedures outlined in the "Project Safety Plan and Site-Specific Health and Safety Plan for Seneca Army Depot Activity PBCII" (Parsons, 2006b) was performed. Project coordination and communication and the scope of work were discussed.

2.2 Site Security and Security

SEAD-11 is located within the portion of the Depot which is surrounded by a fence with locked gates. The Army provided site access to the field team prior to and during the performance of construction activities. Site security was necessary to prevent exposure of unauthorized, unprotected individuals to the work area. The area immediately surrounding the work area was clearly marked through the use of signs, barrier rope, tape, or fencing.

Construction activities were coordinated with the appropriate point of contact at SEDA in advance of construction. Notification was provided for all work planned at the site. All visitors to the work site reported to the Site Manager (SM) and/or the Site Health and Safety Officer (SHSO) as soon as they arrived on-site. The presence of visitors on-site, including the visitor's name, company, date, time, and activities performed while on site, was recorded in the site visitors log and in the daily reports provided in **Appendix A**.

2.3 Clearing

Approximately 2.5 acres of brush in the south and southeast portion of the site was cleared from the site with a brush hog and the area was mowed. Trees within the excavation area were removed and chipped in the on-site chipper. The wood chips remained on-site.

2.4 Identification of Obstructions and Utilities

No underground utilities were identified prior to the commencement of work. Parsons and St. George contacted UGFPO (Underground Facilities Protective Organization) for utility clearance prior to

beginning work. UGFPO stated that there were no underground utilities within the limits of work at SEAD-11. Utility protection or abandonment was not required. During excavation, a telephone cable was located and required protection. There was no loss of service.

2.5 Establishment of Work and Staging Areas

The perimeter of the site and its support zone was marked using stakes and orange security (“snow”) fencing. Entry/exit ways through the security fencing were placed as required to support needed traffic flow. The support area for the SEAD-11 activity was established at the northern end of the landfill. The work support zone was arranged to facilitate free and logical equipment movement to and from the site of the excavation work within the area, which enhanced safety, security and minimized the likelihood that known site contaminants were introduced to new areas of the Depot.

Equipment leaving the work area was decontaminated by washing it with water from the water truck in a wash area located on the landfill side of Indian Creek Road. The wash area was made from the wood chips found along the road. Water used in the washing was absorbed in the landfill material and sent off-site for disposal. All vehicles and personnel exiting the site passed through the decontamination area prior to site exit to ensure that loose material was not tracked beyond the bounds of the landfill site or onto Depot and local roads. A temporary truck loading road with a truck turnaround area was constructed along Indian Creek Road at the northwestern edge of the landfill, as shown in **Drawing C-2**. The road was constructed using geotextile fabric, approximately 2 feet of cobble stones (approximately 510 tons), and 50 tons of crush or run were placed over the cobble stones. A 12-inch steel culvert pipe was added at the entrance and exit of the loading road to maintain the water flow in the swale.

Landfill material was stockpiled pending loading at the northwestern edge of the landfill over material that was to be excavated last. Erosion control measures were taken to prevent sediment transport.

2.6 Control of Run-On and Run-Off Waters

The subcontractor provided silt fencing along the downgradient edge of the landfilled area to prevent sediment transport to clean areas. Check dams were installed in the east and west end of the drainage swale that runs along Indian Creek Road. As mentioned in **Section 2.5** above, a pipe was added at the entrance and exit of the loading road to maintain the water flow in the swale. The silt fencing will be removed once vegetation is established.

2.7 Water Management

A frac tank was delivered to the site and staged northwest of the landfill. During construction, ponding of water was minimal and did not impact excavation or sampling activities. Collection of water was not necessary. The frac tank, sampling, and disposal of water were not required.

2.8 Establishment of Erosion and Sedimentation Controls

Temporary erosion and sedimentation controls, such as silt fencing and hay bales, were installed in downgradient areas during operations to prevent migration of sediments and erosion. Prior to beginning any excavation work, temporary silt fencing was erected, which surrounded the downgradient sides of disturbed areas to prevent contaminated sediment transport. The temporary silt fencing was maintained throughout the project and will not be removed until permanent vegetation has been re-established. Any temporary erosion control measures were removed following remediation so as to return drainage patterns to their general conditions prior to remediation.

2.9 Well Protection

Seven monitoring wells (MW11-1 through MW11-7) were protected during remediation activities by placing visible barriers around them.

2.10 Disposal Characterization and Approval

Pre-approval from the disposal facility that would accept the landfill material at SEAD-11 was obtained. The disposal facility, Ontario County Landfill in Flint, New York, required that the analysis of one sample per 2,000 tons of material from the area anticipated to be excavated at SEAD-11. This sampling requirement was based on the disposal facility's review of the historic sampling results at SEAD-11 and their specific sampling requirements.

Nineteen initial disposal characterization test pits were excavated into the landfill, and the locations are shown on **Drawing C-2**. Each test pit was excavated through landfill material to a depth at which native material was encountered. One composite waste characterization sample was collected from each of the 19 test pits. Each sample from a test pit was a composite of multiple grabs from that test pit. The samples were submitted to Severn-Trent Laboratory (STL) located in Buffalo, New York. The disposal facility required that all samples were analyzed for hazardous waste characterization (reactivity, ignitability, and corrosivity), and eight of the samples from the test pits were analyzed for Toxicity Characteristic Leaching Procedure (TCLP) metals. Lead above the TCLP limit of 5 mg/L was detected in the composite sample from one test pit, TP-23. The disposal facility did not require testing for other TCLP parameters based on a review of historic information. White blocks were tested and determined to be gypsum and the roofing material was tested and determined to contain less than 1% asbestos.

Four new test pits located immediately to the north, west, south, and east of TP-23 were excavated to delineate the horizontal limits of the hazardous concentrations of lead in the soil. A total of four samples, one composite sample from each test pit, were collected and submitted to STL for analysis of TCLP lead. Each of the four samples met the TCLP limit for lead. The analytical data is provided in **Appendix B**.

Parsons and the disposal facility agreed that the area around TP11-23 would be isolated from the rest of the landfill material and addressed during construction activities through stabilization. Based on the historic data and the waste characterization sampling results, the disposal facility pre-approved acceptance of the landfill material, excluding the area surrounding TP11-23, as non-hazardous material suitable for daily cover.

2.11 Pre-Construction Meeting

A project kick-off meeting was held at SEDA on October 31, 2006. Attendees included Parsons' Site Manger (SM), Project Manager (PM), and SEDA personnel. The meeting included a review of health and safety issues, construction quality management requirements, and a site walk at SEAD-11. SEDA, Parsons, the subcontractors, St. George and Riccelli Enterprises, Inc, and a representative from Ontario County Landfill coordinated administrative issues related to the project to ensure that the IRA would be executed smoothly.

2.12 Staking and Surveying

A pre-construction site survey was completed using a Trimble 5700 Real-Time Kinematic (RTK) global positioning system (GPS) unit. The Trimble GPS unit has an accuracy of ± 10 mm for horizontal measurements and ± 20 mm for vertical measurements. Survey points were collected at 25 foot intervals across the landfill. At the edge of the landfill where the slope increased, additional survey points were collected to improve the accuracy of the surface contours. The horizontal datum was based on NAD83 per SEDA SEAD-64D monuments survey control coordinates dated 1994. The vertical datum was based on NAD88.

3.0 CONSTRUCTION ACTIVITIES

This section documents construction-phase activities associated with the IRA at SEAD-11. Construction activities described here began with mobilization of Parsons' field crew and selected earthwork subcontractor, St. George Enterprises, Inc of Fredonia, New York, on October 27, 2006. All construction activities were completed by January 5, 2007, at which time Parsons and St. George demobilized from the site. All pre-construction, construction, and post-construction activities that took place at SEDA were documented in daily reports (**Appendix A**).

3.1 Site Preparation

The field crew and equipment were mobilized to the site on October 27, 2006. Site preparation included the following activities:

- Mobilization; and
- Construction of drum containment area.

3.1.1 Mobilization

The field crew and the equipment were mobilized to the site on October 27, 2006. Equipment included two Kotamatsu dozers, 2 Cat 325 excavators, a frac tank, a Pri Max screener, and a trailer for the crew.

3.1.2 Drum Containment Area

A drum containment area was constructed to temporarily stage drums recovered from the landfill. The containment area was constructed of soil berms and covered in polyethylene sheeting.

3.2 Health and Safety During Construction

At the start of each work day, all on-site workers attended a daily health and safety briefing conducted by the Site Health and Safety Officer (SHSO), Mr. Ken Cargel. Site visitors were required to review the project Health and Safety Plan (Parsons, 2006b) and attend a site-specific health and safety briefing. These "tailgate" meetings were mandatory for all subcontractors and Parsons personnel working at the site. At each meeting, the SHSO discussed personal protective equipment (PPE) needs for that day and any potential hazards associated with the day's scheduled activities. The topics covered and all attendees at each daily briefing were documented, and the records were stored by the SHSO in the project files.

3.3 Air Monitoring

Air monitoring of the work area for dust was conducted during the excavation of the landfill when weather conditions permitted. The dust monitor, Thermo 4000, provided real time perimeter measurements. The air monitoring equipment was positioned downwind of the work areas. The dust monitors were set up from November 6 through November 15, 2006, at which time it was determined that dust was not a problem at the site based on the low air monitoring readings.

The excavation face was monitored for VOCs using the Mini Rae 2000 and the PID/OVM. No VOCs were detected.

3.4 Landfill Excavation

3.4.1 Excavation of Landfill Material

Excavation began on November 1, 2006 at the southern edge of the landfill. Using the depth contour sketch provided in the Final Work Plan as a guide, the dozer excavated to a depth at which all landfill material was visibly removed and native material was visible. **Figure 3-1** shows the actual depths of excavation. The excavation proceeded to the north. As **Figure 3-1** illustrates, the thickest areas of landfill material was encountered at the western side of the landfill, extending to 10 feet below the original grade. A shallow area of landfill material was encountered about 225 feet west of the railroad tracks in the eastern side of the landfill. The landfill material was predominantly soil with inert material (e.g., concrete, wood, roofing material, metal, and glass).

As the landfill was excavated, a total of 20 tons of metal was retrieved and placed in a roll off box for disposal as scrap. Larger non-metallic material was size reduced so that it met the requirements of 6 inches or less for use at the disposal facility as daily cover under a beneficial use determination (BUD) by breaking it with the excavator bucket or by crushing it with the excavation equipment. A small amount of wood debris was reduced in the screener/grinder. The size reduced material was commingled with the excavated soil using the dozer during the stockpiling effort. The excavated landfill material was stockpiled on the northwest corner of the landfill in an area adjacent to the newly constructed truck load-out road, shown on the site plan, **Drawing C-2**. Recovered concrete was brushed clean and buried at the site under clean grids once the grid's confirmatory sample was collected and met the cleanup goals or project-specific guidance values. The northeast corner, where materials were stockpiled, was the final section to be excavated. To ensure the removal of all landfill material, excavation extended slightly beyond the anticipated boundary to the south and southwest of the landfill. In the event that confirmatory samples failed to meet the cleanup goals or project-specific guidance values (as discussed below in **Section 3.4.3**), additional soil was excavated to ensure that all soil left on-site achieved cleanup goals or project-specific guidance values. All excavation activities were completed on January 3, 2007. A total of 32,900 cy of material were excavated from the landfill.

As discussed in **Section 2.10**, an area around TP11-23 with high levels of lead was delineated based on the sampling results of four additional test pits surrounding TP11-23. The landfill material in this delineated area was excavated and mixed with 3 tons of Portland cement. The excavator was used to spread and mix the cement with the impacted soil, as shown in the photos in **Appendix C**. The Portland cement stabilized the lead in the soil to reduce its leachability. One sample of stabilized material was submitted for TCLP lead analysis. The stabilized material was moved to separate stockpile adjacent to the main stockpile area until analytical results were obtained. The results showed that the TCLP lead concentration was 0.0312 mg/L, which is lower than the regulatory limit of 5 mg/L. The stabilized material was added to the larger stockpile and disposed off-site in the non-hazardous landfill.

3.4.2 Run-Off Control

Site excavation within the old landfill proceeded by working from the southern section of the landfill and continuing north to prevent contact of stormwater with landfill material. Erosion controls were implemented in the field, such as placing hay bales and creating interceptor trenches or diversion berms along the open face of the excavation, to prevent water from entering the open face of the landfill. A photo of an interceptor trench on the southern edge of the landfill is included in **Appendix C**. All erosion control measures were inspected daily and repaired as necessary. Water management and control measures, such as the diversion berms were constructed throughout the project duration and were adjusted as field conditions warranted and as the face of the excavation moved.

3.4.3 Confirmatory Sampling

Sample Collection

Confirmatory samples were collected from the base of the excavation and from the perimeter of the landfill, as outlined in the Final Work Plan to confirm that all landfilled material was removed from the landfill. 50-foot by 50-foot grids were laid out over the excavation area as a means to track the location of confirmatory samples. Beginning at the southwest corner of the landfill, the east-west grids were labeled numerically, moving from west to east, and the north-south grids were labeled alphabetically, trending from south to north, as shown in **Drawing C-3**.

Once sufficient grids were excavated, confirmatory base samples were collected as grab samples from the center of each grid. This corresponds to a frequency of one sample every 2500 square feet (sf) of excavated area. Confirmatory samples were also collected along the perimeter of the excavated landfill at a frequency of one sample every 50 linear feet (lf). Each confirmatory sample collected from the base and perimeter was a surface sample collected from a depth range of 0 to 2 inches below ground surface (bgs). Samples were submitted to Severn-Trent Laboratory (STL) located in Buffalo, New York for analysis of TCL VOCs by USEPA SW846 Method 8260B, cPAHs by USEPA SW846 Method 8270C, and TAL metals by USEPA SW846 Method 6010B (and mercury by USEPA SW846 Method 7471A). Analytical results were compared to the cleanup goals or project-specific guidance

values, established in the Final Work Plan, listed in **Table 3-1**. The VOCs, cPAHs, and metals were compared to NYS TAGMs, 10 ppm benzo(a)pyrene toxicity equivalence (BTE), and USEPA Region IX Preliminary Remediation Goals (PRGs) for residential soil, respectively, as required in the Final Work Plan.

All samples were collected following procedures outlined in the “Revised Final Sampling and Analysis Plan for Seneca Army Depot Activity (SAP)” (Parsons, 2006c). Analytical data for all confirmatory samples are provided in **Appendix D**. The chains of custody for the confirmatory samples are included in **Appendix E**. The data were validated in a manner that is consistent with procedures defined in the USEPA’s “National Functional Guidelines for Organic Data Review” and consistent with USEPA Region 2’s Standard Operating Procedures (SOP). The case narratives are included as **Appendix F**. A data validation report is provided in **Appendix G**.

Initial Results

The initial confirmatory results were compared to the project cleanup goals or project-specific guidance values to determine if additional soil excavation was required. The initial comparison showed the following results. Six confirmatory samples collected at the base of the excavation failed to achieve the project-specific guidance value identified in the Final Work Plan for cPAHs (and one of those samples also exceeded the goal for lead). For those six samples, an additional 6 inches of soil was excavated from the grid surrounding the failed confirmatory sample and a new base confirmatory sample was collected from the 0 to 2 inches bgs at the center of the grid and submitted to STL for analysis of the contaminants for which the original sample failed to meet the project-specific guidance values. These new sample results met cleanup goals or project-specific guidance values. Concentrations of cPAHs exceeded the project-specific guidance value of 10 ppm BTE in two confirmatory perimeter samples. For these two perimeter samples, additional soil surrounding the failed sample was excavated and disposed. After that area was over excavated, a new confirmatory sample was collected at the location of the failed sample to confirm that the floor of the excavation met cleanup goals or project-specific guidance values, and new perimeter samples were collected along the boundary of the modified excavation area in a manner that maintained the frequency of collecting perimeter samples every 50 lf and confirmed that the perimeter of the landfill was clean. The table below identifies original samples that failed to meet the cleanup goals or project-specific guidance values, details the subsequent action that was taken, and lists the new confirmatory sample that was collected.

Failed Sample (Failed COC)	Action Taken	New Confirmatory Sample (Sample type)
11EXFLB501 (cPAHs)	Excavated entire B5 grid to 6”; collect new floor sample	11EXFLB502 (floor)
11EXFLB701 (cPAHs)	Excavated entire B7 grid to 6”; collect new floor sample	11EXFLB702 (floor)
11EXFLC601 (cPAHs)	Excavated entire C6 grid to 6”; collect new floor sample	11EXFLC602 (floor)
11EXFLC701 (cPAHs, lead)	Excavated entire C7 grid to 6”; collect new floor sample	11EXFLC702 (floor)

Failed Sample (Failed COC)	Action Taken	New Confirmatory Sample (Sample type)
11EXFLC801 (cPAHs)	Excavated entire C8 grid to 6"; collect new floor sample	11EXFLC802 (floor)
11EXFLD101 (cPAHs) 11EXPRE201 (cPAHs)	Excavated entire D1 grid and partial C0 and D0 grids to 6"; collect four new floor samples and 2 new perimeter samples	11EXFLD102 (floor) 11EXFLD002 (floor) 11EXFLC001 (floor) 11EXFLD001 (floor) 11EXPRC001 (perimeter) 11EXPRD001 (perimeter)

Drawing C-3 shows the landfill and highlights the location of seven areas that required additional excavation. The data that failed to meet the cleanup goals or project-specific guidance values have been removed from the data set of analytical results representative of current site conditions, since the associated soil is no longer on-site; however the results for all samples, including the failed samples, are included with all of the data presented in **Appendix D**.

Final Results

All excavation and confirmatory sampling activities were completed on January 5, 2007. A total of 32,900 cy of landfill material were excavated. This resulted in the excavation of the landfill with a footprint of 191,313 sf and a perimeter of 1,762 lf. A total of 80 final grid samples and 38 final perimeter samples were collected, which is greater than the number of confirmatory samples required for the site based on the specified frequencies of one grid sample per 2,500 sf and one perimeter sample per 50 lf.

	No. of Samples Required	No. of Samples Collected
Grid Samples	77	80
Perimeter Samples	38	38

The cleanup goal for VOCs is the NYS TAGMs. All final confirmatory results met the VOC cleanup goals. Six VOCs (acetone, cis-1,2-dichloroethene, dichlorodifluoromethane, methylene chloride, tetrachloride, and trichloroethene) were detected at levels below proposed cleanup goals, NYSDEC TAGM values. Methylene chloride, a common lab contaminant, was detected in 107 of the 113 samples analyzed, with a maximum detection of 49 µg/Kg (TAGM value is 100 µg/Kg). Trichloroethene was detected 19 times out of 113 samples, with a maximum detection of 77 µg/Kg (TAGM value is 700 µg/Kg). The other four VOCs were detected at a frequency of detection of 4% or less. A summary of detected analytes is presented in **Table 3-2**. The final VOCs and metals data are presented in **Table 3-3a** and the final cPAHs data are presented in **Table 3-3b**. **Table 3-4** provides a side-by-side comparison of the data for the failed samples and the data for the final samples collected to replace the failed data. A graphical comparison of the VOC data to NYSDEC's Unrestricted Use SCO is listed in Table 375-6.8(a) is shown in **Figure 3-2a**.

The project-specific guidance value for cPAHs [benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene] is the New York State guidance value of 10 ppm benzo(a)pyrene toxicity equivalence

(BTE). All final confirmatory sample results representative of soil remaining on-site met the 10 ppm BTE value for cPAHs. The maximum BTE value detected was 8.1 ppm and the average BTE concentration was 0.70 ppm. A graphical comparison of the data for the individual cPAHs to NYSDEC's Unrestricted Use SCO listed in Table 375-6.8(a) is shown in **Figure 3-2b**. The figure illustrates that the 95th UCL for each cPAH is below the Unrestricted Use SCOs, with the exception of benzo(b)fluoranthene. The 95th UCL for benzo(b)fluoranthene is 1,090 µg/kg, compared to the unrestricted SCO of 1,000 µg/kg. The USEPA ProUCL, Version 4, program used to calculate the 95th UCL identified a potential statistical outlier for the benzo(b)fluoranthene data set, the detection of 7,400 µg/kg of benzo(b)fluoranthene. The 95th UCL is driven by this statistical outlier, and if that single sample were removed from the dataset, the 95th UCL would decrease dramatically to 694 µg/kg, which is below the unrestricted SCO of 1,000 µg/kg. Therefore, caution should be taken with respect to reviewing the benzo(b)fluoranthene UCL result. Overall, the final cPAH concentrations are well below the project-specific guidance value established in the Final Work Plan and supports unrestricted use for the site.

The proposed metals cleanup goals in the Final Work Plan were the USEPA Region IX's PRGs for a resident. All of the individual metals concentrations detected in final confirmatory samples met the proposed cleanup goals or were similar to Seneca site-wide background concentrations. The 95th upper confidence level (UCL) of the mean for each metal is below NYSDEC's Unrestricted Use Soil Cleanup Objectives listed in Table 375-6.8(a). The 95th UCL of the mean is a reasonable value to represent concentrations since the dataset for each metal includes 114 data points. A summary of the detected analytes are presented in **Table 3-2** and the final metals data are presented in **Table 3-3a**. Iron was detected greater than the maximum site background concentration (38,600 mg/Kg) once at a concentration of 51,100 mg/Kg. All other iron detections and the 95th UCL of the mean for iron (23,300 mg/Kg) were well below the maximum site background value.

Metals concentrations detected at the site are presented in bar graphs in **Figures 3-2c** and **3-2d**, comparing the 95th UCL of the mean to the proposed cleanup goals, SEDA site-wide background values, and NYSDEC's Unrestricted Use Soil Cleanup Objectives (SCOs). Due to differences in the scale of the concentrations ranges, aluminum, iron, manganese, and zinc are presented in **Figure 3-2a** and the other metals are presented in **Figure 3-2b**. These bar graphs illustrate that all of the 95th UCL of the mean concentrations for metals, except zinc, are below all of the benchmark values listed. The 95th UCL for zinc (114 mg/kg) is at a similar level as the unrestricted SCO (109 mg/kg), and **Figure 3-2d** shows that it is less than SEDA site-wide background.

All final confirmatory samples met the proposed cleanup goals or project-specific guidance values for VOCs, cPAHs, and metals listed in the Final Work Plan. A risk evaluation was not considered necessary as part of the completion report since all final samples results met the site cleanup goals or project-specific guidance values and the data are generally less than NYSDEC's Unrestricted Use SCOs.

3.4.4 Recovery of Drums

During excavation activities, five intact drums were recovered and placed in the drum containment area constructed adjacent to the northwest corner of the landfill. Four of the drums appeared to have identical contents, which was described as roofing tar. The fifth drum was unlabeled and site observations noted it appeared to be a petroleum based liquid. After consulting with a drum disposal company, Parsons collected a drum characterization sample from the liquid drum and from one of the tar drums and submitted them to STL for analysis of PCBs and RCRA hazardous characteristics. The drum disposal company accepted the analytical results (**Appendix H**), and the drums were overpacked and transported off-site for disposal as non-hazardous waste by Environmental Products and Services of Vermont.

3.4.5 Transportation and Off-Site Disposal

Parsons subcontracted with Riccelli Enterprises, Inc. to transport and dispose of the excavated material at Ontario County Landfill in Flint, NY. Riccelli used the temporary truck load out road along Indian Creek Road to load out the excavated landfill material that was stockpiled in the staging area at the northwest corner of the landfill. Truck load was completed between November 8, 2006 and January 3, 2007 on non-consecutive days. An average of 117 trucks per day were loaded on the dates that loading was conducted. A total of 42,188 tons (1529 loads) were hauled off-site and disposed at Ontario County Landfill. A log of the waste manifests and copies of the non-hazardous waste manifests (on CD) are provided in **Appendix I**.

3.4.6 Site Restoration

As mentioned in **Section 3.4.1**, recovered construction debris, such as concrete, was brushed clean and buried at the site under clean grids once the grid's confirmatory sample was collected and met the cleanup goals or project-specific guidance values. Soil from the clean grids was placed on top of the buried concrete, so that the grade resembled the natural slope. No off-site material was required to cover the concrete.

Once the excavation was completed, a post-excavation final site survey was completed using the 5700 RTK GPS unit. The final grading is shown in **Drawing C-4**. It shows that the surface resembles the natural slope of the area with no depressed areas that will allow ponding of water. The ground surface was graded, seeded, and covered in mulch. The selected seed mixture consisted of the following:

- 30% Timothy
- 30% Perennial Ryegrass
- 15% Alfalfa
- 10% Red Clover
- 10% White Clover
- 5% Ladino Clover

Backfilling the site was not necessary since the excavation of the landfill returned the site to its natural grade. Approximately 160 cy of clean sand was provided by Riccelli placed in the area of additional excavation on the west side of the landfill (near grid D1, **Drawing C-4**) to fill in a low spot.

The site and the surrounding area were restored to their pre-construction condition. Track ruts from equipment were smoothed and covered with straw or mulch. The drainage swale located along the road edge was re-established. The truck route roads were patched up as needed. The crew demobilized from the site on January 5, 2007.

3.5 Construction Costs

The total construction costs for the IRA at SEAD-11 was approximately \$4.2 million. The cost break down is as follows:

Engineering/Oversight	\$300,000
Construction	\$3,800,000
Analytical Laboratory	\$100,000

4.0 SUMMARY OF DIFFERENCES FROM THE WORK PLAN

There were no substantive changes from the Final Work Plan to the implementation of the IRA in the field.

5.0 POST-CONSTRUCTION ACTIVITIES

5.1 Groundwater Monitoring

Groundwater monitoring of the seven existing wells (MW11-1 through MW11-7) was completed between February 20 and February 22, 2007. Historically, metals were detected in the groundwater at the site above groundwater standards, and tetrachloroethene and TCE were detected in groundwater samples at concentrations below their respective NYS Class GA standard. This post-excavation sampling event was performed to confirm that the groundwater has not been impacted since prior sampling events, and the groundwater is either meeting the GA standard or consistent with background concentrations, and that no further action is needed for groundwater at SEAD-11.

Groundwater samples were collected using low flow sampling techniques at SEAD-11 in February 2007. A bladder pump was used at six of the wells. Monitoring well MW11-3 was slightly damaged in a way such that the bladder pump could not be lowered into the well to collect the sample. Instead, the dedicated tubing in the well was connected to a peristaltic pump, which was used to purge the well and collect the sample. Note that though there was minor damage to the riser of MW11-3, the damage did not extend down to the subsurface and there was no impact on the quality of the sample collected from that well. Sampling procedures, sample handling and custody, holding times, and collection of field parameters were conducted in accordance with the "Revised Final Sampling and Analysis Plan for Seneca Army Depot Activity (SAP)" (Parsons, 2006c). Samples were collected from the seven wells and submitted to STL for analysis of VOCs by USEPA SW846 Method 8260B, and metals and mercury by USEPA SW846 Method 6010B and 7470A, respectively. One duplicate and MS/MSD were collected at MW11-6. In the field, pH, oxidation-reduction potential (ORP), dissolved oxygen, conductivity, and temperature were measured with a Horiba water quality meter. The turbidity was measured using a Lamotte turbidity meter.

A summary of the groundwater data is presented in **Table 5-1**, and completed groundwater data results are presented in **Appendix J**. Three VOCs (1,1,2-trichloro-1,2,2-trifluoroethane, tetrachloroethene, and trichloroethene) were detected below their respective groundwater action levels. Tetrachloroethene was detected at MW11-6 in the sample and duplicate (2.0 µg/L / 2.1 µg/L) at concentrations below the GA standard of 5 µg/L. Trichloroethene was detected in two wells, MW11-5 (1.4 µg/L) and MW11-6 (3.0 µg/L / 3.2 µg/L), at concentrations below the GA standard of 5 µg/L.

Aluminum was detected above its respective Secondary Drinking Water Regulations (USEPA 82-B-00-001), which is a To Be Considered (TBC) value. Aluminum was detected once at MW11-1 (340 µg/L), which is above the standard of 50 µg/L. The table below indicates that the detected aluminum concentration is less than the SEDA background concentration. Manganese was detected once above the NYSDEC Ambient Water Quality Criteria (AWQS) Class GA (300 µg/L) at a concentration of 341 µg/L (MW11-3). This detection is well below the site background maximum value for

manganese, 1,120 µg/L. Iron was detected three times above the Class GA groundwater standard (300 µg/L), with concentrations of 727 µg/L (MW11-3), 427 µg/L (MW11-1), and 374 µg/L (MW11-7). A comparison of the three metals detected above standards or TBCs with the SEDA background groundwater concentrations is presented below.

Parameter	Maximum Detection (µg/L)	Average / Max. SEDA Background (µg/L)
Aluminum	340	2,730 / 42,400
Iron	727	4,480 / 69,400
Manganese	341	2,24 / 1,120

The table above shows that the metals detected above groundwater standards were consistent with SEDA background values. Based on the data, the groundwater has not been negatively impacted by the presence of the landfill materials and no further monitoring for groundwater is required.

5.2 Routine Inspections

SEAD-11 will be inspected semi-annually to ensure that erosion controls are in place and functioning, until an acceptable grass stand has been established. At this point, erosion controls such as silt fencing will be removed by the Army's Engineer.

A checklist of maintenance inspection elements to be used in the field is provided in **Table 5-2**. Any problems identified during the routine inspections should be noted in the field notebook. These problems should be corrected or disclosed to the SEDA POC as soon as possible.

6.0 CONCLUSIONS AND RECOMMENDATIONS

Based on the analytical results from the final confirmatory sampling and the groundwater sampling, no further action is required at SEAD-11. Therefore, no post-construction activities are anticipated.

Based on the construction work at SEAD-11, the Army has made the following conclusions:

- All landfill material and soil exceeding proposed cleanup goals or project-specific guidance values were removed from the site.
- 32,900 cy of landfill material was excavated and 42,188 tons were disposed as non-hazardous waste at Ontario County Landfill.
- 118 confirmatory samples (plus QA/QC samples) were collected from the surface soil of the excavated site. All final confirmatory samples met the cleanup goals or project-specific guidance values presented in the Final Work Plan. Therefore, the soil at SEAD-11 does not require further action.
- Seven wells were sampled and VOCs were not detected above groundwater standards. The metals concentrations were either below the Class GA groundwater standards or less than the SEDA site-wide background concentrations. No additional monitoring of site wide groundwater will be required.
- The threat posed by the landfill material has been removed from the site. The soil has been sampled and results demonstrate that it meets cleanup goals or project-specific guidance values. The groundwater has met groundwater standards or is consistent with site background concentrations. No further action is required for this site. The Army will proceed with preparing and submitting a No Further Action (NFA) Proposed Plan and Record of Decision (ROD).

Notes:

1. The cleanup goal for VOCs are NYSDEC Technical and Administrative Guidance Memorandum (TAGM) values (HWR-94-4046, Revised January 24, 1994.)
2. Carcinogenic PAHs include benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, benzo(k)fluoranthene, chrysene, dibenz(a,h)anthracene, and indeno(1,2,3-cd)pyrene.
3. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
4. Calcium, chromium, magnesium, potassium, and sodium were omitted from this table since a Region IX PRG value is not available.

NOTES:

-- = No cleanup goal or soil objective available

1. 95th Upper Confidence Limit was calculated from USEPA program, ProUCL Ver 3.00.2, <http://www.epa.gov/esd/tsc/download.htm>

2. The cleanup goal (CUG) values were based on the following criteria:

- a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
- b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
- c. Metals: USEPA Region IX PRGs for soil for a residential scenario.

3. Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.

4. NYSDEC Unrestricted Use Soil Cleanup Objective, Table 375-6.8(a), under Subpart 375-6: Remedial Program Soil Cleanup Objectives.

5. The maximum detected concentration was obtained from the average of the sample and its duplicate.

6. The calculated 95th UCL value is greater than maximum value detected in samples, and therefore has been replaced with the maximum value.

7. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.

Zinc	MG/KG	591	100%	23,500	0	114	114		85.3 J	77.3 J	122 J	81.8 J	81.5 J

NOTES:

- The cleanup goal (CUG) values were based on the the following criteria:
 - VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - Metals: USEPA Region IX PRGs for a soil for a residential scenario.
- Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.
- The maximum detected concentration was obtained from the average of the sample and its duplicate.
- Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- Bolded sample IDs and location IDs and boxed data indicate that cPAH results failed to meet the CUGs at that sample location.

NOTES:

- The cleanup goal (CUG) values were based on the the following criteria:
 - VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - Metals: USEPA Region IX PRGs for a soil for a residential scenario.
- Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.
- The maximum detected concentration was obtained from the average of the sample and its duplicate.
- Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- Bolded sample IDs and location IDs and boxed data indicate that cPAH results failed to meet the CUGs at that sample location.

NOTES:

- The cleanup goal (CUG) values were based on the the following criteria:
 - VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - Metals: USEPA Region IX PRGs for a soil for a residential scenario.
- Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.
- The maximum detected concentration was obtained from the average of the sample and its duplicate.
- Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- Bolded sample IDs and location IDs and boxed data indicate that cPAH results failed to meet the CUGs at that sample location.

NOTES:

- The cleanup goal (CUG) values were based on the the following criteria:
 - VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - Metals: USEPA Region IX PRGs for a soil for a residential scenario.
- Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.
- The maximum detected concentration was obtained from the average of the sample and its duplicate.
- Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- Bolded sample IDs and location IDs and boxed data indicate that cPAH results failed to meet the CUGs at that sample location.

NOTES:

- The cleanup goal (CUG) values were based on the the following criteria:
 - VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - Metals: USEPA Region IX PRGs for a soil for a residential scenario.
- Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.
- The maximum detected concentration was obtained from the average of the sample and its duplicate.
- Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- Bolded sample IDs and location IDs and boxed data indicate that cPAH results failed to meet the CUGs at that sample location.

NOTES:

- The cleanup goal (CUG) values were based on the the following criteria:
 - VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - Metals: USEPA Region IX PRGs for a soil for a residential scenario.
- Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.
- The maximum detected concentration was obtained from the average of the sample and its duplicate.
- Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- Bolded** sample IDs and location IDs and **boxed** data indicate that cPAH results failed to meet the CUGs at that sample location.

NOTES:

1. The cleanup goal (CUG) values were based on the the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. Metals: USEPA Region IX PRGs for a Residential Soil scenario.
2. Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.
3. The maximum detected concentration was obtained from the average of the sample and its duplicate.
4. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
5. Bolded sample IDs and location IDs and boxed data indicate that cPAH results failed to meet the CUGs at that sample location.

NOTES:

- The cleanup goal (CUG) values were based on the the following criteria:
 - VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - Metals: USEPA Region IX PRGs for a Residential Soil scenario.
- Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.
- The maximum detected concentration was obtained from the average of the sample and its duplicate.
- Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- Boxed sample IDs and location IDs and boxed data indicate that cPAH results failed to meet the CUGs at that sample location.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Chrysene	UG/KG	5,500	47%		0	56	119	410 U	400 U	410 U	400 U	390 U
Dibenz(a,h)anthracene	UG/KG	850	30%		22	36	119	410 U	400 U	410 U	400 U	390 U
Indeno(1,2,3-cd)pyrene	UG/KG	2,800	42%		12	50	119	410 U	400 U	410 U	400 U	390 U
BTE (calculated)	MG/KG	8	100%	10	0	119	119	0.48	0.46	0.48	0.46	0.45

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Benzo(b)fluoranthene	UG/KG	7,400	48%		22	57	119	370 U	7400	1300 J	1300 J	5800
Benzo(k)fluoranthene	UG/KG	2,100	19%		0	23	119	370 U	1700 J	380 UJ	380 UJ	2100
Chrysene	UG/KG	5,500	47%		0	56	119	370 U	5500	820	870	4900
Dibenz(a,h)anthracene	UG/KG	850	30%		22	36	119	370 U	850 J	190 J	200 J	700 J
Indeno(1,2,3-cd)pyrene	UG/KG	2,800	42%		12	50	119	370 U	2800 J	530	520	2800
BTE (calculated)	MG/KG	8	100%	10	0	119	119	0.43	6.1	1.1	1.1	6.6

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

BTE (calculated)	MG/KG	8	100%	10	0	119	119	0.44	0.45	0.42	0.44	0.48

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

**Table 3-3B
Summary of cPAH Detects For Final Confirmatory Sampling
SEAD-11 Construction Completion Report
Seneca Army Depot Activity**

SITE LOCATION	SEAD-11

LOCATION ID	111EXPRJ1201
MATRIX	SOIL
SAMPLE ID	111EXPRJ1201
TOP OF SAMPLE	0
BOTTOM OF SAMPLE	0.2
SAMPLE DATE	12/6/2006
QC CODE	SA
STUDY ID	IRA

Parameter	Units	Maximum Detect	Frequency of Detection	CUG Value ²	Number of Exceedances ³	Number of Detects	Number of Analyzed ⁴	Value (Q)
Carcinogenic PAHs								
Benzo(a)anthracene	UG/KG	4,800	49%		18	58	119	27 J
Benzo(a)pyrene	UG/KG	4,500	45%		40	54	119	26 J
Benzo(b)fluoranthene	UG/KG	7,400	48%		22	57	119	28 J
Benzo(k)fluoranthene	UG/KG	2,100	19%		0	23	119	20 J
Chrysene	UG/KG	5,500	47%		0	56	119	32 J
Dibenz(a,h)anthracene	UG/KG	850	30%		22	36	119	370 U
Indeno(1,2,3-cd)pyrene	UG/KG	2,800	42%		12	50	119	22 J
BTE (calculated)	MG/KG	8	100%	10	0	119	119	0.22

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

NOTES:

- The cleanup goal (CUG) values were based on the the following criteria:
 - VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - Metals: USEPA Region IX PRGs for a soil for a residential scenario.
- Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.

Health and Safety:			
PPE - for site.			
Work Performed:			
St. George on site. Performed safety kickoff meeting, distributed gate keys and informed them of Depot security policy for gate access. Discussed planned work activity for the day. Went to SEAD-11 and orientated crew with site. St. George began placing silt fence from west end of landfill proceeding 1000 ft towards the south and around behind the landfill to the east. Clearing brush and trees from south edge. Estimate 2.5 acres require clearing. Excavated 4 test pits (TP 34, 35, 36, & 37) to determine the extent of lead soils failing TCLP.			
One composite sample taken from each test pit. Samples packaged, associated paperwork completed. Samples hand delivered by CM to STL in Amherst for TCLP Pb analysis with 5 day TAT.

Health and Safety:			
Hazards for work being performed today - Equipment and truck movement, brush clearing.			
Work Performed:			
St. George on site. Discussed planned work for day. Performed safety meeting based on work to be performed. Began temporary truck access/load out road on north edge of landfill paralleling Indian Creek Rd. Road constructed using geo-textile fabric, approx. 2 ft of cobble stone and 12 inch steel culvert pipe. Crush and run will be placed on top of the cobble stone. 20 loads (approximately 510 tons) of cobble stone and 2 loads (approximately 50 tons) of crush and run were delivered and placed. Tree and brush removal also performed along the east and south perimeter. Trees and brush relocated to the north east corner of the site for chipping/tub grinding.			
Service/tool truck, second Komatsu dozer, 2 light towers and approximately 100 ft of 12 inch steel culvert pipe delivered.

PPE Level(s): D

2- Cat 325 Excavators fuel truck
 2- Komatsu dozers Service truck

Health and Safety:

0600 hrs. Conducted tool box safety meeting.

Work Performed:

Excavation - continued excavation on the south end, working E and W towards the N. Over size concrete and metal debris sorted/segregated when encountered and placed into separate piles. Excavated material pushed to north end and stockpiled at load out point. Continue to encounter large (3ft D X 3 ft H) white "chalky" cylindrical items. 50 so far. Will sample to determine composition as Steve Absolom does not want to leave them on site. Appears they are fairly brittle and could be pulverized. South end graded and water diversion trench placed on "clean soil" side. Intercept trench placed on top of landfill along excavation face. Two 55 gal drums with waste recovered and placed into salvage drums. Both drums very badly disfigured, rusty, with no labels. One drum (No. 1) contains approximately 20 gallons of a petroleum based liquid. The second drum (No. 2) contains approximately 15 gallons of roofing tar. Both salvage drums were placed in the site drum containment.

3- Komatsu dozers Service truck

Health and Safety:
0600 hrs. Conducted tool box safety meeting.
No perimeter dust monitoring performed due to rain.

Work Performed:
Excavation - excavation activities performed on the SE and SW ends of the landfill. Over size concrete and metal debris sorted/segregated when encountered and placed into separate piles. Metal placed into scrap roll off box. Scrap roll off box exchanged. Encountered increased metal debris concentration at both excavation locations today.
Survey - GPS survey was not conducted for excavation quantity at end of day, but will be performed tomorrow AM.
Sampling - no confirmation or waste sampling performed this day.
Load Out - began load out of stockpiled material. Material loaded into Riccelli trucks by excavator. Material moisture content and density varies with in the stockpile making consistant load weight difficult. 106 loads sent to Ontario Landfill, Flint NY.

2- Cat 325 Excavators Fuel truck 1 Komatsu PC 220 excavator
3- Komatsu dozers Service truck

Health and Safety:
0600 hrs. Conducted tool box safety meeting.
No perimeter dust monitoring performed due to wet conditions.

Work Performed:
Excavation - excavation activities performed on the SW and W ends of the landfill. Over size concrete and metal debris sorted/segregated when encountered and placed into separate piles. Metal placed into scrap roll off box. Roll off box exchanged. Encountered moderate amount of metal and large concrete.
Survey - GPS survey conducted this AM for 11-8 excavation quantity and at the end of today.
Sampling - 8 confirmation, 1- MS, 1- MSD, 1- Dup, and 1- Waste Characterization sample collected today.
Load Out - continued load out of stockpiled material. Material loaded into Riccelli trucks by excavator(s).
Low material density making consistent truck weight difficult. Trucks are being loaded to near capacity. 129 loads sent to Ontario Landfill, Flint NY.

2K gal. Water Truck Pri-Max Shredder	

Health and Safety:
 0600 hrs. Conducted tool box safety meeting.
 No perimeter dust monitoring performed due to wet site conditions.

Work Performed:
Excavation - excavation activities performed on the S, SW, and E ends of the landfill. Over size concrete and metal debris sorted/segregated when encountered and placed into separate piles. Metal placed into scrap roll off box. Recovered remnants of roofing tar drum and placed into salvage drum. Most of the metal was gone. Remaining metal did not have any markings of any kind. Drum placed in drum containment area. Shredded approximately 50 yards of wood debris and also test shredded 2 of the calcium sulfate blocks to see how they would shred and if there was going to be a dust issue. No dust issue observed. Blocks shred faster if they are pre broken by excavator as they tend to roll in the shredder if not broken prior to loading. Two loads of run of crush delivered and placed on truck access/loadout road for minor repairs due to wet site conditions.
Survey - GPS survey was not conducted for excavation quantity.
Sampling - no sampling performed. Informed that samples shipped on 11/17 for 11/18 delivery did not arrive at lab until today. VOCs have to be re-sampled as hold times were exceeded due to late delivery.
Load Out - continued load out of stockpiled material. Material loaded into Riccelli trucks by excavator(s). 117 loads sent to Ontario Landfill, Flint NY. Also see truck and disposal log.

Health and Safety:
 0600 hrs. Conducted tool box safety meeting.
 No perimeter dust monitoring performed due to wet site conditions.

Work Performed:
Excavation - excavation activities performed on the E ends of the landfill. Over size concrete and metal debris sorted/segregated when encountered and placed into separate piles. Metal placed into scrap roll off box.
 Excavation on the North and NE ends of the site slow due to buried phone cable. Cable depth varies and not straight. Hit cable several times resulting in minor damage to outer cable jacket. Phone company to be contacted to inspect and make repairs as necessary. Consolidated calcium blocks (approx 150 cu yds) and processed through the shredder. Material mixed in with soil & debris. Cut off drainage culvert at RR tracks and Indian Creek Rd and redirected water flow along the east and south perimeter of the landfill.
Survey - GPS survey was not conducted for excavation quantity.
Sampling - Collected 11 confirmation samples.
Load Out - resumed load out of landfill soil and debris. 59 loads sent to Ontario Landfill, Flint NY.

Health and Safety:
 0600 hrs. Conducted tool box safety meeting.
 No perimeter dust monitoring performed due to wet site conditions.

Work Performed:
Excavation - excavation activities performed on the E ends of the landfill. Over size concrete and metal debris sorted/segregated when encountered and placed into separate piles. Metal placed into scrap roll off box.
 Main focus of the day was burying stockpiled concrete on the west end. Phone line repaired by Ontario Trumansburg Telephone. No wires affected. Asked how they wanted phone cable to lie and told to bury in shallow 12 to 18 inch trench.
Survey - GPS survey was conducted for excavation quantity.
Sampling -4 samples + dup/MS/MSD collected. Today's samples and samples from 11/27 sent to lab.
Load Out - no load out activities due to scheduled depot deer hunting.

PPE Level(s): D

Health and Safety:
0500 hrs. Conducted tool box safety meeting.
No perimeter dust monitoring performed due to wet site conditions.

Work Performed:
Excavation - excavation activities performed on the north end of the landfill under stockpile ar and metal debris sorted/segregated when encountered and placed into separate piles. Metal placed into scrap roll off box. Concrete buried on site. Completed visual contamination removal and load out of stockpiled materials. 2 excavators, one dozer, and shredder hand cleaned and demobilized. Repaired road edges along depot truck route by filling with stone and rolling tire ruts flat. Received 22 loads of sand and placed on NE edge of site. Re-established drainage swale along road edge. Graded areas and completed seed and mulch cover.
Continued and completed (pending confirmation analysis) truck load out. Loaded 104 trucks for disposal at Ontario Landfill.
Survey - GPS survey was not conducted for excavation quantity.
Sampling - 11 confirmatory samples taken (8 plus dup/ms/msd). See sampling log.
Load Out - 104 trucks loaded and disposed of at Ontario Landfill, Flint NY. (see truck and disposal log).

Health and Safety:
 0600 hrs. Safety meeting conducted.

Work Performed:
Survey - no survey performed.
Sampling - no sampling performed.
Excavation - located excavation area with St. George crew. Excavated affected areas using hydraulic excavator. Material placed directly into a small 6 cu yd track dump truck. Material transported up to the existing load out road and dumped into the bucket of a 4 cu yd wheel loader. Loader then placed material into dump trucks. 9 truck loads approximately 135 cu yds were removed from the "D1" area and one load approximately 15 cu yds were removed from the "H4" area. Areas were backfilled with 10 loads of imported sand from Riccelli and straw covered. Track ruts from heavy equipment were smoothed and also straw covered. Equipment cleaned and demobilized late evening.

RE: Scad-11 Seneca Army Depot

Order No.: U0610131

Dear Mr. Richard Riccelli:

Upstate Laboratories, Inc. received 8 sample(s) on 10/6/06 for the analyses presented in the following report.

All analytical results relate to the samples as received by the laboratory.

All analytical data conforms with standard approved methodologies and quality control. Our quality control narrative will be included should any anomalies occur.

We have included the Chain of Custody Record as part of your report. You may need to reference this form for a more detailed explanation of your samples. Samples will be disposed of approximately one month from final report date.

Should you have any questions regarding these tests, please feel free to give us a call.

Thank you for your patronage.

Sincerely,

UPSTATE LABORATORIES, INC.

AJS (PFF)
Anthony J. Scala
President/CEO

Confidentiality Statement: This report is meant for the use of the intended recipient. It may contain confidential information, which is legally privileged or otherwise protected by law. If you have received this report in error, you are strictly prohibited from reviewing, using, disseminating, distributing or copying the information.

Vanadium	MG/KG	31.6	100%	78.2	0	114	114	21.5 J	17.4 J	18.7 J	23.5	
Zinc	MG/KG	591	100%	23,500	0	114	114	67.8 J	75.6 J	76.6 J	95.4 J	

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

- Notes:
- (1) Maximum value came from sample-duplicate pair averaged value.
 - (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
 - (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
 - (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
 - (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
 - (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected
 J = the reported value is an estimated concentration
 UJ = the compound was not detected; the associated reporting limit is approximate
 R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Zinc	MG/KG	591	100%	23,500	0	114	114		86.3 J			85.9 J

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

SEAD-11 Construction Completion Report
Seneca Army Depot Activity

Parameter	Units	Maximum Value	Frequency of Detection	Cleanup Goal ²	Number of Exceedances ³	Number of Times Detected	Number of Samples Analyzed ⁴	Value (Q)	Value (Q)	Value (Q)	Value (Q)	Value (Q)
Silver	MG/KG	2.2	5%	390	0	6	114		0.16 U			0.18 U
Sodium	MG/KG	164	75%		NA	86	114		50.4 J			56.4 J
Thallium	MG/KG	2.1	25%	5.2	0	28	114		0.72 U			0.81 U
Vanadium	MG/KG	31.6	100%	78.2	0	114	114		19			27.2
Zinc	MG/KG	591	100%	23,500	0	114	114		87.6 J			160 J

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Zinc	MG/KG	591	100%	23,500	0	114	114	108 J	143 J	79.1 J	93.7 J	77.7 J

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Thallium	MG/KG	2.1	25%	5.2	0	28	114	0.6 U	0.79 U	0.78 U		0.77 U
Vanadium	MG/KG	31.6	100%	78.2	0	114	114	15.4 J	23 J	19.8 J		19.6 J
Zinc	MG/KG	591	100%	23,500	0	114	114	61.7 J	94.4 J	90.3 J		93.3 J

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

SEAD-11 Construction Completion Report
Seneca Army Depot Activity

Parameter	Units	Maximum Value	Frequency of Detection	Cleanup Goal ²	Number of Exceedances ³	Number of Times Detected	Number of Samples Analyzed ⁴	Value (Q)	Value (Q)	Value (Q)	Value (Q)	Value (Q)
Silver	MG/KG	2.2	5%	390	0	6	114	0.15 UJ		0.59 U	0.09 U	0.54 U
Sodium	MG/KG	164	75%		NA	86	114	42.6 J		42.8 J	45.4 U	31.6 U
Thallium	MG/KG	2.1	25%	5.2	0	28	114	1.2 J		0.78 U	1.2 U	0.72 U
Vanadium	MG/KG	31.6	100%	78.2	0	114	114	13 J		20.2 J	19.7 J	18.9 J
Zinc	MG/KG	591	100%	23,500	0	114	114	75.5 J		96.9 J	76.2 J	85.4 J

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Notes:

- (1) Maximum value came from sample-duplicate pair averaged value.
- (2) The cleanup goal (CUG) values were based on the following criteria:
 - a. VOCs: NYSDEC Technical and Administrative Guidance Memorandum (TAGM) HWR-94-4046, Revised January 24, 1994.
 - b. cPAHs: Benzo(a)pyrene Toxicity Equivalence (BTE) calculation.
 - c. Metals: USEPA Region IX PRGs for soil for a residential scenario.
 - d. Since the PRGs for arsenic and iron were lower than the maximum SEDA site-wide background values, the CUGs for these parameters were replaced with the SEDA maximum background value.
- (3) The number of exceedances is not applicable (NA) for parameters without site-specific CUGs.
- (4) Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table. Note that this table includes data from all confirmatory soil sample collected, including failed samples.
- (5) A bolded and outlined cell indicates a concentration that exceeded the site-specific CUGs.
- (6) A shaded, boxed sample indicates that the soil represented by the sample has been removed from the site. Therefore, the analytical results for the shaded sample are not characteristic of current site conditions.

U = compound was not detected

J = the reported value is an estimated concentration

UJ = the compound was not detected; the associated reporting limit is approximate

R = the analytical result was rejected during data validation.

Bogolin, Tony

From: Liu, Chunhua [Chunhua.Liu@parsons.com]
Sent: Wednesday, November 29, 2006 9:55 AM
To: Bogolin, Tony
Cc: Wasserman, Beth; Travers, Jacqueline
Subject: RE: Seneca SEAD-11 data - A06-E028 sample ID change

Tony:

Would you please make the following changes of sample IDs for SDG A06-E028 and go ahead produce the hard copy? Please also make changes on the COC. Thanks.

Change 11EXELF301, 11EXELF401, 11EXELF501, 11EXELF601, 11EXELF701, and 11EXELF801 to "11EXFLE301, 11EXFLE401, 11EXFLE501, 11EXFLE601, 11EXFLE701, and 11EXFLE801" (basically change the middle "ELF" part to "FLE")

Please send me a copy of the login sheet for the samples you are receiving today.

Thanks.

-Chunhua

Sent: Tuesday, November 28, 2006 4:12 PM
To: Liu, Chunhua
Subject: Seneca SEAD-11 data

Chunhua;

There is a lot of sample data in this set. If you would email me back then I will know you got it.

I spoke with Ben in the field and he said the sample collected at 9:56 was collected today and the earliest sample collected yesterday was around 1PM so that should not be a problem with the Encore samples.

Tony <<SDOC4836.pdf>>

Subject: RE: SEAD-11 samples collected yesterday

Thanks!

Does that complete the sampling or is there more to come?

To: Bogolin, Tony
Cc: Wasserman, Beth; Mcallister, Benedict
Subject: RE: SEAD-11 samples collected yesterday

Tony:

25 confirmatory soil samples from SEAD-11 are on the way, you should be receiving them in two coolers today. Please keep samples in each cooler as a individual SDG (do not combine them into 1 SDG). In addition, there is a typo for the second last sample in Cooler #1, would you please change the COC so the sample read "11EXPRJ901" (as versus 11ESPRJ901)? We request 3-day TAT for these samples; so the results are due next Tuesday (12/12/06).

Please send me the login sheet when it's ready.

Thank you!

-Chunhua Liu

From: Liu, Chunhua [mailto:Chunhua.Liu@parsons.com]
Sent: Thursday, December 07, 2006 10:18 AM
To: Bogolin, Tony
Cc: Wasserman, Beth
Subject: RE: SEAD-11 samples

Tony:

Please add 11EXPRJ1001 on the COC (for collar #1) and include in the analysis. The field person made a mistake not including it on the COC.

Thanks.

Bogolin, Tony

From: Liu, Chunhua [Chunhua.Liu@parsons.com]
Sent: Friday, December 08, 2006 10:18 AM
To: Bogolin, Tony
Subject: Analyses for drum samples

Tony:

The following analyses are required for the two drum samples:

Ignitability
pH
Reactivity
PCBs

Thanks.

Bogolin, Tony

From: Liu, Chunhua [Chunhua.Liu@parsons.com]
Sent: Monday, December 18, 2006 11:09 AM
To: Bogolin, Tony
Cc: Wasserman, Beth
Subject: RE: SEAD-11 samples update

Tony:

For the Friday samples you received, please make the following changes on the COC:

1. All samples will be requested for cPAH analysis only.
2. Change "11EXFLD001" to "11EXFLC001"
3. Change "11EXFLE001" to "11EXFLD001"

Let me know if you have any questions. Thanks.

-Chunhua

NON-CONFORMANCE SUMMARY

Job#: A06-D138STL Project#: NY5A9493.1Site Name: SENECA ADGeneral Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-D138

Sample Cooler(s) were received at the following temperature(s); 2@2.0 °C
All samples were received in good condition.

GC/MS Volatile Data

For Method 8260, the compound Methylene Chloride was detected in Method Blank VBLK86 at a concentration above the project established reporting limit. Samples had positive results for Methylene Chloride at less than ten times that of the Method Blank concentration. These positive results for Methylene Chloride may potentially be due to laboratory contamination and should be evaluated accordingly. All associated sample detections were flagged with a "B".

Initial calibration standard curve A6I0002040 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for compounds 2-Butanone, trans-1,3-Dichloropropene, 1,2-Dibromo-3-Chloropropane, and Methyl Acetate. The overall mean RSD of all compounds is 6.78%.

GC/MS Semivolatile Data

The surrogate concentration of Nitrobenzene-D5 were diluted below the linear range of the calibration curve in sample 11EXFLC601 DL.

The chromatographic peaks for Benzo(b)fluoranthene and Benzo(k)fluoranthene could not be resolved for samples 11EXFLA501, 11EXFLA701, 11EXFLB601, 11EXFLB801 and 11EXFLC901 due to the sample matrix. The final value is reported as Benzo(b)fluoranthene in this data package but should be considered an and/or value for both compounds.

Metals Data

The recoveries of sample 11EXFLA501 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limits for Aluminum(MSD), Antimony, Arsenic, Barium(MSD), Beryllium, Cadmium, Calcium, Chromium, Cobalt, Copper, Lead(MSD), Magnesium, Nickel, Potassium, Selenium, Silver(MSD), Sodium, Thallium, Vanadium, Zinc(MSD). However, the LCS was acceptable.

The recoveries of sample 11EXFLA501 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Manganese(MS) and below the quality control limits for Iron and Manganese(MSD). The sample result is more than four times greater than the spike added. The LCS was acceptable.

The Serial Dilution of sample 11EXFLA501 exceeded the quality control limits for Aluminum, Barium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Vanadium, and Zinc. However, the Post Spike of this sample was compliant. Therefore, no corrective action is necessary.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

NON-CONFORMANCE SUMMARY

Job#: A06-D373STL Project#: NY5A9493.1Site Name: SENECA ADGeneral Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-D373

Sample Cooler(s) were received at the following temperature(s); 2@5.7 °C
Sample 11EXFLE801 was received but not listed on the chain-of-custody (COC) form. The client was notified and instructed the laboratory that this sample was recollected on 11/10/06. No analysis were performed on this sample.

Sample 11EXWC01 was listed for sulfide analysis on the COC form. The client informed the lab that this should be sulfate analysis, instead.

GC/MS Volatile Data

The spike recovery of the analytes 1,1-Dichloroethene, Trichloroethene, Benzene, Toluene and Chlorobenzene in the Matrix Spike and in the Matrix Spike Duplicate of sample 11EXFLE1001 fell below quality control limits. The Matrix Spike Blank recoveries were compliant, so no corrective action was performed.

Initial calibration standard curve A6I0002040-1 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for several compounds. However, the overall mean RSD of all compounds is 6.78%.

Initial calibration standard curve A6I0002134-1 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for surrogates Toluene-D8, p-Bromofluorobenzene and 1,2-Dichloroethane-D4. However, the overall mean RSD of all compounds is 8.09%.

GC/MS Semivolatile Data

No deviations from protocol were encountered during the analytical procedures.

GC Extractable Data

No deviations from protocol were encountered during the analytical procedures.

Metals Data

The recoveries of sample 11EXFLE1001 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limits for Chromium, Lead, Potassium(MS), and Zinc(MSD). Sample matrix is suspect. However, the LCS was acceptable.

The recoveries of sample 11EXFLE1001 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Iron and below the quality control limits for Calcium, Magnesium, and Manganese. The sample result is more than four times greater than the spike added. The RPD of sample 11EXFLE1001 Matrix Spike and Matrix Spike Duplicate exceeded the quality control limits for Calcium and Iron. The LCS is acceptable.

The recoveries of sample 11EXFLE1001 Post Spike exhibited results below the quality control limits for Calcium, Iron, Magnesium, and Manganese. However, the Serial Dilution for these elements was compliant. Therefore, no corrective action is necessary.

The analyte Barium was detected in the Extractor Blank at a level above the project established reporting limit. However, the sample had a level of Barium greater than ten times that of the Extractor Blank value, therefore, no corrective action was necessary.

The Serial Dilution of sample 11EXFLE1001 exceeded the quality control limits for Nickel and Zinc. However, the Post Spike of this sample for those elements were compliant. Therefore, no corrective action is necessary.

Wet Chemistry Data

The U.S. EPA has determined the applicability of the Reactive Cyanide and Sulfide tests to be limited in part due to the poor recoveries obtainable with their procedures. The April 1998 memorandum entitled 'Withdrawal of Cyanide and Sulfide Reactivity Guidance' details the justification for this determination. Therefore, in conjunction with these test results, the U.S. EPA recommends the data user apply process or waste knowledge to determine if their waste exhibits the characteristic of reactivity.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

NON-CONFORMANCE SUMMARY

Job#: A06-D461STL Project#: NY5A9493.1Site Name: SENECA ADGeneral Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-D461

Sample Cooler(s) were received at the following temperature(s); 2.0 °C
All samples were received in good condition.

GC/MS Volatile Data

Initial calibration standard curve A6I0002155-1 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for the compound Methylene Chloride and the surrogate 1,2-Dichloroethane-D4. However, the overall mean RSD of all compounds is 7.75%.

GC/MS Semivolatile Data

The chromatographic peaks for Benzo(b)fluoranthene and Benzo(k)fluoranthene could not be resolved for sample 11EXFLC201 due to the sample matrix. The final value is reported as Benzo(b)fluoranthene in this data package but should be considered an and/or value for both compounds.

Metals Data

The recoveries of sample 11EXFLC201 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Barium(MS) and below the quality control limits for Antimony and Potassium. Sample matrix is suspect. The RPD of sample 11EXFLC201 Matrix Spike and Matrix Spike Duplicate exceeded the quality control limits for Barium. However, the LCS was acceptable.

The recoveries of sample 11EXFLC201 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limits for Aluminum(MS) and above the quality control limits for Manganese and Iron(MSD). The sample result is more than four times greater than the spike added. The RPD of sample 11EXFLC201 Matrix Spike and Matrix Spike Duplicate exceeded the quality control limits for Manganese. The LCS is acceptable.

The recoveries of sample 11EXFLC201 Post Spike exhibited results below the quality control limits for Iron and Manganese. However, the Serial Dilution for this sample for Iron and Manganese were compliant. Therefore, no corrective action is necessary.

The Serial Dilution of sample 11EXFLC201 exceeded the quality control limits for Cobalt, Nickel, Potassium, and Zinc. However, the Post Spike of this sample was compliant for the Cobalt, Nickel, Potassium, and Zinc. Therefore, no corrective action is necessary.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

NON-CONFORMANCE SUMMARY

Job#: A06-D710STL Project#: NY5A9493.1Site Name: SENECA ADGeneral Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-D710

Sample Cooler(s) were received at the following temperature(s); 3.6 °C
All samples were received in good condition.

GC/MS Volatile Data

Initial calibration standard curve A6I0002155 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for Methylene Chloride and the surrogate compound 1,2-Dichloroethane-d4. However, the overall mean RSD of all compounds is 7.75%.

GC/MS Semivolatile Data

The chromatographic peaks for Benzo(b)fluoranthene and Benzo(k)fluoranthene could not be resolved for sample 11EXPRB201 due to the sample matrix. The final value is reported as Benzo(b)fluoranthene in this data package but should be considered an and/or value for both compounds.

Metals Data

The recoveries of sample 11EXPRB201 Post Spike exhibited results below the quality control limits for Iron and Manganese. However, the Serial Dilution of this sample was compliant. Therefore, no corrective action is necessary.

The CCB, analyzed at (22:15), exhibited results above the detection limits for Iron and Manganese. However, the samples were bracketed by compliant CCB's, therefore, no corrective action was necessary.

The analyte Iron was detected in a CCB (analyzed at 00:16) at a level above the project established reporting limit. However, all samples had levels of Iron greater than ten times that of the CCB value, therefore, no corrective action was necessary.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

NON-CONFORMANCE SUMMARY

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-D871

Sample Cooler(s) were received at the following temperature(s); 2.3 °C

Samples were received past the EPA-recommended holding time of 48 hours for volatile organics by Method 8260, using prep method 5035. The client was notified and a re-sampling event has been scheduled to provide additional volume for this analysis. Results of the re-sampling event will be provided under separate cover.

GC/MS Semivolatile Data

The chromatographic peaks for Benzo(b)fluoranthene and Benzo(k)fluoranthene could not be resolved for samples 11EXFLC301 and 11EXFLD201 due to the sample matrix. The final value is reported as Benzo(b)fluoranthene in this data package but should be considered an and/or value for both compounds.

Metals Data

The recoveries of sample 11EXFLC401 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limits for Aluminum, Iron, and Manganese (MS). The sample result is more than four times greater than the spike added. The LCS is acceptable.

The recoveries of sample 11EXFLC401 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limits for Barium, Magnesium, Potassium (MS) and Zinc. Sample matrix is suspect. However, the LCS was acceptable.

The recovery of sample 11EXFLC401 Post Spike exhibited a result below the quality control limits for Iron. However, the Serial Dilution for this sample for Iron was compliant. Therefore, no corrective action is necessary.

The CCV's, analyzed at (16:44 and 17:47), exhibited results above the quality control limits for Potassium. However, the samples were bracketed by compliant CCV's, therefore, no corrective action was necessary.

The Serial Dilution of sample 11EXFLC401 exceeded the quality control limits for Nickel. However, the Post Spike of this sample was compliant for Nickel. Therefore, no corrective action is necessary.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Sample Receipt Comments

A06-E028

Sample Cooler(s) were received at the following temperature(s); 4.0 °C
Sample 11EXFLC401V was received with only one encore volume for 8260.

Samples with "ELF" designation in the client sample ID were changed to "FLE" at the direction of the client, Chunhua Liu.

GC/MS Volatile Data

Initial calibration standard curve A6I0002164-1 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for compounds Methylene Chloride and Bromoform and surrogates p-Bromofluorobenzene and 1,2-Dichloroethane-D4. However, the overall mean RSD of all compounds is 7.90%.

Initial calibration standard curve A6I0002155-1 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for the compound Methylene Chloride and the surrogate 1,2-Dichloroethane-D4. However, the overall mean RSD of all compounds is 7.75%.

GC/MS Semivolatile Data

No deviations from protocol were encountered during the analytical procedures.

Metals Data

The post spike recoveries of sample 11EXFLE301 exhibited results below the quality control limits for Aluminum, Iron, and Manganese. However, the LCS was acceptable.

The Serial Dilution of sample 11EXFLE301 exceeded the quality control limits for Aluminum, Barium, Calcium, Chromium, Cobalt, Copper, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Vanadium, and Zinc. However, the LCS was acceptable.

The analyte Lead was detected in the TCLP Extractor Blank at a concentration above STL's standard quantitation limit. The sample associated with the blank was evaluated and determined to be at least five times less than the TCLP Regulatory Limit. The sample data was therefore accepted and no corrective action was performed.

Wet Chemistry Data

No deviations from protocol were encountered during the analytical procedures.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

Sample Receipt Comments

A06-E239

Sample Cooler(s) were received at the following temperature(s); 4.0 °C

All samples were received in good condition.

GC/MS Volatile Data

The recovery of surrogate p-Bromofluorobenzene in the Matrix Spike and in the Matrix Spike Duplicate of sample 11EXFLG1101 fell below quality control limits, thus indicating potential matrix interference. The recovery of this surrogate was also low but within QC limits in the base sample 11EXFLG1101.

The spike recovery of the analytes Trichloroethene, Benzene, Toluene and Chlorobenzene in the Matrix Spike and in the Matrix Spike Duplicate of sample 11EXFLG1101 fell below quality control limits. The Matrix Spike Blank recoveries were compliant, so no corrective action was performed.

Initial calibration standard curve A6I0002155 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for the compound Methylene Chloride and the surrogate compound 1,2-Dichloroethane-d4. However, the overall mean RSD of all compounds is 7.75%.

Initial calibration standard curve A6I0002164 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for compounds Methylene Chloride and Bromoform and the surrogate compounds 1,2-Dichloroethane-d4 and p-Bromofluorobenzene. However, the overall mean RSD of all compounds is 7.90%.

GC/MS Semivolatile Data

The relative percent difference between the Matrix Spike and the Matrix Spike Duplicate of sample 11EXFLG1101 exceeded quality control criteria for several analytes, though all individual recoveries are compliant. No action required.

The chromatographic peaks for Benzo(b)fluoranthene and Benzo(k)fluoranthene could not be resolved for sample 11EXFLF901 due to the sample matrix. The final value is reported as Benzo(b)fluoranthene in this data package but should be considered an and/or value for both compounds.

Metals Data

The recoveries of sample 11EXFLG1101 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limits for Barium(MS) and Antimony(MSD), Chromium(MSD), Lead(MSD), Nickel(MSD), Potassium(MSD), and Zinc(MSD). Sample matrix is suspect. However, the LCS was acceptable.

The recoveries of sample 11EXFLG1101 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Calcium(MS), Manganese(MSD), and Iron(MS) and below the quality control limits for Magnesium, Manganese(MS), Aluminum(MSD), Calcium(MSD), Iron(MSD). The sample result is more than four times greater than the spike added. The RPD of sample 11EXFLG1101 Matrix Spike and Matrix Spike Duplicate exceeded the quality control limits for Calcium, Iron, Magnesium, and Manganese. The LCS is acceptable.

The recoveries of sample 11EXFLG1101 Post Spike exhibited results below the quality control limits for Calcium and Manganese. However, the LCS was acceptable.

The Serial Dilution of sample 11EXFLG1101 exceeded the quality control limits for Aluminum, Barium, Calcium, Chromium, Cobalt, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Vanadium, and Zinc. However, the LCS was acceptable.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. Sample Receipt Comments

A06-E646

Sample Cooler(s) were received at the following temperature(s); 2@2.0 °C
All samples were received in good condition.

GC/MS Volatile Data

The recovery of the analytes Benzene, Chlorobenzene, Toluene and Trichloroethene in the Matrix Spike of sample 11EXPRG201 exceeded quality control limits. The Matrix Spike Blank recoveries were compliant, so no corrective action was performed.

Initial calibration standard curve A6I0002164 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for compounds Methylene Chloride, Bromoform, p-Bromofluorobenzene, and 1,2-Dichloroethane-d4. However, the overall mean RSD of all compounds is 7.90%.

Initial calibration standard curve A6I0002155 exhibited a percent Relative Standard Deviation (%RSD) of greater than 15% for the compounds Methylene Chloride and 1,2-Dichloroethane-d4. However, the overall mean RSD of all compounds is 7.75%.

GC/MS Semivolatile Data

The chromatographic peaks for Benzo(b)fluoranthene and Benzo(k)fluoranthene could not be resolved for samples 11EXPRB101, 11EXPRF201 and 11EXPRG202 due to the sample matrix. The final value is reported as Benzo(b)fluoranthene in this data package but should be considered an and/or value for both compounds.

Metals Data

The recovery of sample 11EXPRG201 Matrix Spike exhibited a result below the quality control limits for Manganese. The recoveries of sample 11EXPRG201 Matrix Spike Duplicate exhibited results above the quality control limits for Iron and Manganese. The sample results are more than four times greater than the spike added. The RPD between sample 11EXPRG201 Matrix Spike and Matrix Spike Duplicate exceeded the quality control criteria for Manganese. The LCS was acceptable.

The recovery of sample 11EXPRG201 Matrix Spike exhibited a result above the quality control limits for Calcium. Sample matrix is suspect. However, the LCS was acceptable.

The CCV, analyzed at 10:49, exhibited results below the quality control limits for all elements. However, the samples were bracketed by compliant CCV's, therefore, no corrective action was necessary.

The CCV, analyzed at 17:17, exhibited a recovery above quality control limits for Thallium. However, since the target analyte was non-detect in the associated samples 11EXPRB101 and 11EXPRC101 and the high recoveries would yield a high bias, no further corrective action was necessary.

The Serial Dilution of sample 11EXPRG201 exceeded the quality control limits for Chromium, Cobalt, Iron, Lead, Vanadium, and Zinc. However, the Post Spike of this sample was compliant. Therefore, no corrective action was necessary.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. The final value is reported as Benzo(b)fluoranthene in this data package but should be considered an and/or value for both compounds.

GC Extractable Data

For method 8082, the recovery of surrogate Decachlorobiphenyl in sample 11DR01 is outside of established quality control limits due to the sample matrix. The recovery of surrogate Tetrachloro-m-xylene is within quality control limits; no corrective action is required.

Sample 11DR01 will be prepped as an oil in batch A6B31746.

Metals Data

The recoveries of sample 11EXFLF801 Matrix Spike and Matrix Spike Duplicate exhibited results above the quality control limits for Calcium and below the quality control limits for Antimony and Potassium(MSD). Sample matrix is suspect. However, the LCS was acceptable.

The recoveries of sample 11EXFLF801 Matrix Spike and Matrix Spike Duplicate exhibited results below the quality control limits for Aluminum, Iron and above the quality control limits for Manganese. The sample result is more than four times greater than the spike added. The LCS is acceptable.

The recoveries of sample 11EXFLF801 Post Spike exhibited results below the quality control limits for Aluminum, Iron, and Manganese. However, the LCS was acceptable.

The Serial Dilution of sample 11EXFLF801 exceeded the quality control limits for Aluminum, Barium, Calcium, Chromium, Cobalt, Iron, Lead, Magnesium, Manganese, Nickel, Potassium, Vanadium, and Zinc. However, the LCS was acceptable.

Wet Chemistry Data

The U.S. EPA has determined the applicability of the Reactive Cyanide and Sulfide tests to be limited in part due to the poor recoveries obtainable with their procedures. The April 1998 memorandum entitled 'Withdrawal of Cyanide and Sulfide Reactivity Guidance' details the justification for this determination. Therefore, in conjunction with these test results, the U.S. EPA recommends the data user apply process or waste knowledge to determine if their waste exhibits the characteristic of reactivity.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

NON-CONFORMANCE SUMMARY

Job#: A06-F137STL Project#: NY5A9493.1Site Name: SENECA ADGeneral Comments

The enclosed data may or may not have been reported utilizing data qualifiers (Q) as defined on the Data Comment Page.

Soil, sediment and sludge sample results are reported on "dry weight" basis unless otherwise noted in this data package.

According to 40CFR Part 136.3, pH, Chlorine Residual, Dissolved Oxygen, Sulfite, and Temperature analyses are to be performed immediately after aqueous sample collection. When these parameters are not indicated as field (e.g. pH-Field), they were not analyzed immediately, but as soon as possible after laboratory receipt.

Sample dilutions were performed as indicated on the attached Dilution Log. The rationale for dilution is specified by the 3-digit code and definition.

Sample Receipt Comments

A06-F137

Sample Cooler(s) were received at the following temperature(s); 2.6 °C
All samples were received in good condition.

GC/MS Semivolatile Data

No deviations from protocol were encountered during the analytical procedures.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

NON-CONFORMANCE SUMMARY

Sample Receipt Comments

A07-0153

Sample Cooler(s) were received at the following temperature(s); 2.0 °C
All samples were received in good condition.

GC/MS Semivolatile Data

The chromatographic peaks for Benzo(b)fluoranthene and Benzo(k)fluoranthene could not be resolved for samples 11EXFLH402 and 11EXPRI402 due to the sample matrix. The final value is reported as Benzo(b)fluoranthene in this data package but should be considered an and/or value for both compounds.

The results presented in this report relate only to the analytical testing and condition of the sample at receipt. This report pertains to only those samples actually tested. All pages of this report are integral parts of the analytical data. Therefore, this report should be reproduced only in its entirety.

APPENDIX G
DATA VALIDATION

APPENDIX G: DATA VALIDATION

This appendix presents an overall summary of data usability for the SEAD-11 soil confirmatory samples collected during the Remedial Action during November and December 2006. The data reviewed include 16 sample delivery groups (SDG) submitted by Severn Trent Laboratories, Inc. (STL Buffalo) in Amherst, NY (A06-D138, A06-D373, A06-D461, A06-D710, A06-D871, A06-E028, A06-E032, A06-E239, A06-E394, A06-E553, A06-E646, A06-E648, A06-E745, A06-F137, A06-F365, and A07-O153). **Table G-1** provides a summary of the data that have been validated. In summary, the following confirmatory samples were submitted for analysis:

- 121 confirmatory samples from SEAD-11 for volatile organic carbon (VOC) analyses;
- 134 confirmatory samples from SEAD-11 for carcinogenic Polycyclic Aromatic Hydrocarbons (PAH) analysis;
- 122 confirmatory samples from SEAD-11 for metal analyses (one sample for lead analysis only).

All VOC confirmatory samples collected during the remedial action were analyzed in accordance with the USEPA SW-846 Method 8260B. Each soil VOC sample was collected in two encore samplers and one jar sampler. All VOC encore samples were processed in the laboratory in accordance with the SW846 5035A. Carcinogenic polycyclic aromatic hydrocarbons (PAH) samples collected for the remedial action were analyzed using the USEPA SW-846 Method 8270C. Metal analyses were conducted in accordance with the USEPA SW-846 Method 6010B.

It should be noted that there are some other samples collected under the remedial action program (e.g., disposal material waste characterization samples). Validation for these sample results was not required for the project and therefore these sample results are not discussed in this appendix.

Data validation was performed by Parsons' chemist and completed under the guidelines set forth in the Region 2 RCRA and CERCLA Data Validation Standard Operating Procedures (SOPs) with consideration for the site-specific quality assurance requirements presented in the Final Interim Removal Action Work Plan (Parsons, 2006) and the general quality assurance requirements presented in the Generic Site-Wide Sampling and Analysis Plan (SAP) for the Seneca Army Depot Activity (Parsons, 2006). The Region 2 SOPs used for data validation include Evaluation of Metals Data for the Contract Laboratory Program (CLP; SOP HW-2), Validating Volatile Organic Compounds by SW-846 Method 8260B (HW-24), Validating Semivolatile Organic Compounds by SW-846 Method 8270 (HW-22), and CLP Organics Data Review and Preliminary Review, and Training Course for CLP Organic Data Validation. If guidance could not be found in the above SOPs, the project SAP, or the Seneca Site-Wide SAP, requirements set forth in the USEPA CLP, the New York State Department of Environmental Conservation (NYSDEC) Contract Laboratory Program Analytical Services Protocol (ASP), USEPA (2004) Contract Laboratory Program National Functional

Guidelines for Inorganic Data Review; and USEPA (1999) Contract Laboratory Program National Functional Guidelines for Organic Data Review were considered during data validation. The data evaluation included performance of a completeness audit and a review of the following parameters, where applicable: holding times, sample preservations, percentage of solids, quality control (QC) results of calibration, equipment/rinsate blanks, method blanks, matrix spike/matrix spike duplicate (MS/MSD) analyses, laboratory control sample (LCS) performances, laboratory and field duplicates, surrogate recoveries, instrument performance, chromatograms and mass spectrums, internal standard recovery, reporting limits, Inductively Coupled Plasma (ICP) serial dilution, interference check sample results, and ICP linear range. In performing the data validation, the raw data were spot-checked in accordance with the Region 2 SOPs to evaluate whether there was any transcription error.

Data qualifiers were added to the data based on the data validation and Attachment G-1 presents definition of data qualifiers.

1. OVERALL SUMMARY OF DATA USABILITY

The data reviewed were determined to be usable except for the data presented in **Table G-2**. The listed bromomethane (or methyl bromide) and acetone non-detected results were rejected because the relative response factors (RRFs) were below 0.05 for the associated continuing calibration verifications (CCVs). Chromium and lead results for the field duplicate pair 11EXFLC1001 and 11EXFLC1002 were rejected as the relative percent difference (%RPD) between the duplicate results was above 120% for chromium and lead.

All the other results are considered usable based on the data validation.

2. ACCURACY

Accuracy was evaluated by reviewing the percent recovery (%R) of the MS/MSD, LCS, surrogate spikes, and internal standards. In addition, blank sample (method blank, trip blank, and equipment rinsate blank) results were reviewed to evaluate any potential contamination.

2.1 MS/MSD Results

MS/MSD sample analyses were conducted for seven project samples (11EXFLE1001, 11EXFLC201, 11EXFLC401, 11EXFLG1101, 11EXFLC1001, 11EXPRG201, and 11EXPRJ1201) for VOC, cPAH, and metal analyses. In addition, MS/MSD analyses were conducted for 11EXFLG701 and 11EXFLD102 for cPAH analysis. MS/MSD analyses were conducted for 11EXFLA501 and 11EXFLF801 for metal analysis and 11EXPRB201 and 11EXFLE301 for mercury analysis. The frequency of MS/MSD sample analyses conducted is consistent with the generic requirement for Seneca project presented in the Generic Site-Wide Sampling and Analysis Plan (Parsons, 2006). For VOC analysis, the samples were spiked with five analytes (1,1-dichloroethene, trichloroethene, benzene, toluene, and chlorobenzene). For cPAH and metal analyses, the samples were spiked with

all target compound analytes. Metal spike analysis was performed for each SDG except SDGs A06-E032, A06-E553, and A06-F365. For SDGs A06-D710 and A06-E028, spike analysis was conducted only for mercury analysis. All those metal results in the SDGs without spike analysis conducted were qualified according to the Region 2 SOP (i.e., all detects were qualified J).

All MS/MSD recoveries were within the laboratory established QC limits or/and the project limits of 75%-125% for all samples except those summarized in Table G-3.

In general, MS/MSD results for VOC, cPAH, and metal analyses indicated minimal matrix impact. No action was taken based solely on the MS/MSD results for VOC and cPAH analyses. Qualifiers were added to the affected metal results based on the spike results in accordance with the USEPA Region 2 SOPs and the details are presented in Table G-3.

2.2 LCS Results

LCS results for VOC and cPAH analyses were all within the laboratory established limits and the project advisory limits of 70~130%. LCS results for metal analysis were all within the project limits of 80%~120% with the exception of the LCS results for antimony in 12 SDGs were above 120%, as summarized in **Table G-4**. All the associated antimony detects were qualified J based on the LCS results.

2.3 Surrogate Recovery Results

Surrogate spike analyses were conducted for VOC and cPAH samples. **Table G-5** presents a summary of surrogate recovery noncompliance. All the other surrogate spike recoveries were within the laboratory established limits and the project limits of 70~130% for VOC analysis and within the laboratory established limits for cPAH analysis.

2.4 Internal Standard Results

Internal standards were added to VOC and cPAH samples to determine instrument stability. All the internal standard recoveries were within the project QC limits (i.e., the internal standard area responses were within -50% ~ +100% of the internal standard area associated with CCV and all retention times were within 30 seconds of the standard associated with CCV.)

2.5 Blank Sample Results

Method blank analysis was conducted for each SDG per analytical method. No sampling equipment/instrument was reused in collecting VOC, cPAH, or metal samples during the confirmatory sample collection; therefore, no equipment rinsate blank was collected for the project.

Table G-6 presents a summary of blank noncompliance results. In summary, no cPAH contamination was detected in any cPAH method blanks. For VOC analysis, methylene chloride,

toluene, and tetrachloroethene were detected in the method blanks in SDGs A06-D138, A06-E553, and A06-E646, respectively. The affected sample results were qualified in accordance with the USEPA Region 2 SOPs.

Various metals were detected in the initial calibration blanks (ICBs), continuing calibration blanks (CCBs), and preparation blanks in most SDGs, as shown in **Table G-6**. Most of the detected concentrations were all below the respective reporting limits. The sample results associated with the noncompliance blank results were qualified in accordance with the USEPA Region 2 SOPs.

3. PRECISION

Precision is determined by evaluating the RPD of the parent/field duplicate (FD) and MS/MSD (VOC and cPAH analyses) or parent/laboratory duplicate (metal analysis). The generic precision limits for the Seneca project are presented in the Generic Site-Wide Sampling and Analysis Plan for the Seneca Army Depot Activity (Parsons, 2006). Professional judgment will be used based on the USEPA Region SOP for metal data validation (i.e., HW-2) when sample results are close to reporting limits. As an example, for sample results within five times of reporting limits, the difference was compared with two times of the reporting limits.

As shown in **Table G-7**, a total of seven field duplicate pairs were available for the confirmatory soil samples collected from SEAD-11 for VOC, cPAH, and metal analyses (i.e., 11EXFLE1001/11EXFLE1002, 11EXFLC201/11EXFLC202, 11EXFLC401/11EXFLC402, 11EXFLG1101/11EXFLG1102, 11EXFLC1001/11EXFLC1002, 11EXPRG201/11EXPRG202, and 11EXPRJ1201/11EXPRJ1202). The field duplicate collection frequency is compliant with the requirement specified in the Generic Site-Wide SAP. All field duplicate results comply with the project limits presented in the Generic Site-Wide SAP or the criteria discussed above with several exceptions as presented in **Table G-8**.

Laboratory duplicate analysis was conducted for metal analysis for all SDGs but A06-E032, A06-E553, and A06-F365. For SDGs A06-D710 and A06-E028, laboratory duplicate analysis was only conducted for mercury but not all the other metals. All metal results in those SDGs without laboratory duplicate analysis performed were qualified (i.e., nondetects were qualified UJ and detects were qualified J). All laboratory duplicate results comply with the project limits presented in the Generic Site-Wide SAP or the criteria discussed above with several exceptions as presented in **Table G-8**.

All RPD results for MS/MSD samples were within the laboratory established limits and the project limit of 25%.

4. REPRESENTATIVENESS AND OTHER TECHNICAL ISSUES

Representativeness expresses the degree to which sample data accurately and precisely represents actual site conditions. Representativeness has been evaluated by:

- Sample Package Completeness and Deliverables
- Sample Preservation and Technical Holding Time
- Laboratory Transcription Error
- Other Quality Assurance/Quality Control (QA/QC) Results

4.1 Sample Package Completeness and Deliverables

The data packages submitted by STL Buffalo are sufficient for the data validation conducted for this project.

4.2 Sample Preservation and Technical Holding Time

All samples were preserved according to the preservation requirement presented in the Generic Site-Wide SAP and analyzed within the holding time. The ten soil samples in SDG A06-D871 were received by the laboratory after 48 hours from collection. Therefore, the VOC samples were resampled and grouped in SDG A06-E028 for VOC analysis.

All coolers were received with temperature below 6°C, within the limits specified by the USEPA Region II SOP HW-24 (i.e., 10°C) and the USEPA (1999) Contract Laboratory Program National Functional Guidelines for Organic Data Review (i.e., 4±2 °C).

4.3 Laboratory Transcription Error

The raw data were spot-checked in accordance with the Region 2 SOP and no transcription error was observed.

4.4 Other QA/QC Results

4.4.1 Instrument Performance

GC/MS instrument performance check was performed for VOC and cPAH analyses. GC/MS performance met the analytical method requirements for all SDGs. Chromatography baselines were generally stable for organic analyses.

4.4.2 TCL/TAL/TIC Results

For VOC and cPAH target compound lists (TCLs) detected in the samples, a comparison of the sample relative ion intensities with the standard relative ion intensities for the respective reference TCL was conducted. All relative retention times (RRTs) for the identified analytes were within 0.06RRT units of the standard RRT from continuing calibration verification. The relative ion intensities generally agree within 20% of the standard relative ion intensities with several exceptions. No action was taken based on the review of the mass spectrums.

The laboratory case narratives for SDGs A06-D138, A06-D461, A06-D710, A06-D871, A06-E239, A06-E646, A06-E648, A06-E745, and A07-O153 indicated that the chromatographic peaks for benzo(b)fluoranthene and benzo(k)fluoranthene could not be resolved for certain samples due to the sample matrix. The final values for the affected samples were reported as benzo(b)fluoranthene but should be considered an value for both compounds. The affected benzo(b)fluoranthene and benzo(k)fluoranthene results were qualified (nondetects were qualified UJ and detects were qualified J).

Tentatively identified compounds (TICs) were not reported for VOC or cPAH analyses for SEAD-11 confirmatory samples.

4.4.3 Reporting Limits

For VOC and cPAH analyses, the lowest calibration standard was used as the reporting limit and the reporting limits are the same as the CRQL specified by the CLP OLM04.3. For inorganic analyses, method detection limit was used as the basis for reporting limit and all reporting limits were below the CRQLs.

4.4.4 Calibration

Initial calibration and continuing calibration verification were conducted for VOC, cPAH, and metal analyses. Calibration noncompliances were observed for some SDGs and the detailed information is presented in **Table G-9**. The affected data were validated based on the EPA Region 2 SOPs.

CRQL standard check was conducted for metal analysis and the results were within the project limits of 80% - 120% with the exceptions listed in **Table G-10**.

4.4.5 ICP Serial Dilution

ICP serial dilution was not conducted for any metal samples in SDG A06-F365. In accordance with the Region 2 SOPs, all metal detects in this SDG were qualified J. ICP serial dilution was conducted for all other SDGs with metal samples. All ICP serial dilution results were within the limits specified in the USEPA Region 2 SOPs with the exceptions summarized in **Table G-11**. The results for the noncompliance metals were qualified in accordance with the Region 2 SOP HW-2.

4.4.6 ICP Linear Range

All inorganic concentrations used as sample results were within the ICP linear ranges.

4.4.7 ICP Interference Check

All ICP interference check sample results were with the QC limits (i.e., 80-120%).

DEFINITIONS OF DATA QUALIFIERS – ORGANICS

- U The analyte was analyzed for, but was not detected above the reported sample quantitation limit.
- J The analyte was positively identified; the associated numerical value is the approximate concentration of the analyte in the sample.
- N The analysis indicates the presence of an analyte for which there is presumptive evidence to make a “tentative identification.”
- NJ The analysis indicates the presence of an analyte that has been “tentatively identified” and the associated numerical value represents its approximate concentration.
- UJ The analyte was not detected above the reported sample quantitation limit. However, the reported quantitation limit is approximate and may or may not represent the actual limit of quantitation necessary to accurately and precisely measure the analyte in the sample.
- R The sample results are rejected due to serious deficiencies in the ability to analyze the sample and meet quality control criteria. The presence or absence of the analyte cannot be verified.

DEFINITIONS OF DATA QUALIFIERS – INORGANICS

- J The associated value is an estimated quantity.
- U The material was analyzed for, but was not detected above the level of the associated value. The associated value is either the sample quantitation limit or the sample detection limit.
- UJ The material was analyzed for, but was not detected. The associated value is an estimate and may be inaccurate or imprecise.
- R The data was unusable. (Note: Analyte may or may not be present.).

11EXFLD1001, 11EXFLD1101, 11EXFLD701, 11EXFLD801, 11EXFLD901, 11EXFLE1001, 11EXFLE1002, 11EXFLE1101, 11EXFLE901	A06-D373	All bromomethane and acetone results	Average RRF <0.05 for CCV
11EXFLB301V, 11EXFLC101V, 11EXFLC301V, 11EXFLC401V, 11EXFLC402V, and 11EXFLD401V	A06-E028	All bromomethane results	Average RRF <0.05 for CCV
11EXFLD301V, 11EXFLD201V, and 11EXFLE201V	A06-E032	All bromomethane results	Average RRF <0.05 for CCV
11EXPRG201, 11EXPRI401, 11EXPRI501, 11EXPRI601, 11EXPRI701, 11EXPRI801, 11EXPRJ1001, 11EXPRJ1101, and 11EXPRJ901	A06-E646	All bromomethane results	Average RRF <0.05 for CCV
11EXPRH401	A06-F365	All bromomethane results	Average RRF <0.05 for CCV
Inorganics			
11EXFLC1001 and 11EXFLC1002	A06-E394	Cr and Pb	Field duplicate pair %RPDs >120%.

**Table G-3
Summary of Spike Analysis Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Spiked Sample	Noncompliance	Sample Affected	Action
VOC				
A06-D373	11EXFLE1001	Spike recoveries for all spike analytes (1,1-DCE, TCE, benzene, toluene, and chlorobenzene) below the laboratory established QC limits and 75%.	All soil samples in the SDG	No action.
A06-E239	11EXFLG1101	Spike recoveries for all spike analytes but 1,1-DCE below the laboratory established QC limits and 75%.	All soil samples in the SDG	No action.
A06-E646	11EXPRG201	Spike recoveries for trichloroethene, benzene, toluene, and chlorobenzene below project limits.	All soil samples in the SDG	No action.
Metals				
A06-D138	11EXFLA501	Spike recoveries for Al, Sb, As, Ba, Be, Cd, Ca, Cr, Co, Cu, Pb, Mg, Ni, K, Se, Ag, Na, Tl, V, and Zn below 75% while sample concentrations below 4x spike levels.	All soil samples in the SDG	All detects were qualified J and all nondetects were qualified UJ.
A06-D373	11EXFLE1001	Spike recoveries for Cr, Pb, K, and Zn below 75% while sample concentrations below 4x spike levels.	All soil samples in the SDG	All detects were qualified J and all nondetects were qualified UJ.
A06-D461	11EXFLC201	Spike recovery for Ba above 125% but below 200% while sample concentrations below 4X spike level; spike recoveries for Sb and K below 75% while sample concentrations below 4x spike levels.	All soil samples in the SDG	All Sb and K detects were qualified J and all nondetects were qualified UJ. All Ba detects were qualified J.
A06-D871	11EXFLC401	Spike recoveries for Ba, Mg, K, and Zn below 75% while sample concentrations below 4x spike levels.	All soil samples in the SDG	All affected metal detects were qualified J and all nondetects were qualified UJ.
A06-E239	11EXFLG1101	Spike recoveries for Sb, Ba, Cr, Pb, Ni, K, and Zn below 75% while sample concentrations below 4x spike levels.	All soil samples in the SDG	All affected metal detects were qualified J and all nondetects were qualified UJ.
A06-E394	11EXFLC1001	Spike recovery for Al above 125% and recovery for Ba below 75% while sample concentrations below 4x spike levels.	All soil samples in the SDG	Al and Ba detects were qualified J and Ba non-detects were qualified UJ.
A06-E646	11EXPRG201	Spike recovery for Ca above 125% while sample concentration below 4x spike levels.	All soil samples in the SDG	All Ca detects were qualified J.
A06-E648	11EXPRJ1201	Spike recovery for Al below 75% while sample concentration below 4x spike levels.	All soil samples in the SDG	All Al detects were qualified J and all nondetects were qualified UJ.
A06-E745	11EXFLF801	Spike recoveries for Sb and K below 75% and spike recovery for Ca above 125% while sample concentration below 4x spike levels.	All soil samples in the SDG	All Sb, K, and Ca detects were qualified J and all Sb and K nondetects were qualified UJ.

Table G-4
Summary of Laboratory Control Sample Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity

SDG	Noncompliance	Sample Affected	Action
A06-D138	LCS for Sb above 120% at 182%	All soil samples in the SDG	All Sb detects were qualified J.
A06-D373	LCS for Sb above 120% at 153%	All soil samples in the SDG	Sb was not detected in any samples in this SDG; therefore no action was taken.
A06-D461	LCS for Sb above 120% at 166%	All soil samples in the SDG	Sb was not detected in any samples in this SDG; therefore no action was taken.
A06-D710	LCS for Sb above 120% at 168%	All soil samples in the SDG	All Sb detects were qualified J.
A06-D871	LCS for Sb above 120% at 191%	All soil samples in the SDG	Sb was not detected in any samples in this SDG; therefore no action was taken.
A06-E028	LCS for Sb above 120% at 170%	All soil samples in the SDG	Sb was not detected in any samples in this SDG; therefore no action was taken.
A06-E239	LCS for Sb above 120% at 184%	All soil samples in the SDG	All Sb detects were qualified J.
A06-E394	LCS for Sb above 120% at 193%	All soil samples in the SDG	Sb was not detected in any samples in this SDG; therefore no action was taken.
A06-E553	LCS for Sb above 120% at 174% and 175%.	All soil samples in the SDG	All Sb detects were qualified J.
A06-E646	LCS for Sb above 120% at 171%.	All soil samples in the SDG	All Sb detects were qualified J.
A06-E648	LCS for Sb above 120% at 171% and 146%.	All soil samples in the SDG	All Sb detects were qualified J.
A06-E745	LCS for Sb above 120% at 140%.	All soil samples in the SDG	All Sb detects were qualified J.

Table G-5
Summary of Surrogate Noncompliance Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity

SDG	Samples	Description	Qualification
VOC			
A06-D138	11EXFLC601DL	Surrogate NBZ diluted out.	No action.
A06-E239	11EXFLG1101MS/MSD	Surrogates 1,2-dichloroethane-D4 and p-bromofluorobenzene recoveries below 70%.	No action.
A06-E394	11EXFLC1001MS/MSD and LCS	1,2-dichloroethane-D4 recoveries below 70%.	No action as all MS/MSD and LCS results within limits.
A06-E553	11EXFLG501, 11EXFLG601, 11EXFLG701, LCS, and method blank	1,2-dichloroethane-D4 recoveries below 70%.	All VOC results for affected samples were qualified (detects were qualified J and non-detects were qualified UJ)
A06-E646	LCS sample	1,2-dichloroethane-D4 recoveries below 70%.	No action as all LCS results within limits.
A06-E648	11EXPRJ1201MS/MSD	1,2-dichloroethane-D4 recoveries below 70%.	No action as all MS/MSD results within limits.

**Table G-6
Summary of Blank Noncompliance Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Analytes Detected	Blank	Sample Affected	Blank Concentration	Action
A06-D138	Methylene Chloride	Soil Method Blank	All samples in this SDG.	7 ug/kg (>RL of 5 ug/kg)	All sample results < 70 ug/kg were qualified as nondetect ¹
	Cu	ICB	All samples in this SDG.	<RL	All copper raw results between MDL and RL were changed to solids RL with U
	Be	CCB 11/9/06 1:54 and 2:55	11EXFLA501	<RL	No action as sample result>RL
	Be, Cd, Cr, Co, Fe, Ag, Na, V	CCBs 11/9/06 2:55 and 3:55	11EXFLA601, 11EXFLA701, 11EXFLB501, 11EXFLB601, 11EXFLB701, 11EXFLB801, 11EXFLC801, and 11EXFLC901	<RL	All raw results for the referenced metals between MDL and RL were changed to solids RL with U
	Be and Mg	CCB 11/9/06 13:05	11EXFLC601 and 11EXFLC701	<RL	No action as all sample results>RL
	Al, Cr, Mn, and Zn	Preparation Blank	All samples in this SDG.	<RL	No action as sample result>RL
A06-D373	Be, Mg, Se, and Tl	ICB	All samples in this SDG.	<RL	All associated metal results between MDL and RL were changed to solids RL with U
	Ba, Be, Mg, Se, and Tl	CCBs	All samples in this SDG.	<RL	All associated metals results>RLs; therefore no action was taken
	Mn and Zn	Preparation Blank	All samples in this SDG.	<RL	No action as sample result>RL
A06-D461	Sb, Cd, and Cu	ICB	All samples in this SDG.	<RL	No results were between MDLs and RLs for affected metals; therefore, no action was taken.
	Sb, Ba, Be, Ca, Fe, Mg, and Mn	CCBs	All samples in this SDG.	<RL	As all associated results were above RLs, no action was taken.
	Zn	Preparation Blank	All samples in this SDG.	<RL	No action as all Zn results>RLs
A06-D710	Al, Ba, Ca, Fe, Mg, and Mn	ICB/CCBs	All samples in this SDG.	<RL	No results were between MDLs and RLs for affected metals; therefore, no action was taken.
	Mg, Mn, and Zn	Preparation Blank	All samples in this SDG.	<RL	No action as all affected metal results>RLs

**Table G-6
Summary of Blank Noncompliance Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Analytes Detected	Blank	Sample Affected	Blank Concentration	Action
A06-D871	Fe	ICB	All samples in this SDG.	<RL	No results were between MDLs and RLs for affected metals; therefore, no action was taken.
	Al, Ba, Be, Ca, Fe, Mg, Mn, and K	CCBs	All samples in this SDG.		No results were between MDLs and RLs for affected metals; therefore, no action was taken.
	Al, Mn, and Zn	Preparation Blank	All samples in this SDG.	<RL	No action as all affected metal results>RLs
A06-E028	Be and Mg	ICB	All samples in this SDG.	<RL	No results were between MDLs and RLs for affected metals; therefore, no action was taken.
	Sb, Be, Cu, Mg, Mn, and Se	CCBs	All samples in this SDG.		No results were between MDLs and RLs for affected metals except Sb in 11EXFLE501. Sb result in 11EXFLE501 was changed to RL with U. No action for the other affected results.
	Mn and Ni	Preparation Blank	All samples in this SDG.	<RL	No action as all affected metal results>RLs
A06-E239	Ba, Be, Mg, and Mn	ICB	All samples in this SDG.	<RL	All associated metal results between MDL and RL were changed to soilds RL with U
	Al, Ba, Be, Fe, Mg, and Mn	CCBs	11EXFLE101, 11EXFLF301, 11EXFLF401, 11EXFLF501, and 11EXFLF601	<RL	All associated metal results between MDL and RL were changed to soilds RL with U
	Al, Ba, Be, Ca, Fe, Mg, Mn, and Ag	CCBs	11EXFLD601, 11EXFLF701, 11EXFLF901, 11EXFLG801, 11EXFLG901, 11EXFLH901, 11EXFLH1001, 11EXFLG1001, 11EXFLH1101, and 11EXFLG1101	<RL	All associated metal results between MDL and RL were changed to soilds RL with U
	Al, Be, Ca, Fe, Mg, Mn, and Ag	CCBs	11EXFLG1102	<RL	All associated metal results between MDL and RL were changed to soilds RL with U
	Al, Cr, Fe, Mg, Mn, Ni, and Zn	Preparation Blank	All samples in this SDG.	<RL	All associated metal results between MDL and RL were changed to soilds RL with U

**Table G-6
Summary of Blank Noncompliance Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Analytes Detected	Blank	Sample Affected	Blank Concentration	Action
A06-E394	Al, Be, Cd, Ca, Mg, Mn, and K	ICB	All samples in this SDG.	<RL	All associated metal results between MDL and RL were changed to solids RL with U
	Al, As, Ba, Be, Cd, Ca, Co, Fe, Mg, Mn, Ag, and VAl, Ba, Be, Ca, Fe, Mg, Mn, and Ag	CCBs	11EXFLH801, 11EXFLI801, 11EXFLI901, and 11EXFLI1001	<RL	All associated metal results between MDL and RL were changed to solids RL with U
	Al, As, Ba, Be, Ca, Cd, Co, Fe, Mg, Mn, Ag, and V	CCBs	11EXFLI1101, 11EXFLC1001, 11EXFLC1002, 11EXFLF201, and 11EXFLG201	<RL	All associated metal results between MDL and RL were changed to solids RL with U
	Ba, Be, Cd, Ca, Cr, Mg, Ni, K, Ag, V, and Zn	Preparation Blank	All samples in this SDG.	Al, Fe, Mn>RL, others<RL	All associated metal results between MDL and RL were changed to solids RL with U
A06-E553	toluene	Soil Method Blank	All samples in this SDG.	2 ug/kg (<RL of 5 ug/kg)	No action as toluene was not detected in any samples.
	Be and Ag	ICB	All samples in this SDG.	<RL	All Ag raw results between MDL and RL were changed to solids RL with U; all Be results were above RLs therefore no action.
	Al, Ba, Be, Ca, Cr, Fe, Mg, Mn, K, and Ag	CCBs 11/9/06 2:55 and 3:55	All samples in this SDG.	Ag slightly >RL for two CCBs, others<RL	All Ag raw results between MDL and RL were changed to solids RL with U; all other metal results were above RLs therefore no action.
	Al, Be, Cr, Cu, Fe, Mg, Mn, Ag, and Zn	Preparation Blank	All samples in this SDG.	<RL	Only Ag results were between MDLs and RLs; all Ag results were changed to solids RLs with U

**Table G-6
Summary of Blank Noncompliance Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Analytes Detected	Blank	Sample Affected	Blank Concentration	Action
A06-E646	tetrachloroethene	Soil Method Blank VBLK13	11EXPRB101, 11EXPRC101, 11EXPRE201, 11EXPRF201, 11EXPRG202, and 11EXPRH301	3 ug/kg (<RL of 5 ug/kg)	No action as tetrachloroethene was not detected in any affected samples.
	Al, Be, Fe, K, and V	ICB 12/8/06 10:22	11EXPRB101 and 11EXPRC101	<RL	All raw results for the affected samples and metals between MDL and RL were changed to soilds RL with U.
	Ba, Co, Fe, Mn, V, and Zn	ICB 12/8/06 19:11	11EXPRE201, 11EXPRF201, 11EXPRG201, 11EXPRG202, 11EXPRH301, 11EXPRI401, 11EXPRI501, 11EXPRI601, 11EXPRI701, 11EXPRI801, 11EXPRJ1001, 11EXPRJ1101, and 11EXPRJ901	<RL	All raw results for the affected samples and metals between MDL and RL were changed to soilds RL with U.
	Al, Be, Cr, Fe, and Mn	CCBs 12/8/06 17:22 and 18:29	11EXPRB101 and 11EXPRC101	<RL	All Ag raw results between MDL and RL were changed to soilds RL with U; all other metal results were above RLs therefore no action.
	Al, Ba, Be, Ca, Fe, Mg, Mn, Ag, V, and Zn	CCBs 12/08/06 19:38, 20:41, and 21:45	11EXPRE201, 11EXPRF201, 11EXPRG201, 11EXPRG202, 11EXPRH301, 11EXPRI401, 11EXPRI501, 11EXPRI601, 11EXPRI701, 11EXPRI801, 11EXPRJ1001, 11EXPRJ1101, and 11EXPRJ901	<RL	All Ag raw results between MDL and RL were changed to soilds RL with U; all other metal results were above RLs therefore no action.
	Al, Be, Ca, Cr, Fe, Mn, K, and Zn	Preparation Blank	All samples in this SDG.	<RL	All raw results for the affected samples and metals between MDL and RL were changed to soilds RL with U.

**Table G-6
Summary of Blank Noncompliance Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Analytes Detected	Blank	Sample Affected	Blank Concentration	Action
A06-E648	Ba, Co, Fe, Mg, and Mn	ICB	All samples in this SDG.	<RL	No results were between MDLs and RLs for affected metals; therefore, no action was taken.
	Al, Ba, Be, Ca, Fe, Mg, Mn, and Ag	CCBs 12/8/06 20:41 and 21:45	11EXPRED1101, 11EXPRD1102, 11EXPRC1101, and 11EXPRC1001	<RL	All associated metal results between MDL and RL were changed to soilds RL with U
	Al, Ba, Be, Fe, Mn, and Ag	CCB 12/8/06 23:56 and 12/9/06 01:00	11EXPRJ1201 and 11EXPRJ1202		All associated metal results between MDL and RL were changed to soilds RL with U
	Al, Ba, Be, Fe, Mg, Mn, and Ag	CCB 12/9/06 01:00 and 01:33	11EXPRI1201, 11EXPRH1201, 11EXPRG1201, and 11EXPRF1101		All associated metal results between MDL and RL were changed to soilds RL with U
	Al, Be, Cr, Mn, Ag, and Zn	Preparation Blank	11EXPRED1101, 11EXPRD1102, 11EXPRC1101, and 11EXPRC1001	<RL	All associated metal results between MDL and RL were changed to soilds RL with U
	Al, Mn, and Zn	Preparation Blank	11EXPRJ1201, 11EXPRJ1202, 11EXPRI1201, 11EXPRH1201, 11EXPRG1201, and 11EXPRF1101	<RL	All associated metal results between MDL and RL were changed to soilds RL with U
A06-E745	Al, Ba, Be, Mg, and Mn	ICB	All samples in this SDG.	<RL	No results were between MDLs and RLs for affected metals; therefore, no action was taken.
	Al, Ba, Be, Ca, Fe, Mg, and Mn	CCBs 12/12/06 12:01 and 13:10	All samples in this SDG.	<RL	All associated results above RLs; therefore, no action was taken.
	Al, Mg, Mn, and Zn	Preparation Blank	All samples in this SDG.	<RL	All associated results above RLs; therefore, no action was taken.
A06-F365	Al, Ba, Be, Ca, and Zn	ICB	All samples in this SDG.	<RL	No results were between MDLs and RLs for affected metals; therefore, no action was taken.
	Al, Ba, Be, and Zn	CCBs 12/28/06 01:24 and 01:45	All samples in this SDG.	<RL	All associated results above RLs; therefore, no action was taken.
	Al, Ba, Be, Ca, Fe, Mg, K, Na, and Zn	Preparation Blank	All samples in this SDG.	<RL	All associated metal results between MDL and RL were changed to soilds RL with U

Notes:

1. Qualifier U was added to all sample results above RLs; for sample results below RLs, the results were raised to the RLs with a qualifier U.
2. For inorganics, only concentrations detected above their RLs were considered as noncompliance.

Table G-7
List of Parent/Field Duplicate Samples
Construction Completion Report for SEAD-11
Seneca Army Depot Activity

SDG	Parent Sample	Field Duplicate
A06-D373	11EXFLE1001	11EXFLE1002

A06-D871	11EXFLC401 ¹	11EXFLC402 ¹
A06-E028	11EXFLC401V ²	11EXFLC402V ²
A06-E239	11EXFLG1101	11EXFLG1102
A06-E394	11EXFLC1001	11EXFLC1002
A06-E646	11EXPRG201	11EXPRG202
A06-E648	11EXPRJ1201	11EXPRJ1202

Notes:

VOC, cPAH, and metal analyses were conducted for the listed duplicate samples except:

1. cPAH and metal analyses were conducted.
2. Only VOC analysis was conducted.

Table G-8
Summary of Noncompliance Results for Parent/Field Duplicate Samples
Construction Completion Report for SEAD-11
Seneca Army Depot Activity

Sample	SDG	Noncompliance TCLs/TALs	Action
Field Duplicate			
11EXFLE1001/11EXFLE1002	A06-D373	Cr and Pb	Associated Results qualified J for the duplicate pair
11EXFLC201/11EXFLC202	A06-D461	Pb and Mn	Associated Results qualified J for the duplicate pair
11EXFLC1001/11EXFLC1002	A06-E394	Ba, Cr, and Pb	Ba results for the duplicate pair were qualified J and Cr and Pb results for the duplicate pair were qualified R.
11EXPRG201/11EXPRG202	A06-E646	benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, indeno(1,2,3-cd)pyrene, chrysene, dibenzo(a,h)anthracene,	All results for the referenced analytes were qualified J for the duplicate samples.
11EXPRJ1201/11EXPRJ1202	A06-E648	Ca, Mg, and Pb	Associated Results qualified J for the duplicate pair
Laboratory Duplicate			
11EXFLC201	A06-D461	Mn	All Mn detects in the SDG were qualified J.
11EXFLG1101	A06-E239	Ca, Mn	All Ca and Mn detects in this SDG were qualified J.
11EXFLC1001	A06-E394	Ca	All Ca detects in this SDG were qualified J.
11EXPRG201	A06-E646	Mn	All Mn detects in this SDG were qualified J.

**Table G-9
Summary of Calibration Noncompliance Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Noncompliance	Calibration	Sample Affected	Action
VOC				
A06-D138	%RSDs of 2-butanone, trans-1,3-dichloropropene, 1,2-dibromo-3-chloropropane, and methyl acetate above 15% limit (16%, 20%, 18%, and 23%, respectively)	IC 10/16/06 12:55-15:39	All soil samples in the SDG	No action as none of the referenced analytes were detected in any samples in the SDG.
	%Ds of bromomethane, acetone, trans-1,2-dichloroethene, methyl acetate, and methyl-t-butyl ether above 20% limit but below 90%	CCV 11/08/06 09:17	All soil samples in the SDG	Non-detects were qualified UJ and detects were qualified J.
A06-D373	%RSDs of 2-butanone, trans-1,3-dichloropropene, 1,2-dibromo-3-chloropropane, and methyl acetate above 15% limit (16%, 20%, 18%, and 23%, respectively)	IC 10/16/06 12:55-15:39	All soil samples in the SDG	No action as none of the referenced analytes were detected in any samples in the SDG.
	%Ds of bromomethane, acetone, trans-1,2-dichloroethene, 2-butanone, methyl acetate, and methyl-t-butyl ether above 20% limit but below 90%	CCV 11/13/06 10:11	All soil samples in the SDG	Non-detects were qualified UJ and detects were qualified J.
	Average RRF <0.05 for bromomethane and acetone			Bromomethane or acetone was not detected in any project samples and all nondetects were qualified R.
A06-D461	%RSDs of methylene chloride and 1,2-dichloroethane-D4 above 15% limit but below 90%.	IC 11/16/06: 21:30-23:21	All soil samples in the SDG	All methylene chloride detects were qualified J.
A06-D710	%RSDs of methylene chloride and 1,2-dichloroethane-D4 above 15% limit (34% and 15.4% respectively)	IC 11/16/06 21:30-23:21	All soil samples in the SDG	Methylene chloride detects were qualified J.
	%Ds of 1,1,2-trichloro-1,2,2-trifluoroethane, trichlorofluoromethane, and 1,2-dichloroethane-D4 above 20% limit but below 90%	CCV 11/21/06 12:20	All soil samples in the SDG	Non-detects were qualified UJ and detects were qualified J.
A06-E028	%RSDs of methylene chloride, 1,2-dichloroethane-D4, bromoform, p-bromofluorobenzene above 15% limit but below 90%.	ICs 11/16/06 21:30-23:21 11/21/06 10:16-12:36	All soil samples in the SDG	All methylene chloride detects were qualified J.
	%Ds of bromomethane, methylene chloride, trans-1,2-dichloroethene, methyl acetate, trichlorofluoromethane, and methyl-t-butyl ether above 20% limit but below 90%; Average RRF for bromomethane was below 0.05.	CCV 11/25/06 7:10	11EXFLB301V, 11EXFLC101V, 11EXFL301V, 11EXFLC401V, 11EXFLC402V, and 11EXFLD401V	Bromomethane results were qualified R for non-detects and J for detects. For the other affected results, non-detects were qualified UJ and detects were qualified J.
	%D of surrogate 1,2-dichloroethane-D4 above 20% limit but below 90%.	CCV 11/27/06 09:58	11EXFLD501V, 11EXFLE301, 11EXFLE401, 11EXFLE501, 11EXFLE601, 11EXFLE701, and 11EXFLE801	As all surrogate recoveries were within the limits, no action was taken.
A06-E032	%RSDs of methylene chloride, bromoform, p-bromofluorobenzene, and 1,2-dichloroethane-D4 above 15% limit but below 90%.	IC 11/21/06 10:16-12:36	All soil samples in the SDG	All methylene chloride detects were qualified J.
	%Ds of bromomethane, methylene chloride, trans-1,2-dichloroethene, methyl acetate, trichlorofluoromethane, and methyl-t-butyl ether above 20% limit but below 90%; Average RRF for bromomethane was below 0.05.	CCV 11/25/06 7:10	All soil samples in the SDG	Bromomethane results were qualified R for non-detects and J for detects. For the other affected results, non-detects were qualified UJ and detects were qualified J.

**Table G-9
Summary of Calibration Noncompliance Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Noncompliance	Calibration	Sample Affected	Action
A06-E239	%RSDs of methylene chloride, bromoform, and surrogates p-bromofluorobenzene and 1,2-dichloroethane-D4 above 15% limit but below 90%.	ICs 11/16/06 21:30-23:21 11/21/06 10:16-12:36	All soil samples in the SDG	All methylene chloride detects were qualified J.
	%Ds of chloroethane, methylene chloride, trans-1,2-dichloroethene, carbon tetrachloride, methyl-t-butyl ether, and surrogates toluene-D8, p-bromofluorobenzene, and 1,2-dichloroethane-D4 above 20% limit but below 90%.	CCV 11/30/06 09:33	11EXFLG1101	Non-detects were qualified UJ and detects were qualified J for the affected analytes.
	%Ds of bromomethane and 1,2-dichloroethane-D4 above 20% limit but below 90%.	CCV 11/29/06 15:54	all soil samples in the SDG but 11EXFLG1101	Non-detects were qualified UJ and detects were qualified J for the affected analytes.
A06-E394	%RSDs of methylene chloride and surrogate 1,2-dichloroethane-D4 above 15% limit but below 90%.	IC 11/16/06 21:30-23:21	All soil samples in the SDG	All methylene chloride detects were qualified J.
	%Ds of bromomethane, methylene chloride, trichlorofluoromethane, and surrogate 1,2-dichloroethane-D4 above 20% limit but below 90%.	CCV 12/02/06 07:08	All soil samples in the SDG	Non-detects were qualified UJ and detects were qualified J for the affected analytes.
A06-E553	%RSDs of methylene chloride and surrogate 1,2-dichloroethane-D4 above 15% limit but below 90%.	IC 11/16/06 21:30-23:21	All soil samples in the SDG	All methylene chloride detects were qualified J.
	%Ds of bromomethane and surrogate 1,2-dichloroethane-D4 above 20% limit but below 90%.	CCV 12/06/06 16:35	All soil samples in the SDG	Non-detects were qualified UJ and detects were qualified J for the affected analytes.
A06-E646	%RSDs of methylene chloride, bromoform, and surrogates p-bromofluorobenzene and 1,2-dichloroethane-D4 above 15% limit but below 90%.	ICs 11/16/06 21:30-23:21 11/21/06 10:16-12:36	All soil samples in the SDG	All methylene chloride detects were qualified J. Bromoform was not detected in any samples; therefore no action
	%Ds of bromomethane, methylene chloride, acetone, trans-1,2-dichloroethene, carbon tetrachloride, methyl acetate, methyl-t-butyl ether above 20% limit but below 90%. RRF for bromomethane <0.05	CCV 12/08/06 09:10	11EXPRG201, 11EXPRI401, 11EXPRI501, 11EXPRI601, 11EXPRI701, 11EXPRI801, 11EXPRJ1001, 11EXPRJ1101, and 11EXPRJ901	Bromomethane non-detects were qualified R and detects were qualified J. Other non-detects were qualified UJ and detects were qualified J for the affected analytes.
	%Ds of bromomethane, trichlorofluoromethane, and surrogate 1,2-dichloroethane-D4 above 20% limit but below 90%.	CCV 12/07/06 16:10	11EXPRB101, 11EXPRC101, 11EXPRE201, 11EXPRF201, 11EXPRG202, and 11EXPRH301	Non-detects were qualified UJ and detects were qualified J for the affected analytes.
A06-E648	%RSDs of methylene chloride and surrogate 1,2-dichloroethane-D4 above 15% limit but below 90%.	IC 11/16/06 21:30-23:21	All soil samples in the SDG	All methylene chloride detects were qualified J.
	%Ds of bromomethane, trichlorofluoromethane, and surrogate 1,2-dichloroethane-D4 above 20% limit but below 90%.	CCV 12/07/06 16:10	All soil samples in the SDG	Non-detects were qualified UJ and detects were qualified J for the affected analytes.
A06-E745	%RSDs of methylene chloride, bromoform, and surrogates p-bromofluorobenzene and 1,2-dichloroethane-D4 above 15% limit but below 90%.	IC 11/21/06 10:16-12:36	All soil samples in the SDG	All methylene chloride detects were qualified J. No action for bromoform as it was not detected in any samples in the SDG.
	%Ds of bromomethane, methylene chloride, trans-1,2-dichloroethene, carbon tetrachloride, 1,2,3-trichlorobenzene, 1,2,4-trichlorobenzene, and methyl-t-butyl-ether	CCV 12/09/06 09:11	All soil samples in the SDG	Non-detects were qualified UJ and detects were qualified J for the affected analytes.
A06-F365	%RSDs of methylene chloride, bromoform, and surrogates p-bromofluorobenzene and 1,2-dichloroethane-D4 above 15% limit but below 90%.	IC 11/21/06 10:16-12:36	All soil samples in the SDG	All methylene chloride detects were qualified J. No action for bromoform as it was not detected in any samples in the SDG.

**Table G-9
Summary of Calibration Noncompliance Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Noncompliance	Calibration	Sample Affected	Action
	%Ds of bromomethane, chloroethane, methylene chloride, and carbon tetrachloride above 20% limit but below 90%. RRF<0.05 for bromomethane	CCV 12/22/06 12:24	All soil samples in the SDG	Bromomethane non-detect was qualified R. Non-detects were qualified UJ and detects were qualified J for the other affected analytes.
SVOC				
A06-D138	%Ds for indeno(1,2,3-cd)pyrene and dibenzo(a,h)anthracene above 20% but below 90%	CCV 11/10/06 at 08:32	All soil samples in the SDG	Non-detects were qualified UJ and detects were qualified J.
A06-D710	%D for surrogate nitrobenzene-D5 above 20% but below 90%	CCV 11/20/06 at 13:43	All soil samples in the SDG	As surrogate recoveries were within limits, no action was taken
	%D for surrogate nitrobenzene-D5 above 20% but below 90%	CCV 11/21/06 at 07:42	All soil samples in the SDG	As surrogate recoveries were within limits, no action was taken
A06-D871	%D of surrogate nitrobenzene-D5 above 20% limit but below 90%.	CCV 11/27/06 10:52	All soil samples in the SDG	As all surrogate recoveries were within the limits, no action was taken.
A06-E028	%D for surrogate nitrobenzene-D5 above 20% but below 90%	CCV 11/27/06 at 10:52	All soil samples in the SDG	As surrogate recoveries were within limits, no action was taken
A06-E032	%D for surrogate nitrobenzene-D5 above 20% but below 90%	CCVs 11/27/06 at 10:52 11/28/06 at 07:30	All soil samples in the SDG	As surrogate recoveries were within limits, no action was taken
A06-E239	%D for surrogate nitrobenzene-D5 above 20% but below 90%	CCV 12/01/06 at 10:02	All soil samples in the SDG	As surrogate recoveries were within limits, no action was taken

CCV = Continuing Calibration Verification
%D = Percent Deviation

IC = Initial Calibration
%RSD = Percent Relative Standard Deviation

Table G-10
Summary of CRQL Standard Check Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity

SDG	Noncompliance	Sample Affected	Action
A06-D138	As and Ag CRQL standard recoveries above limit of 120%.	All samples in this SDG	As result for 11EXFLB801 and Ag result for 11EXFLB701 and 11EXFLC801 were qualified J.
A05-D373	Se CRQL standard recoveries above limits of 80-120% (141%)	All samples in this SDG	As all Se results were nondetects, no action was taken.
A06-D871	Ag CRQL standard recovery above limits of 80-120% (133%)	All samples in this SDG	As all Ag results were nondetects, no action was taken.
A06-E028	Sb, Be, and Cd CRQL standard recoveries above limits of 80-120%.	All samples in this SDG	All Sb, Be, and Cd detects <2CRQLs were qualified J.
A06-E553	Hg CRQL standard recovery below limits of 80-120%.	All samples in this SDG	All Hg nondetects were qualified UJ and all Hg detects <2CRQLs were qualified J.
A06-E648	Se and Hg CRQL standard recoveries below limits of 80-120%.	All samples in this SDG	All Hg and Se nondetects were qualified UJ and all Hg and Se detects <2CRQLs were qualified J.
A06-E745	Se and Hg CRQL standard recoveries below limits of 80-120%.	All samples in this SDG	All Hg and Se nondetects were qualified UJ and all Hg and Se detects <2CRQLs were qualified J.

**Table G-11
Summary of ICP Serial Dilution Results
Construction Completion Report for SEAD-11
Seneca Army Depot Activity**

SDG	Noncompliance	Sample Affected	Action
A06-D138	%Ds for Al, Ba, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Ni, K, V, and Zn above 10% with original concentrations > 50xMDLs	All soil samples in the SDG	All detects were qualified J for the affected metals.
A06-D373	%Ds for Ni and Zn above 10% with original concentrations > 50xMDLs	All soil samples in the SDG	All Ni and Zn detects were qualified J.
A06-D461	%Ds for Co, Ni, K, and Zn above 10% with original concentrations > 50xMDLs	All soil samples in the SDG	All Co, Ni, K, and Zn detects were qualified J.
A06-D871	%D for Ni above 10% with original concentrations > 50xMDLs	All soil samples in the SDG	All Ni detects were qualified J.
A06-E028	%Ds for Al, Ba, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Ni, K, V, and Zn above 10% with original concentrations > 50xMDLs	All soil samples in the SDG	All detects were qualified J for the affected metals.
A06-E032	%D for Pb above 10% with original concentrations > 50xMDL	All soil samples in the SDG	All detects were qualified J for the affected metals.
A06-E239	%Ds for Al, Ba, Ca, Cr, Co, Fe, Pb, Mg, Mn, Ni, K, V, and Zn above 10% with original concentrations > 50xMDL	All soil samples in the SDG	All detects were qualified J for the affected metals.
A06-E394	%Ds for Cr, V, and Zn above 10% with original concentrations > 50xMDL	All soil samples in the SDG	All detects were qualified J for the affected metals.
A06-E553	%Ds for Al, Ba, Ca, Cr, Co, Cu, Fe, Pb, Mg, Mn, Ni, K, V, and Zn above 10% with original concentrations > 50xMDL	All soil samples in the SDG	All detects were qualified J for the affected metals.
A06-E646	%Ds for Cr, Co, Fe, Pb, V, and Zn above 10% with original concentrations > 50xMDL	All soil samples in the SDG	All detects were qualified J for the affected metals.
A06-E648	%Ds for Ca, Co, Fe, Ni, V, and Zn above 10% with original concentrations > 50xMDL	All soil samples in the SDG	All detects were qualified J for the affected metals.
A06-E745	%Ds for Al, Ba, Ca, Cr, Co, Fe, Pb, Mg, Mn, Ni, K, V, and Zn above 10% with original concentrations > 50xMDL	All soil samples in the SDG	All detects were qualified J for the affected metals.

- **NYSDEC Response to Comments 12/6/2007**

Army's Response to Comments from the United States Environmental Protection Agency

Subject: Draft Construction Completion Report for SEAD-11
Seneca Army Depot
Romulus, New York

Comments Dated: May 25, 2007

Date of Comment Response: July 24, 2007

Army's Response to Comments

SPECIFIC COMMENTS

Comment 1: Section 2.5, Establishment of Work and Staging Areas, Page 2-2. The Report indicates in the second paragraph under this section that, "A 12-inch steel culvert pipe was added at the entrance and exit of the loading road to maintain the water flow in the swale." This feature could not be located on Drawing C-2. Revise Drawing C-2 so that this feature is clearly indicated on the drawing.

Response 1: The drawing has been revised to include the location of the culvert pipe.

Comment 2: Section 2.6, Control of Run-On and Run-Off Waters, Page 2-2. The last sentence in this section indicates that, "The silt fencing will be removed once vegetation is established." The Report indicates that no additional work is to be completed at this site. There is no method for determining when vegetation has been sufficiently established to remove the silt fencing. Revise the Report to indicate the means for ensuring that adequate vegetation is achieved at SEAD-11 prior to removal of the silt fencing.

Response 2: Section 5.2, Routine Inspections, has been added to Section 5. This section includes details of site inspections to ensure that the area has been re-vegetated and that erosion is not occurring. Inspections will be completed no less frequently than semi-annually until an acceptable grass stand has been established, upon which erosion controls such as silt fencing will be removed. The following has been added to the text:

SEAD-11 will be inspected semi-annually to ensure that erosion controls are in place and functioning, until an acceptable grass stand has been established. At this point, erosion controls such as silt fencing will be removed.

A checklist of maintenance inspection elements to be used in the field is provided in Table 5-2. Any problems identified during the routine inspections should be noted in the field notebook. These problems should be corrected or disclosed to the SEDA POC as soon as possible.

Comment 3: Section 2.10, Disposal Characterization and Approval, Page 2-3. The Report states in the second paragraph in this section that, "Nineteen test pits were excavated into the landfill, and the locations are shown on Drawing C-2." The last paragraph in the section indicates that, "Four new test pits

located immediately north, west, south, and east of TP-23 were excavated to delineate the horizontal limits of hazardous concentrations of lead in soil.” Thus, according to the text, 23 test pits were excavated. Review of Drawing C-2 shows Test Pits numbered from 1 to 37 on the drawing, except for Test Pits numbered 27 and 30, which could not be located on Drawing C-2. Revise the Report so that Section 2.10 accurately reflects the number of test pits excavated and shown on Drawing C-2. In addition, verify that Test Pit locations 27 and 30 are located on Drawing C-2, or include a footnote to Drawing C-2 indicating why these two test pit locations need not be shown on Drawing C-2.

Response 3: The Drawing has been revised to include TP11-27 and TP11-30. The drawing has also been modified to clarify that test pits 1 through 14 were excavated as part of the ESI, and the most recent 23 test pits were excavated for the purpose of disposal characterization.

The first sentence has been revised to state “Nineteen initial disposal characterization test pits were excavated into the landfill, and the locations are shown on **Drawing C-2.**”

Comment 4: Section 3.4.1, Excavation of Landfill Material, Page 3-3. The following sentence from the middle of the first paragraph on this page is incomplete. “The excavator was used to spread and mix the cement with the impacted soils before the soil, as shown in the photos in Appendix C.” Revise this sentence to include the omitted information.

Response 4: The phrase “before the soil” has been deleted from the text.

Comment 5: Section 3.4.3, Subsection Initial Results, Page 3-4. This subsection indicates that, “Six confirmatory samples from the base of the excavation failed to achieve the cleanup goals identified in the Final Work Plan for cPAHs (and one of those samples also exceeded for lead).” The confirmatory sampling locations are shown on Drawing C-3, and a summary of the detected analytes is presented in Table 3-2. A complete data summary is located in Table 3-3. It is unclear from Drawing C-3 exactly where the initial sample results were collected versus where the re-sample results were collected. There are 6 full grids shaded to indicate that they required an additional 6 inches of excavation, but there are also another 9 grids into which the shading extends. The original results showing the exceedances for the grids requiring re-excavation are presented in Table 3-3, and have been shaded as being removed from the data set, but the sampling nomenclature is not defined in the Report, thus making data correlation between the original sample and the resample difficult. Revise the Report so that the sample results associated with the additional excavation areas and second round of confirmatory data are clearly presented in Table 3-3 and Drawing C-3 so that the Report demonstrates that sufficient soils were removed. Ensure that any shaded areas have results for both the original failing data and the passing reanalysis clearly shown.

In addition, it appears that the re-analysis samples for the additional excavation areas were only analyzed for carcinogenic polycyclic aromatic hydrocarbons (cPAHs), even though at least one location had an

elevated result for lead in addition to the cPAHs. All the analyzed data (volatile organic compounds [VOC], cPAHs, and metals) have been removed from the data set, even though all the analytes were not included in the reanalysis (cPAHs only). Revise the Report to discuss that reanalysis conducted on the areas requiring additional excavation was only conducted for cPAHs, and address what impact the lack of analytical results for all constituents of concern has on the resulting conclusions.

Response 5: In the case where floor samples failed to meet the cleanup goals, the new sample was taken at the same northing and easting coordinate at a depth 6 inches deeper than the original failed sample. The sample label for the new floor sample at a location where the original sample failed was similar to the original with the last digit of the sample id increased by one digit. For example, the associated new sample 11EXFLB502 replaced the original failed sample 11EXFLB501. Table A provided below shows the original failed sample id and the new sample id for the final confirmation sample. Table B provides additional details on each failed sample, the soil excavated associated with that sample, and new sample(s) that were collected as final confirmation.

Table A

Grid Assignment	Original Failed Sample ID	Associated New Sample ID
B5	11EXFLB501	11EXFLB502

Drawing C-3 has been revised so that samples that failed are labeled and both the original (failed) and the final sample ids are presented. In addition, the drawing has been revised to show that 6 full grids and 6 partial grids were excavated further. Re-sampling only occurred in the grid areas requiring further excavation (8 locations). A new Table 3-4 has been created and is attached, providing a side-by-side comparison of the data for the failed sample and the final sample. In addition, a new row has been added to the top of Table 3-3 that indicates the grid location of the sample. Labeling mistakes were made in the field, which resulted in samples with sample ids that do not correspond to the grid in which they are located.

The final confirmatory sample (11EXFLC702) collected to replace the failed sample (11EXFLC701) for cPAHs and lead was analyzed for both cPAHs and lead, shown in Table 3-4.

Table 3-3 has been revised and divided into Table 3-3a and Table 3-3b to include all data that met the cleanup goals, even if other COCs within a specific sample failed some of the cleanup goals (e.g., the VOC and metals data for sample 11EXFLB501, which exceeded the cleanup goal for cPAHs, will be added to Table 3-3). This revision to the table creates a "final" data set that provides analytical data for all COCs at each sample location. Table 3-3a presents the final data for VOCs and metals; and Table 3-3b presents the final data for cPAHs. Table 3-2 has been revised to present updated UCL values for the updated "final" dataset based on the revisions discussed in this response.

Comment 6: Section 3.4.3, Subsection Final Results, Page 3-5. The third full paragraph on this page indicates that there is one exceedance of the metals clean-up goals. Iron was detected as a concentration of 51,100 mg/kg, which appears to have been collected from Grid E4. This value is greater than the maximum site background concentration for iron of 38,600 mg/kg. Further excavation of this area may be necessary. Revise the Report so that it discusses the impacts of leaving the soils associated with this result on site.

In addition, the last paragraph on this page indicates that all final confirmatory samples met the proposed cleanup goals for VOCs, cPAHs, and metals listed in the Final Work Plan. The above listed iron exceedance has not met the proposed cleanup goals. The Report also indicates that a residual risk assessment was not conducted since all the data met the proposed cleanup goals for VOCs, cPAHs, and metals. Revise the Report to discuss the residual risk associated with leaving the soils with elevated levels of iron on site.

Response 6: The discussion in Section 3.4.3 indicates that even with the presence of iron in one sample at a concentration of 51,100 mg/Kg, the 95th UCL for iron (23,267 mg/Kg) is below the PRG (23,500 mg/Kg) and the SEDA site-specific maximum background level (38,600 mg/Kg), as shown on Figure 3-2A. The text has been revised to indicate that the data set for the site meets the cleanup goals (by comparing the 95th UCL of the mean to the cleanup goals).

The Army believes that a risk assessment at the site is not necessary. Based on experience of conducting numerous human health risk assessments at sites around the Depot, the Army is aware that the SEDA site-specific background concentration for iron contributes to unacceptable levels of non-cancer risk to potential receptors. The 95th UCL of the mean (derived using USEPA's recommended ProUCL program) for iron at SEAD-11 is less than the background concentration. Therefore, risk values based on iron derived from a risk assessment would not provide a meaningful assessment of potential risk to future receptors. In light of EPA's concerns regarding this issue, the Army will submit a technical memorandum presenting a risk evaluation supporting this conclusion under separate cover.

Comment 7: Section 5.1, Groundwater Monitoring, Page 5-1. The second full paragraph on this page indicates that Monitoring Well MW 11-3 was slightly damaged during construction. The Report indicates that the damage Monitoring Well MW 11-3 sustained was significant enough that a bladder pump could not be lowered into the well and a peristaltic pump and tubing had to be used instead. The Report does not discuss comparison of field data collected from Monitoring Well MW 11-3 during this past sampling event to previous sampling events to ensure that the analytical results collected from Monitoring Well MW 11-3 are still representative of current conditions. Revise the Report to address the integrity of Monitoring Well 11-3 via comparison of previous field parameters to current field parameters in order to document that the integrity of Monitoring Well MW 11-3 has not been compromised.

Response 7: In comparing current field parameters to historic field parameters, they are generally consistent when considering seasonal variations that occur. One main purpose in collecting field parameters during groundwater sampling is to determine that a representative sample from the aquifer, and not standing water within the well, is being collected. According to the Final Contract-Specific Sampling and Analysis Plan for Seneca Army Depot Activity (Parsons, 2006), a well is considered stabilized and ready for sample collection when three successive readings remain with the following criteria:

- ± 0.1 for pH;
- $\pm 3\%$ for conductivity;
- ± 10 mV for ORP;
- $\pm 10\%$ for DO; and
- $\pm 10\%$ NTUs for turbidity with the turbidity below 10 NTUs.

Each of these criteria was met prior to sampling MW11-3. In addition, approximately 2 gallons of water was extracted from the well prior to sampling, representing one to two well volumes.

Visual inspection of the well indicates that although the riser is damaged, the damage does not extend down to the subsurface. Although there is minor damage on the riser, it has no impact on the quality of samples that can be collected from this well.

The Army is confident that the groundwater sample collected from MW11-3 was representative of the aquifer in the vicinity of the well.

Comment 8: Section 5.1, Groundwater Monitoring, Page 5-1. The third full paragraph on this page indicates that a summary of the groundwater data is presented in Table 5-1. Each analyte that exceeds its proposed action level is shaded in Table 5-1. The three analytes that exceed the proposed action levels are aluminum, iron, and manganese. The text of Section 5.1 goes on to compare these three analytes to average and maximum site-related background groundwater concentrations. These background values are not listed in Table 5-1 for comparison. The Report does not indicate that the site-related background groundwater concentrations are not EPA approved, and it is unclear why both the average and maximum values are being used for comparison. Typically, one set of site-related background groundwater concentrations are developed for comparison of data, with the resulting values based on either the average or a confidence interval of the background data set, not the maximum.

In addition, according to the Report, only one round of groundwater data has been collected from this site in the recent past. Given the number of analytical detections (tetrachloroethene and trichloroethene were detected at approximately half the Maximum Contaminant Level [MCL]), and the lack of a recent data set that takes into account seasonal variations, further sampling appears warranted at this time. Typically, one year worth of quarterly sampling is used as a baseline data set to make final risk based decisions affecting groundwater. Revise the Report to allow for collection of quarterly sampling data for one full year which can then be used to make a no further action determination. The Report should also describe the criteria that will be used for making no further action decisions (e.g. NYSDEC Ambient Water Quality Criteria [AWQS] Class GA, Secondary Drinking Water Regulations, MCLs, background levels, etc.).

Furthermore, revise the Report to indicate that EPA has not approved the approach of comparison of the background groundwater data set for making a no further action determination at this site.

Response 8: The approach of using site-specific background data as benchmark values is consistent with the approach the Army has used at many other SEDA sites. The background dataset is comprised of data from wells located across the Depot and the maximum values detected provide a range of groundwater concentrations in upgradient wells. Therefore, it is reasonable to assess how the data from the wells at SEAD-11 compare to the range of data from the SEDA site-wide background dataset as a manner of determining if the groundwater at SEAD-11 has been impacted from site activities.

The Army will use the maximum SEDA site-specific background values from the background dataset as the criteria to make a no further action determination. As always, data and documents are subject to USEPA and NYSDEC review.

The groundwater data demonstrates that groundwater at the site is within the range of background concentrations at the Depot and has not been impacted by site activities. Four rounds of sampling have been conducted at this site over the last 13 years: January 1994 (4 wells), November 2000 (7 wells), February, 2001 (7 wells) and February 2007 (7 wells). No NYSDEC GA Standards for VOCs, SVOCs, explosives, PCBs, herbicides or pesticides have been exceeded during any sampling event. The metals concentrations in groundwater have been consistent with the background data set. TCE and PCE have been detected at concentrations lower than the MCLs. Since only very low concentrations of TCE and PCE were detected in the confirmatory soil samples and the groundwater shows no exceedances currently, there is no source for groundwater levels to increase above MCLs. Therefore, it is the Army's position that no further groundwater sampling is warranted at this site.

Comment 9: Appendix A, Daily Reports. Appendix A includes all of the Daily Field Reports. In many instances, at the completion of excavation activities for the day, GPS surveys documenting the excavation quantity were not conducted. The criterion for completion of the GPS data collection is not discussed in the Report. It is also not clear how the lack of daily GPS data impacted the volume estimates. Revise the Report to clarify why GPS data was not collected daily on excavation days, and how the lack of daily GPS excavation data impacts the excavated volume estimates.

Furthermore, the Daily Field Report for December 15, 2006 indicates that several grids were relocated and staked. The Daily Field Report goes on to state that, "Two floor samples [were] taken approximately 12-inches below [the] existing surface in the middle of Grids C0 and D0." The Daily Field Report for January 3, 2007 states, "Excavated affected areas using hydraulic excavator." The Daily Field Reports do not discuss any additional sampling. This sequence of events implies that confirmation samples were collected prior to re-excavation activities. This procedure would not meet the intent of collecting confirmation samples documenting that all contaminated soils above the established remedial goal had been removed. Revise the Report to address this apparent discrepancy between the excavation and sampling collection time line.

Response 9: GPS surveys were completed as a means for the Engineer and the Army to monitor the progress. The total volume excavated was based on the completion of a final GPS survey. The frequency of collection of GPS data does not impact the final volume estimate in any way.

The word "relocated" was misused. The stakes for the grid corners had been removed by December 15, 2006. The text in the daily report was indicating that the grid corners were located again and stakes were placed at the grid corners again. The actual location of the grid corners did not change.

The intent of confirmatory sampling is to demonstrate that the soil remaining on-site at the completion of the removal action meets the cleanup goals. Prior to removing additional soil, a small area surrounding the location of the new floor confirmatory sample was excavated by hand to the depth that would be the bottom of the future excavation. A new floor sample was collected at this point. The soil in this sample was representative of soil remaining on-site.

Comment 10: Appendix D, Complete Confirmation Data and Appendix F, SDG Case Narratives.

The data tables in Appendix D include significant number of rejected data points, but the SDG case narratives do not indicate that data were rejected as a result of the laboratory data review. The Report does not include a discussion of the data usability or potential impacts of the rejected data on the data set. The Executive Summary merely indicates that the sampling frequencies met the minimum requirements. Furthermore, review of the SDG case narratives indicates that many of the cooler temperature blanks were received at temperatures above the freezing point, at least one set of VOC samples needed to be recollected due to exceedance of holding times prior to analysis, and at least one set of VOC samples only had one of the three required encore samplers filled, resulting in reduced sample volume. Revise the Report to include an assessment of the data and any impacts on its usability. This assessment should also address the impact of removing a data point with more analytical parameters than the data point it is being replaced with. For example in Table D-1, in Appendix D, Sample ID No. 11EXFLB501 dated 11/06/2006 has results for VOCs, cPAHs, and metals on pages 79 and 80 that are shaded, and Sample ID No. 11EXFLB502 dated 11/22/2006 has results for only cPAHs on page 5. The Report implies that data from Sample ID No. 11EXFLB502 will replace data from Sample ID No. 11EXFLB501, since additional excavation activities occurred at Grid B5, even though Sample ID No. 11EXFLB502 was only analyzed for cPAHs. Ensure the Report addresses how this substitution and others like it affect data completeness and usability.

Response 10: Data validation was performed for all the confirmatory soil samples collected from SEAD-11. A data usability report is presented in Appendix G of the report to summarize the data validation results and quality assurance and quality control issues.

Rejected data and the reason of rejection are summarized in Table G-2. In general, the acetone and methyl bromide (or bromomethane) non-detected results for several samples were rejected because the relative response factors (RRFs) were below 0.05 for the associated continuing calibration verifications (CCVs). Chromium and lead results for the field duplicate pair 11EXFLC1001 and 11EXFLC1002 were rejected as the relative percent differences (%RPDs) between the duplicate results were above 120%. All the other results are usable and sufficient to demonstrate the achievement of cleanup goals at SEAD-11.

All coolers were received with temperature below 6°C, within the limits specified by the USEPA Region II SOP HW-24 (i.e., 10°C) and the USEPA (1999) Contract Laboratory Program National Functional Guidelines for Organic Data Review (i.e., 4±2 °C).

The EPA Region 2 requires that low VOC samples be collected by encore samplers. To cover the potential medium to high level VOC concentrations at the site, the Seneca Generic Site-Wide Sampling and Analysis Plan (SAP) specifies that two Encore samples together with one jar sample will be collected at each location. For SEAD-11 confirmatory samples, each soil VOC sample was collected in two encore samplers and one jar sampler. All VOC encore samples were processed in the laboratory in accordance with the SW846 5035A. The ten soil samples in SDG A06-D871 were received by the laboratory after 48 hours from collection. As the SW846 5035A method requires sample storage/preparation within 48 hours, the VOC samples were resampled and grouped in SDG A06-E028 for VOC analysis.

Additional confirmatory samples were collected and analyzed for COCs for which the original sample failed. When the concentrations of COCs in a specific samples meet the specified cleanup goals, it is not necessary to collect and/or analyze additional samples to confirm that those COCs meet the cleanup goals at a sample located deeper or at a lateral distance from the original location, even if other COCs in the same original sample failed to meet their cleanup goals. Table 3-3 has been revised to include all data that met the cleanup goals, even if other COCs within a specific sample failed some of the cleanup goals (e.g., the VOC and metals data for sample 11EXFLB501, which exceeded the cleanup goal for cPAHs, will be added to Table 3-3).

Comment 11: Appendix H, Waste Manifests. Sheet 17 in Appendix H highlights in the comments section that Manifest No. 10714 appears twice on the manifest list, and the attached note indicates that there are two manifests with the same number. The Report does not discuss this issue, nor does it indicate how it was resolved. Revise the Report to include a discussion of this issue and how it was resolved.

Response 11: There were two unique manifests associated with two unique loads that mistakenly have the same manifest number. The note was added to the load-out log summary table to explain that 127 sequentially numbered manifests actually account for 128 loads. The paperwork mistake is unfortunate and every effort will be taken to avoid this in the future; no other action is required for SEAD-11 since all of the landfill material trucked off-site had a manifest associated with each truck load and was disposed of properly.

For your reference, the two manifests numbered #10714 are attached, and can be found on pages 1069 and 1070 of the PDF file of the Draft Completion Report for SEAD-11.

Army's Response to Comments from the New York State Department of Environmental Conservation

Subject: Draft Construction Completion Report for SEAD-11
Seneca Army Depot
Romulus, New York

Comments Dated: December 6, 2007

Date of Comment Response: February 13, 2008

Army's Response to Comments

GENERAL COMMENTS

Comment 1: Following the interim removal action (IRA) construction activities for SEAD-11, there are soils contiguous to the extent of the excavation with cPAHs (e.g., benzo(a)pyrene) above Part 375 Restricted Commercial Use Soil Cleanup Objectives (SCO). It is our position that if the restricted commercial use SCOs are exceeded, especially in multiple areas on the existing ground surface (where backfilling the landfill did not occur since the excavation returned the site its natural grade), further actions to protect public health and the environment are warranted. Based on the cPAH exceedances identified in the end-point soil confirmatory samples, residual contaminants continue to pose a threat to public health and the environment. We do not support the Army's conclusion that the threat posed by the landfill material has been removed. Therefore, we believe the Army's plan to prepare and submit a No Further Action Proposed Plan and Record of Decision is premature. It is requested that additional measures to remove or contain the residual contamination be conducted prior to future property transfer.

Throughout the Report, the Army discusses and compares analytical data to the State's guidance value of 10 ppm benzo(a)pyrene toxicity equivalence (BTE). As was discussed during the November 29, 2007 teleconference meeting, as well as in recent correspondence, there is currently no NYSDEC recommended screening level for BTE. The Army should reference the 10ppm BTE as a project-specific guidance value rather than as a general State guidance value to the guidance value from the text and tables of the report. From now on analytical data south of SEAD should be compared to the Restricted Commercial Use SCOs, which are consistent with the future intended use of the area as training.

Response 1: The Army disputes NYSDEC's and NYSDOH's claim that cPAHs concentrations remaining on-site indicate that further actions to protect public health and the environment are required. Based on the results of a risk assessment that the Army performed in accordance with USEPA protocols and procedures, the Army has demonstrated that there is no unacceptable level of risk under the training scenario due to the residual concentrations of chemicals, including cPAHs, that remain at the site. The results of this risk assessment were provided to NYSDEC, NYSDOH, and USEPA on October 4, 2007 as a technical memorandum that supplements the Construction Completion Report. It is the Army's contention that this risk assessment represents a valid alternative demonstration of potential site risks that

remain. Therefore, further actions to protect public health and the environment are not warranted. As such, no additional measures will be conducted at SEAD-11 by the Army.

The Army's designation of the 10 ppm BTE value as the cleanup goal for residual cPAH concentrations was based on requests contained in a letter issued by Joseph White, NYSDEC's representative assigned to the Seneca program at the time, which is dated January 26, 2004. In this letter, Mr. White directed the Army to use the BTE value as a cleanup goal for the interim removal action at SEAD-11. At the time that the Interim Removal Action (IRA) was proposed (Action Memorandum/Decision Document, Parsons, 2003), planned (IRA Work Plan, Parsons, 2006), and implemented (mobilization on October 30, 2006), the BTE values were cited as the guidance values that would be used to determine if the removal was complete for cPAHs contamination. The initial excavation, confirmatory sampling, and additional excavation and sampling to confirm that all soil remaining at the site met the specified cPAH cleanup goal (the 10 ppm BTE value) were completed by January 5, 2007.

If NSYDEC/NYSDOH required that the Army apply the new SCO values to SEAD-11, they should have indicated as much earlier in the process. Specifically, NSYDEC/NYSDOH could have issued this request in their comments dated September 29, 2006 on the Draft Interim Removal Action Work Plan (submitted August 7, 2006) and/or at a date prior to the commencement of the removal action; the NYSDEC and NYSDOH were informed of the mobilization date for the IRA in a letter submitted on October 18, 2006. In fact, NYSDEC's September 29, 2006 comment letter, which provided comments on the Draft Interim Removal Action Work Plan, included questions on the cleanup goals; however, the use of BTE as the cleanup goal for cPAHs was not questioned or brought into doubt by the NSYDEC representative at that time. The Army will agree to modify the text of the Final Completion Report to refer to BTE as a project-specific guidance value or cleanup goal.

With reference to the State's concerns about residual chemical levels left at SEAD-11 versus its Part 375 soil cleanup objectives (SCOs), the Army understands that New York currently uses the SCOs to assess the suitability of actions at all of its evaluated sites. However, Part 375 does not specify how the State assesses compliance with the SCOs. As we have discussed numerous times with State representatives during Base Cleanup Team meetings and in teleconferences, it is the Army's position that the level of a chemical found at a site is best represented as an average or some other statistically sound estimate of the dataset, rather than as individual points. As such, the Army has settled on assessing the potential importance and remaining risk associated with residual chemical levels found at a site using the 95th upper confidence limit of the mean (95th UCL). Further, the use of the 95th UCL is consistent with CERCLA risk assessments in which the reasonable maximum exposure to contaminants found at a site are assessed in a conservative manner.

The Army believes that its use of the 95th UCL of the mean for contaminants as the determinant value that is compared to the State's SCOs provides a more uniform assessment endpoint. If the 95th UCL value is below the State's SCOs, then compliance is attained. If the 95th UCL is above the SCO value, then additional actions may be warranted, and then the evaluation of point-by-point values to assess potential residual contaminants becomes more meaningful.

Further, it should be noted that such a comparison of residual chemical levels at SEAD-11 was presented in the Draft Construction Completion Report in Table 3-2 and Figure 3-2. These presentations indicated that the 95th UCL for all metals was below their respective Part 375 Unrestricted Use SCOs.

Table 3-2 and Figure 3-2 has been expanded to include VOCs, individual cPAHs, and metals in the Final SEAD-11 Construction Completion Report.

Review of these presentations shows that all of the individual metals and VOC concentrations detected in final confirmatory samples met the proposed cleanup goals or were similar to Seneca site-wide background concentrations, again demonstrating that all materials potentially posing a threat have been removed from the site. Furthermore, the 95th UCL for each VOC, cPAH, and metal is below NYSDEC's Unrestricted Use SCOs listed in Table 375-6.8(a), as shown in a revised Table 3-2 that will be submitted in the Final report, with the exceptions of benzo(b)fluoranthene and zinc. The 95th UCL for benzo(b)fluoranthene is 1,090 µg/kg, compared to the unrestricted SCO of 1,000 µg/kg. The 95th UCL is driven by an outlier with the maximum concentration of benzo(b)fluoranthene of 7,400 µg/kg. If that single sample were removed from the dataset, the 95th UCL would decrease dramatically to 694 µg/kg, which is below the unrestricted SCO of 1,000 µg/kg. The 95th UCL for zinc is 114 mg/kg, compared to the unrestricted SCO of 109 mg/kg, which is less than the SEDA background concentration of zinc, 126 mg/kg.

The Army implemented a removal action in accordance with the Work Plan. A graphical comparison of the 95th UCL values to the unrestricted SCOs (Figure 3-2) illustrates that the level of cleanup achieved the State's SCOs for Unrestricted Use and are well below the site specific cleanup goals established in the Work Plan. A risk assessment completed in accordance with EPA guidance, submitted in a memorandum on October 4, 2007, serves to document that chemicals remaining at SEAD-11 do not pose a risk. Therefore, no further action is warranted at SEAD-11 and the site is suitable for unrestricted use.

SPECIFIC COMMENTS

Comment 1: Section 2.6, Last line. To address Control of Run-On and Run-Off Water the Army stated "...the silt fencing will be removed once vegetation is established." Revise the document and address the resources who will do it.

Response 1: Vegetation has been reestablished at SEAD-11. The Army's engineer, Parsons, will provide field staff to remove the silt fencing. This information has been added to Section 5.2

Comment 2: Final Results, page 3-5. The text states the 95th upper confidence level (UCL) of the mean for each metal is below NYSDEC's Unrestricted Use Soil Cleanup Objectives. For a comparison of the data to the site's future intended use, it is recommended that the data (individual analyte concentrations) be compared to the State's Restricted Commercial Use SCOs.

Response 2: As noted in Response #1, the subject document includes a comparison of the data to the unrestricted SCOs, and generally achieves them. A table showing a comparison of NYSDEC's Restricted Commercial Use SCO to the final confirmatory data is included as an attachment to the responses (Table A-1), for your reference. Note that the recommended 95th UCL of the mean for each analyte is less than the Commercial SCO. This table will be included in the Proposed Plan and ROD for SEAD-11. The project specific guidance value, documented in the IRA Work Plan, used to determine that the soil is clean was the BTE value. As discussed in Response #1, analytes left in the soil at the site do not pose a risk. The issue of the data compare to NYSDEC's restricted Commercial SCOs can be addressed in the next phase of the CERCLA process, the Proposed Plan and the ROD.

Comment 3: Section 6.0. Conclusion – Revise the Report to allow for continued collection of quarterly sampling data for Groundwater until a final remedial decision is made for this area.

Response 3: The groundwater data demonstrates that groundwater at the site is within the range of background concentrations at the Depot and has not been impacted by site activities. Four rounds of sampling have been conducted at this site over the last 13 years: January 1994 (4 wells), November 2000 (7 wells), February, 2001 (7 wells) and February 2007 (7 wells). No NYSDEC GA Standards for VOCs, SVOCs, explosives, PCBs, herbicides or pesticides have been exceeded during any sampling event. The metals concentrations in groundwater have been consistent with the background data set. TCE and PCE have been detected at concentrations lower than the MCLs. Since only very low concentrations of TCE and PCE were detected in the confirmatory soil samples and the groundwater shows no exceedances currently, there is no source for groundwater levels to increase above MCLs. Therefore, it is the Army's position that no further groundwater sampling is warranted at this site.

Comment 4: The Completion Report states that the Cleanup Goals were met – see Table 3-3 Page 5/20 for cPAH which shows that goals were exceeded. Please explain.

Response 4: The discussion in the report bases the achievement of cleanup goals on meeting the 10 ppm BaP BTE value. The concentrations measured at all sample locations representative of soil remaining at the site were less than the 10 ppm BTE value, including the data shown on page 5/20 of Table 3-3. The 95th UCL of the mean for each contaminant is less than the Commercial SCOs, shown in the attached Table A-1.

Table A-1
Summary of SEAD-11 Detected Analytes Compared to NYSDEC's Restricted Commercial SCOs

Parameter ¹	Units	Maximum Concentration	Frequency of Detection	NYS Commercial Use Value ²	Number of Exceedances	Number of Detections	Number of Samples Analyses ³	95th UCL Recommended Value ⁴	95th Exceed Criteria Value
Volatile Organic Compounds									
Acetone	UG/KG	67	2%	500000	0	2	106	22	No
Cis-1,2-Dichloroethene	UG/KG	2	1%	500000	0	1	114	2	No

NOTES:

1. Detected parameters are presented in this table.
2. NYSDEC Restricted Commercial Use Soil Cleanup Objective, Table 375-6.8(b), under Subpart 375-6: Remedial Program Soil Cleanup Objectives.
3. Sample-duplicate pairs were averaged and the average results were used in the summary statistics presented in this table.
4. 95th Upper Confidence Limit was calculated from USEPA program, ProUCL Ver 4.0, <http://www.epa.gov/esd/tsc/download.htm>
5. The maximum detected concentration was obtained from the average of the sample and its duplicate.
6. Bolded 95th values represent a calculated 95th UCL value that is greater than maximum value detected in samples.
7. Shaded cells represent the maximum detected concentration in place of the 95th UCL due to limited detected sample size.
